PRESENTED TO
SJVN Limited

Acknowledgement

This Impact Assessment Report is the result of extensive consultation and collaboration with Ms. Geeta Kapur Director (Personnel), Mr. Awadhesh Prasad, General Manager, (CSR), and other officials of the CSR Section of SJVN. The impact assessment team also spoke with implementing agencies and beneficiaries in each of the five states where SJVN has implemented CSR projects: Himachal Pradesh, Bihar, Maharashtra, Uttarakhand, and Gujarat.

This impact assessment exercise would not be possible without the assistance of kind-hearted individuals who have volunteered their assistance for the successful completion of this undertaking. We would like to thank the agencies responsible for implementing SJVN's CSR initiatives for providing support to impact assessment team with necessary documentation and assistance to complete the study successfully.

We are also very appreciative to all the stakeholders for donating their valuable time and providing inputs and information that have made this assessment so insightful.

October 2022

Preface

This is an Impact Assessment Report for six CSR initiatives funded by SJVN Ltd and implemented in the states of Himachal Pradesh, Maharashtra, Bihar, Gujarat, and Uttarakhand.

This report provides a brief overview of SJVN Ltd., its CSR policy, and its goals. In addition, it provides brief descriptions of each project and project site profiles. This Impact Assessment Report is based on the OECD framework for Impact Assessment, as well as SR Asia's comprehensive methodology and extensive research.

The evaluation includes stakeholder consultation, desk research, online and offline questionnaires, field visits with local investigators, and a participatory methodology. Using a mixed-methods approach, quantitative and qualitative data are collected using ZOHO analytics. As a result success stories are also evolved and reported.

The impact of CSR initiatives, as detailed in the ToR Document were carried out meticulously by the investigating team and has been outlined justifiably.

The conclusions and next steps are intervention-specific and incorporate lessons that can be applied to future endeavors.

Impact Assessment Team

The evaluation team consisted of subject matter experts, experienced CSR professionals from Public Sector Enterprises, social scientists, environmentalists, health professionals, and energy experts in the renewable energy domain, among others.

EXECUTIVE SUMMARY

The Impact assessment is conducted in accordance with the scope of work and terms of reference (ToR) outlined by SJVN for all completed CSR Programs/Projects/Activities with a value of Rs.100.00 lakh or more and in accordance with MCA, Notification dated 22-Jan-2021 Companies Amendment Rules, 2021 (Rule 8.3) listed in Annexure-4 of LOA dated 14-Apr-2022 is to be implemented in the year prior. The purpose of this study was to evaluate the impact of SJVN Ltd's CSR initiatives at various project sites in five Indian states. This impact report is the result of secondary research and extensive fieldwork conducted at project sites in Himachal Pradesh, Bihar (Buxar), Uttarakhand (Uttarkashi and Chamoli), Maharashtra (Nasik and Ahmadnagar) and Gujarat (Patan and Sundarnagar).

Impact Assessments for SJVN's CSR initiatives were conducted at CSR Project sites by a team of trained and qualified investigators. Throughout the process, implementation agencies were contacted and consulted to obtain the necessary information and gain access to the beneficiaries. The Impact Assessment team consulted with project beneficiaries in order to conduct a thorough examination of the schemes and the various benefits received.

Residents of the project areas benefited from the CSR initiatives. On a scale from 1 to 5, the satisfaction level of recipients is greater than 4.0. SJVN's CSR initiatives have proven indispensable and complementary to the enhancement of the quality of life in project-affected regions. Affected parties have expressed an interest in the project's continuation.

The assessment report format has an introduction, funding details, infrastructural details, observations and impacts, beneficiaries' feedback, and pictures from the field for each initiative along with tables and figures to support the necessary for each of the initiatives. This impact assessment report has multiple thematic CSR projects such as education, infrastructure and healthcare. This study covers six CSR projects having a project cost value of Rs.100 Lakh and more and brief details of the same are as follow.

SJVN's initiative in the education sector involved the construction of buildings for [ITI- Bilaspur](#) and [ITI- Una](#) in Himachal Pradesh. The addition of a new building to the institute's grounds has opened many doors for aspirant students from the surrounding area who wished to enroll in a new type of course. In ITI Bilaspur and Una, respectively, two and five courses had been initiated following the construction of a new building.

The added infrastructure enables the institute's administrators to introduce more courses and accept more students. In addition to being useful for new admissions, the building provides space for additional classes, as well as more machines and scientific equipment. The financial assistance provided by SJVN was utilized effectively in construction of the buildings, and all parties involved are pleased with this endeavor.

[The SJVN Silver Jubilee Scholarship](#), which began in 2012 and continues to this day across five states, is a one-of-a-kind programme that encourages students in project-affected areas to pursue higher education. Scholarships are awarded to meritorious students regardless of social creed and class. Each student was given Rs. 24,000 per annum to support and promote higher education. This programme cultivates a scientific mindset for academics and competitive examinations.

The [construction of a Hostel in Saraswati Vidhya Mandir- Vikasnagar, Shimla \(HP\)](#), has increased the new building's capacity for students by 150. This initiative to build dormitories has aided the school's educational efforts by creating a conducive environment for studying. A green building concept and design were utilized in the construction of the hostel building. The dormitory has sufficient space to house all students enrolled in the current academic year and to admit additional students in future.

SJVN's initiative towards the [Swachh Bharat Mission](#) is the [installation of 23,000 twin-set dustbins in the two Parliamentary Constituencies of Shimla and Mandi of HP](#). The purpose of the CSR programme is to educate the general public about waste and waste management. According to the responses of the area's direct and indirect beneficiaries, the twin set dustbin

were placed in designated areas, institutions, and places of frequent use. The initiative aimed to reduce littering in public and institutional areas, and as a result, the Impact Assessment team made a concerted effort to visit and meet with the public at large in order to evaluate the facility's impact and the public's response to its use. Due to extreme weather conditions, road widening, and construction activities, it was observed that garbage bins in public areas were scarce. People also reported that as a result of the heavy precipitation, hail storms, and snowfall in the area, the Twin set dustbin have been damaged. The investigating team enquired about the missing dustbins and it was reported by the locals that a few were taken by local people for personal usage. In contrast, in institutional areas Twin set dustbin are intact and rarely used. Overall, the installation of waste receptacles has increased people's awareness of waste management; however, the design of waste receptacles was not suitable for handling wet waste. In addition, no provisions were made for waste cleaning, collection, and disposal.

A total of 500 [Ayurvedic health awareness camps](#) were organised in FY 2019-20 in multiple locations to educate the public on the benefits of a natural way of living. Bhartiya Dharohar organized the Ayurvedic camps at project and non-project locations. The campaign included information about Ayurveda and raising awareness among people of all ages about an Ayurvedic and natural way of life. With this initiative, the people's minds had been impacted, and the younger generation had been positively influenced in regards to our advanced ancient science and living practices.

Overall beneficiary and stakeholder satisfaction with the number of projects assessed and covered in this report is greater than satisfactory, and areas for improvement and feedback received during field visits and consultation meetings have been summarized alongside each project's assessment.

CHAPTER I

IMPACT ASSESSMENT

1. Introduction

Impact Assessment aims to enhance the effectiveness, efficiency, fairness, and sustainability of service delivery, outcomes, and impacts of any programmes. The process involves identifying and characterizing the most likely impacts of proposed actions (impact/prediction/forecasting) & evaluating the social significance of those impacts.

Overall, the CSR projects implemented by SJVN are in line with ¹Schedule VII of the Companies Act 2013. The CSR Policy of SJVN is also in line with the Companies Act 2013. This is well defined in view of the National Policy, CSR Policy, needs and aspirations of the people, and areas where they operate. These projects had a positive impact on the life of project-affected people.

In order to determine the degree of success or failure of the CSR initiatives, the impact is evaluated and compared to the benchmarks established during planning. Team used the ZOHO survey tool to conduct and monitor the survey in real-time. Systematically, photographic and videographic records of the progress, accomplishments, and effects are maintained. In addition to noting the fieldwork observations, the assessment team prepared case studies in accordance with the standard operating procedure. To ensure the achievement of long-term objectives, the team conducted stakeholder consultations with implementing partners, local representatives, and other line departments to learn more about the projects, their impact, and sustainability strategy. SR Asia has utilized the OECD DAC framework to evaluate the impact of SJVN's CSR projects. It assigns a score to each of the investigated projects based on their relevance, effectiveness, impact, coherence, efficiency, and sustainability.

1.2 About Impact Assessment Agency

Social Responsibility Asia (SR Asia) is an ISO 9001: 2015 Certified international non-profit

¹[https://www.mca.gov.in/content/mca/global/en/acts-](https://www.mca.gov.in/content/mca/global/en/acts-rules/ebooks/acts.html?act=NTk2MQ==#Schedule_VII_Activities_Which_May_be_Included_by_Companies_in_their_Corporate_Social_R)

[rules/ebooks/acts.html?act=NTk2MQ==#Schedule_VII_Activities_Which_May_be_Included_by_Companies_in_their_Corporate_Social_R](https://www.mca.gov.in/content/mca/global/en/acts-rules/ebooks/acts.html?act=NTk2MQ==#Schedule_VII_Activities_Which_May_be_Included_by_Companies_in_their_Corporate_Social_R)
[esponsibility_Policies](https://www.mca.gov.in/content/mca/global/en/acts-rules/ebooks/acts.html?act=NTk2MQ==#Schedule_VII_Activities_Which_May_be_Included_by_Companies_in_their_Corporate_Social_R)

organization registered with Ministry of Corporate Affairs (MCA) New Delhi, India in the year 2012, and has legal entities in Bangladesh and Indonesia. SR Asia has country representative offices in Mongolia, Malaysia, Philippines and Vietnam. SR Asia is an affiliate to Asian Productivity Organization (APO) Japan and also works closely with APO member National Productivity Organization in complementing and promoting CSR, Sustainability and Sustainable Development.

SR Asia's mission is to conserve natural resources for the welfare of current and future generations by promoting change. SR Asia wants to work with all stakeholders to create awareness among consumers and manufacturers. We want to reach out to consumers through campaigns and work with companies in the design, development, and production of sustainable goods and services.

1.3 Scope of work as per ToR

The impact assessment will be a learning document for SJVN to introspect on both its goal and achievement in implementation of CSR programs and suggests steps for its better implementation document will be used by SJVN for both internal and external purposes. The study covers the following:

Impact assessment of all completed CSR Programs/Projects/Activities having value of Rs.100.00 lakh or more as per Annexure-4 of LOA. Also, at least four-five success stories of each project along with relevant photographs will be incorporated.

Studies to be included

1. Providing of financial support to ITI, Barthin, Bilaspur (HP)
2. Providing of financial support to ITI, Bangana, Una (HP)
3. Construction of hostel building at Saraswati Vidya Mandir, Vikasnagar (HP)
4. Installation of 23,000/-sets of dustbins (110-liter Capacity) in Shimla and Mandi Parliamentary Constituencies of HP under Swachh Bharat Abhiyan.
5. SJVN Silver Jubilee Merit Scholarship Scheme (2015)
6. Organizing of Ayurvedic Health camps through Bhartiya Dharohar

CHAPTER II

About SJVN Limited

2.1 Introduction

SJVN Limited, a Mini Ratna, Category-I and Schedule – ‘A’ CPSE under the administrative control of Ministry of Power, Govt. of India, was incorporated on May 24, 1988, as a joint venture of the Government of India (GOI) and the Government of Himachal Pradesh (GOHP). Beginning with a single project and single State operation (i.e., India's largest 1500 MW Nathpa Jhakri Hydro Power Station in Himachal Pradesh) the Company has commissioned five projects totaling 2091.5 MW of installed capacity including wind and solar power.

SJVN is presently implementing power projects in Himachal Pradesh, Uttarakhand, Bihar, Maharashtra and Gujarat in India besides neighboring countries viz. Nepal and Bhutan. SJVN envisions a best-in-class Indian Power Company, globally admired for developing affordable clean power and sustainable value to all stakeholders. SJVN's CSR initiatives are based on the notion that a business cannot prosper unless the society in which it operates also develops. The principles that guide the organization's CSR attitude are government directives, Millennium Development Goals (MDG's), the human rights perspective, and the national agenda.

Vision

To be the best-in-class Indian power company, globally admired for developing affordable clean power and sustainable value to all stakeholders.

Mission

To drive socio-economic growth and optimize shareholders and stakeholders interest by:

- Developing and operating projects in cost effective and socio-environment friendly manner.
- Nurturing human resources talent with care.

- Adopting innovative practices for technological excellence.
- Focusing on continuous growth and diversification.

Objectives

In the pursuit of above mission, the company had set for itself the following corporate objectives:

- Operating and maintaining power stations with maximum performance efficiency.
- Establishing and following sound business, financial and regulatory policies.
- Taking up of other hydro power projects.
- Completion of the new projects allocated to SJVN in an efficient and cost effective manner.
- Use of the best project management practices for the project implementation by applying latest universally accepted Project Management Techniques, and by enabling its Engineers, to become certified Project Managers through further trainings.
- Dissemination of available in-house technical and managerial expertise to other utilities / projects.
- Creating work culture and work environment conducive to the growth and development of both the organization and the individuals through introduction of participative management philosophy.
- Fulfilling social commitments to the society. Achieving constructive cooperation and building personal relations with stakeholders, peers, and other related organization.
- Striving clean and green project environment with minimal ecological and social disturbances.
- To strive for acquiring Navratna Status.

2.2 SJVN's CSR Vision & Mission

SJVN's CSR Vision

To make people and earth partners in our growth.

SJVN's CSR Mission

SJVN is pledged to fulfill its social and environmental commitments; because we know that our growth is meaningful when we share it with society.

The CSR and Sustainability Policy of SJVN has been evolved based on CSR and Sustainability guidelines issued from time to time by the Ministry of Heavy Industries and Public Enterprises and the Companies (Corporate Social Responsibility Policy) Rules 2014 notified by Ministry of Corporate Affairs in pursuance to the Companies Act, 2013 and various amendments/clarifications notified from time to time. In case of any contradiction between this policy and provisions of the Companies Act, the later shall prevail.

2.3 SJVN's CSR and Sustainability Policy Statement and Objective

SJVN is dedicated to its stakeholders' concerns and seeks to uphold high standards of Corporate Social Responsibility (CSR) and Sustainability in its operations. To accomplish this commitment, SJVN will uphold the rule of law, local communities, and society at large, and will implement its CSR and Sustainability programs to make intentional efforts to improve quality of life and environmental sustainability through its CSR and Sustainability programmes.

2.4 SJVN's Approach for CSR and Sustainability

Power projects are located in far reaches of isolated regions which are scarce in infrastructural facilities and where the populace is socio-economically backward. SJVN being a responsible corporate citizen strives to bring about overall positive impact on societies living in such regions. Besides, its CSR and Sustainability activities, SJVN will also cover a wide range of issues relevant to the larger society that could have a lasting impact.

SJVN is committed to utilising green technology, processes, and standards to produce products that contribute to social and environmental sustainability. CSR programmes in SJVN shall not supplement R&R activities. Additional CSR activities shall not include those conducted as part of SJVN's regular business operations.

CHAPTER III

Research Methodology

3.1 Introduction

This chapter provides a concise introduction to the study, its justification, its objective, survey questions, sampling, data collection, and limitations. In order to provide a rationale and context for the study's findings, it is necessary to have an in-depth understanding of the research methodology employed.

3.2 Objectives of Impact Assessment

The purpose of this study is to evaluate the socioeconomic impact of SJVN Limited's CSR initiatives. The purpose of this study is to assess the impact and sustainability of the projects being implemented, as well as to identify the project's strengths, weaknesses, and deficiencies, as well as the benefits received by the targeted groups, so that its impact can be measured and lessons learned can be applied to future CSR project designs and implementation. Among the primary goals are the following:

- To assess the socio-economic impact of health and hygiene programs.
- To assess the socio-economic impact of education and skill development programs.
- To assess the socio-economic impact of social welfare measures provided for senior citizens, children and other sections of the society and women empowerment etc.
- To assess the socio- economic impact of the CSR initiatives undertaken in the areas of preservation and promotion of culture and sports.
- To assess the socio-economic impact of infrastructure and community development programs.
- To assess the socio-economic impact of sustainable development programs carried out by SJVN.

- To assess the socio-economic impact of the CSR initiatives undertaken in the areas of natural disaster and COVID-19 related activities carried out by SJVN.

3.3 Impact Assessment Approach of SR Asia

SR Asia is committed to providing an exceptional client experience to all of its partners. Our objective is to provide greater value by adhering to a standard set of practices. According to our understanding, the purpose of this CSR assessment is to conduct a socio-economic impact assessment of SJVN's CSR initiatives.

A comprehensive analysis of all socioeconomic benefits accrued by beneficiaries was conducted using a holistic approach to the current project. Below is a description of our strategic approach, which is a combination of technical and sectoral expertise, connected thinking to leverage SR Asia's network, and a participatory approach that brings together all stakeholders for a holistic assessment.

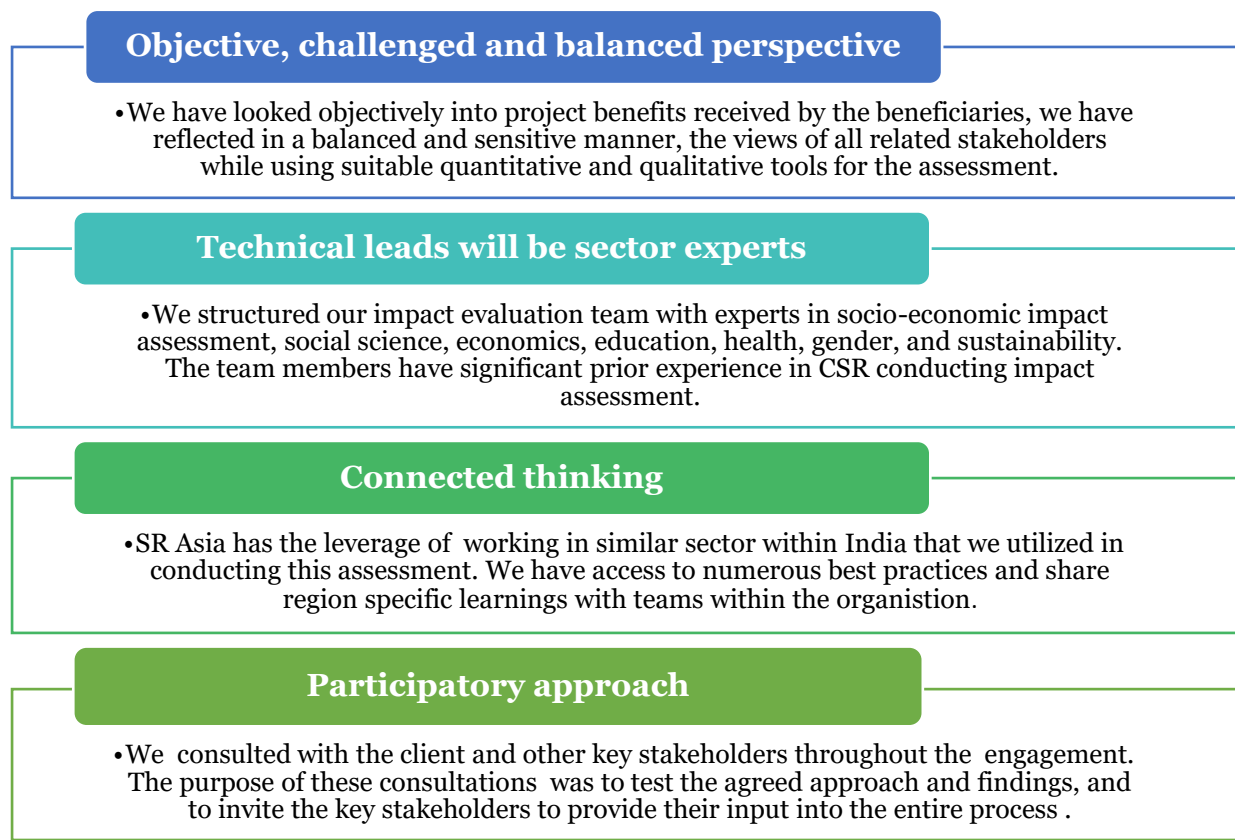

Figure 1 Holistic approach by SR Asia

3.3.1 Assignment Execution through 5 P Approach

SR Asia has adopted 5-P approach to the present impact assessment which is detailed below. The 5- P approach is comprehensive in nature and helps outline key steps to be followed at different stages of the project life cycle. The team initiated the engagement with detailed research of all project documentation, which helped the team gather a deeper understanding of the activities carried out under the project.

We prepared a stakeholder engagement map to identify all project related stakeholders and their ability to influence the outcomes of CSR activities. This led to the development of indicators and research questions pertinent the project with a focus to isolate the direct and indirect impacts on the lives of beneficiaries.

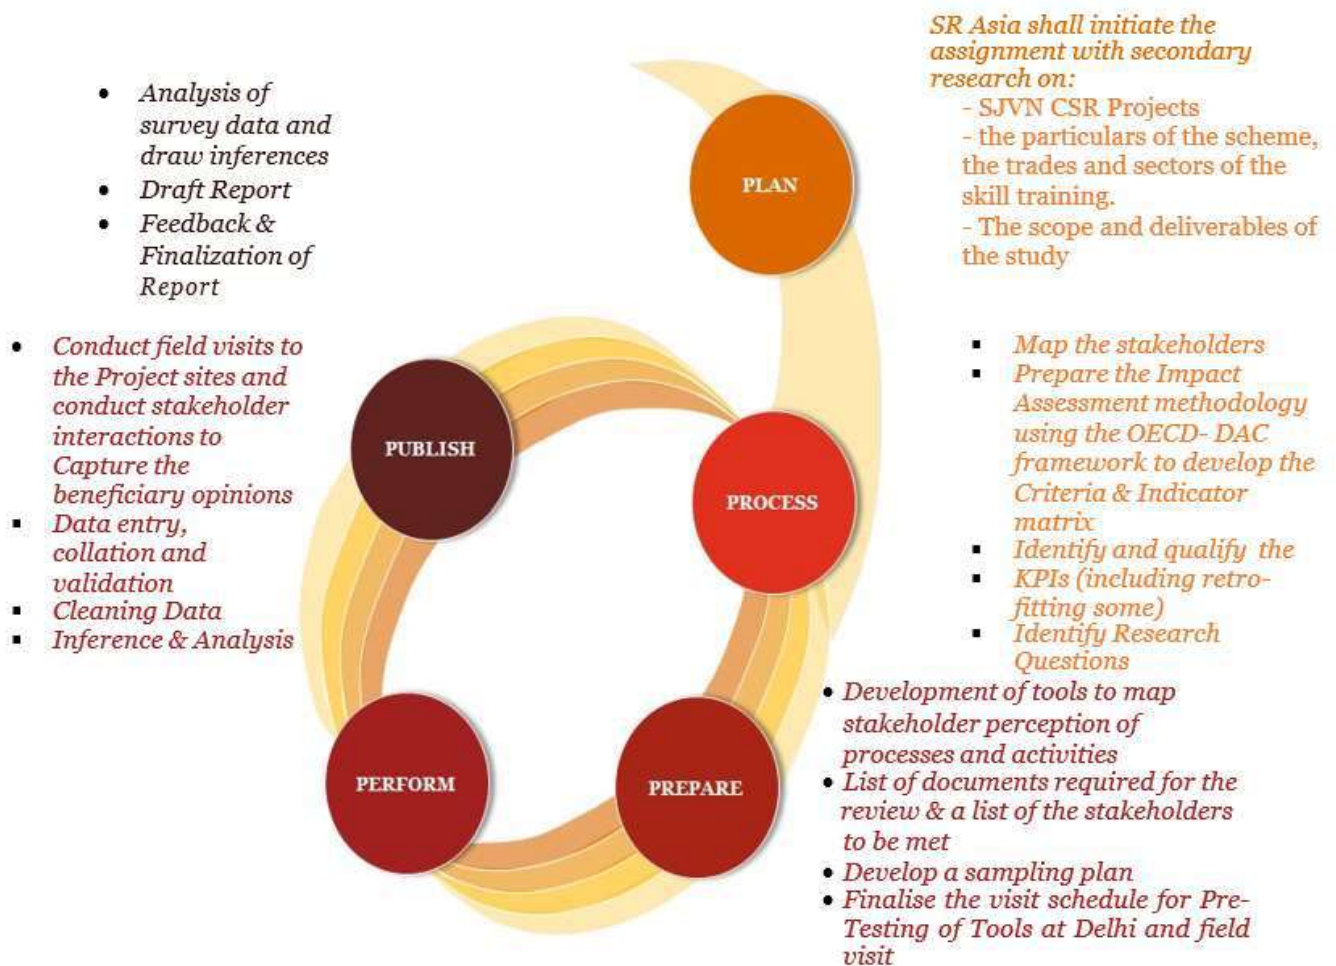

Figure 2 5-P Approach by SR Asia

Based on the 5-P approach, SR Asia has used its process evaluation framework to help SJVN measure and report on the impacts of its CSR projects and activities along with engaging with all the involved stakeholders to holistically assess the impact created by the CSR initiatives.

The SR Asia team was built considering the geographical diversity and spread of the project. Different teams and team leaders were recruited for data collection in each of the states where the SJVN projects sites are located. Apart from that, since the SJVN headquarters is located in Shimla, a station office of SR Asia impact assessment team was also set up in Shimla where the project director and research associates stayed for a month. This helped the impact assessment team to coordinate with SJVN CHQ and understand client expectations throughout the process.

3.4 Methodology

An exploratory study was conducted to comprehend the nature, design, and facets of implemented projects that require impact assessment. This was primarily accomplished through desk study. In order to gain a comprehensive understanding of the areas and objectives, parameters, goals, structure, and sustainability criteria of the implemented CSR project, multiple sources are consulted.

- The literature reviews of secondary data and literature available such as SJVN website, baseline reports, sample monitoring and evaluation report, implementation agencies, beneficiary data and CSR Annual Reports of SJVN, media reports etc.
- Preparation of data collection tools, preparation of survey questionnaires (computer and internet enabled), training of field investigators, pilot testing of tools, and data collection on site etc.
- The assessment process which involves segregation of data and data analysis, evaluation, or comparison with the planned guidelines and the standards available.

Figure 3 Methodology

3.4.1 OECD DAC Framework for measuring sustainability

The Organization for Economic Co-operation and Development (OECD) Development Assistance Committee (DAC) first laid out the evaluation criteria (relevance, coherence effectiveness, efficiency, impact, and sustainability) in 1991. These six criteria serve as the core reference for evaluating international development and humanitarian projects, programs, and policies. These evaluation criteria have been defined below:

²Source: oecd.org

Figure 4 Six criteria of OECD DAC Framework

² OECD.(2022)

<https://www.oecd.org/dac/evaluation/daccriteriaforevaluatingdevelopmentassistance.html>

- **Relevance:** The extent to which the intervention objectives and design respond to beneficiaries' needs, policies, and priorities, and continue to do so if circumstances change.
- **Coherence:** the extent to which other interventions (particularly policies) support or undermine the intervention, and vice versa. Includes internal coherence and external coherence.
- **Effectiveness:** The extent to which the intervention achieved, or is expected to achieve, its objectives, and its results, including any differential results across groups.
- **Efficiency:** The extent to which the intervention delivers, or is likely to deliver, results in an economic and timely way.
- **Impact:** The extent to which the intervention has generated or is expected to generate significant positive or negative, intended, or unintended, higher-level effects.
- **Sustainability:** The extent to which the net benefits of the intervention continue or are likely to continue.

The IA team has identified some key parameters and components as necessary to apply this framework to this study, and they are indicated in table.

OECD DAC Framework		
What is it? Framework for evaluating performance of social development programs on relevance, effectiveness, convergence, and sustainability aspects	How it helps? Helps in gaining qualitative understanding of the impact created, stakeholder perception, extent of collaboration with other actors and sustenance of the change	
Evaluation Criteria	Indicative questions	Key Performance Indicator
Inclusiveness	<i>To what extent do beneficiaries from all backgrounds get covered by the program?</i>	<i>Program included beneficiaries from all backgrounds, without any discrimination</i>
Relevance	<i>To what extent does the program have the capacity to meet the needs and expectations of society? To what extent does the program have the potential to facilitate participation from the community and local government in creating sustainable impact?</i>	<i>Program aligned to the needs and expectations of society and involved adequate engagement / participation from the community, linkage with SDGs, etc.</i>
Effectiveness	<i>To what extent has the program been able to create an impact on HDI profile of beneficiaries?</i>	<i>Program has significant impact on health and wellbeing status of beneficiaries, etc.</i>
Convergence	<i>To what extent does the program have the potential to link beneficiaries to government program / schemes, etc.?</i>	<i>Program involves collaboration with government or other non-government organization operating in program area</i>
Sustainability	<i>To what extent does the program have the potential to create a sustainable impact post withdrawal of REC's support?</i>	<i>Enhancement of local community/ institution skills to govern and manage programs, linkages with government/</i>

Figure 5 Criteria of OECD DAC Framework and its components

Weighted scores were used to develop a 6-point scale. Following criteria is applied while rating the sustainability score of CSR project impact assessment.

Table 1 6-Point scale for scoring the CSR project

Rate	Qualitative assessment based on each evaluation criteria	Quantitative measurement based on the logical framework
6. Highly satisfactory	A project with overwhelmingly positive results and no shortcomings.	Level of achievement presents no shortcomings (90% - 100% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
5. Satisfactory	A project with some strong results and without material shortcomings.	Level of achievement presents minor shortcomings (70% - 89% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
4. Moderately Satisfactory	A project with a clear preponderance of positive results (i.e. it may exhibit some minor shortcomings though these should be clearly outweighed by positive aspects).	Level of achievement presents moderate shortcomings (50% - 69% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
3. Moderately Unsatisfactory	A project with either minor shortcomings across the board, or an egregious shortcoming in one criterion that outweighs other generally positive results.	Level of achievement presents some significant shortcomings (30% - 49% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
2. Unsatisfactory	A project with major shortcomings clearly outweighing positive results.	Level of achievement presents major shortcomings (10% - 29% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
1. Highly Unsatisfactory	A project with severe shortcomings and no material redeeming positive results.	Level of achievement presents severe shortcomings (0% - 9% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).

3.5 Research Instruments

For a comprehensive approach to data collection and stakeholder consultation, a mixed-methods research design was implemented. Utilized were both qualitative and quantitative research methods. Quantitative methods, such as survey questionnaires, were exhaustive and covered the minimum number of samples required by the research standards. The use of qualitative research methods centered on public consultation and in-depth engagement with project beneficiaries. After collecting data, it was processed for analysis using the ZOHO survey analysis tool, MS Excel, and SPSS.

3.6 Data Collection

The following approach was adopted for the collection of primary and secondary data.

Primary Data:

On-site collection of primary data was conducted via offline and online methods (ZOHO questionnaire, beneficiary interviews, focused group discussions, and in-depth interviews). In addition, geo-tagged photographs and short videos were produced.

Secondary Data:

This involves literature review of SJVN website, baseline reports, sample monitoring and evaluation report, implementation agencies, beneficiary data and CSR Annual Reports of SJVN, media reports etc.

3.6.1 Sampling and sample size

In each SJVN project site, a random sample of project beneficiaries was selected for this study using a sampling technique known as random sampling. Thirty percent of all project beneficiaries were included in the data collection. While a random sampling method was used, special consideration was given to the gender dimension, and both male and female study participants were selected.

3.6.2 Data Collection tools

- **Survey Questionnaire:**

An intensive questionnaire (as per the requirement of project) to assess the impact of projects upon villager's lives was developed. A significant number of responses were recorded to collect

quality data for each project. ZOHO survey tool was used to facilitate online and offline data collection depending on internet connectivity in the areas. Procedure for conducting survey was as follows:

1. Participants were identified by the method of random sampling as per the inclusion criteria.
 2. The participants were made comfortable and briefed about the purpose of the survey and in the process their consent was obtained.
 3. The responses were recorded by the investigator manually.
 4. Debriefing was done after the completion of the questionnaire
- Stakeholder consultation:

For the evaluation of each project, consultations with stakeholders were held. Participants in this activity included local residents, public representatives, representatives of implementing agencies, and local administration. During consultation with stakeholders, the impact assessment team ensured that women and men participated in equal numbers.

- Semi structured interviews:

Interviews with a semi-structured format were conducted to gather information regarding the benefits of the implemented projects.

- Observations during fieldwork:

The surveyors walked through the project areas/village/streets to verify the project's physical integrity and functionality.

3.6.3 Data analysis tool

As a data analysis tool, automated ZOHO analytics and Microsoft Excel were used to analyze the primary data collected during the survey. This tool is used to analyze all objective inputs, while subjective responses are using semantic analysis techniques.

3.7 Ethical Considerations

The study followed the research principle of informed consent. The study's purpose was communicated to respondents and key stakeholders. All respondents were assured the interview's confidentiality. They could skip any survey or interview question.

3.8 Project Management - Planning and Execution of Impact Assessment (PEIA)

Consult with SJVN project site officials, implementing agencies, and impact assessment team to plan field work. Impact Assessment has a SOP, checklists, and forms & formats. PEIA SoP details:

3.8.1 Checklist for Impact Assessment study

Stage 1: Schedule, Survey preparation, and training 1. Field visit schedule. 2. Preparation of survey questionnaire and preparation of ZOHO link. 3. Training and briefing of investigators. 4. Defining role and responsibilities. 5. Preparation of format for daily report	Stage 2: Collection of Documents and Material Needed before going to field 1.Representation letter from SR Asia. 2.ToR for investigators. 3.ID for all investigators. 4.Project details. 5.Survey Questionnaire link. 6.Feedback Form. 7.Other data collection formats. 8.Smartphone. 9.Diary and pen.
Stage 4: Data Analysis and Report Writing 1. Preparation of graphs and pie charts. 2. Preparation of success stories and case studies.	Stage 3- During Field visit 1. Meeting with Nodal officer of implementing agencies. 2. Meeting with stakeholders. 3. Verification of activities. 4. Conducting survey of beneficiaries.

3. Drafting and proofreading of the report.	5. Case Studies and success stories.
4. Review from impact assessment experts.	6. Geo-tagged photographs.
	7. Short videos of beneficiaries.
	8. Photographs and videos of field visit.
	9. Preparation and submission of daily progress report.

IMPACT ASSESSMENT OF CSR PROJECTS FY 2020-21

9	Data Organization and Transcription: Exporting data from ZOHO to spreadsheets, transcription of qualitative data.												
10	Data Cleaning: Data cleaning to remove the anomalies in the dataset using cross-verification.												
11	Data Analysis: Data analysis through spreadsheets, statistical tools, and content analysis.												
12	Draft Report Submission: Preparation of draft report and submission to client.												
13	Feedback from SJVN: Receiving feedback from SJVN on draft report.												
14	Final Report Submission: Preparation and submission of final report taking into account inputs and feedback from SJVN.												

Table 2 Impact Assessment timeline

CHAPTER IV

CSR Project 1: Providing Financial support to ITI, Berthin, Bilaspur (HP)

Project Proponent:	SJVN Limited
Assessment Year:	2020-21
Starting Year:	2012
Completion Year:	2019
State:	Himachal Pradesh
Activities:	Construction of additional building for ITI, Berthin, Bilaspur (HP)
Total Expenditure:	Rs. 100 Lakh

4.1 About ITI Berthin, Bilaspur

In 2000, the Industrial Training Institute (ITI) Berthin, Bilaspur, was established. It is one of the 103 government ITIs established by the Government of Himachal Pradesh, Department of Technical Education, Vocational and Industrial Training. The institute provides a variety of courses, such as welding, tailoring, dressmaking, COPA, electrical, electronic, and mechanical. The minimum requirement for admission to an ITI is a 10th pass out. The institute currently employs 18 people, 10 of whom are teaching staff and 8 of whom are non-teaching staff.

4.2 About the Project

ITI Berthin was facing a lack of space for accommodating more courses and students. In light of the problem, SJVN decided to adopt the ITI to facilitate its expansion. The company provided financial support of Rs. 100 lakh under its CSR initiatives for construction of an additional building in the premises. The new two-storey building has a theory and practical classrooms for fitters and computers trade, with a library and separate washrooms for boys and girls students. The funding was sanctioned and disbursed in the year 2012 by SJVN and the construction of the building started in 2012 and got completed in the year 2019.

Project Location	Financial Year 2012-2013	Total Expenditure INR (in lakh)
ITI Berthin, Bilaspur	Financial support of Rs. 100 Lakh was provided by SJVN as one time support	100

	Theory rooms	2
	Lecture hall	2
	Library	1
	Washroom	2

Table 4 Infrastructure details of ITI Berthin

4.4 Socio Economic profile of beneficiaries

ITI Berthin has a total strength of 150 students at present, out of which 53 are girls and 97 are boys. The percentage of female and male of the beneficiary students are shown in the following diagram.

Source: ITI, Berthin, Bilaspur through investigating team SR Asia

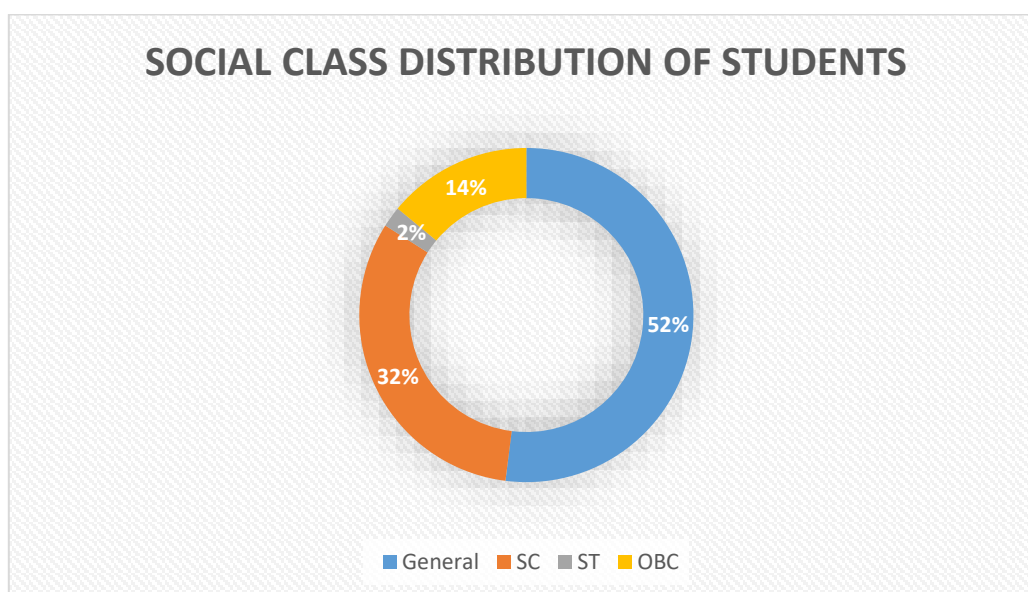

Figure 6 Percentage of male and female student beneficiaries

The distribution of students according to a social category is shown in the following table. The table shows that more than half of the students enrolled in the ITI are from the general category and other students belong to SC and OBC categories, while only 3 students are from ST.

Table 5 Distribution of students according to a social category

Social Category	No. of Students	Percentage
General	78	52%
SC	48	32%
OBC	21	14%
ST	3	2%

Figure 7 Percentage of students according to social category

52% of the students belong general category, 32% belong to SC category, 14% of the students belong to OBC category and 2% of the students belong to ST category.

4.5 Placement details of students

ITI, Berthin has a placement committee in the institute which helps in preparing the students for the interviews and set up the students for placement thorough campus. The institute have been giving focus towards preparing the students towards venturing into the professional world.

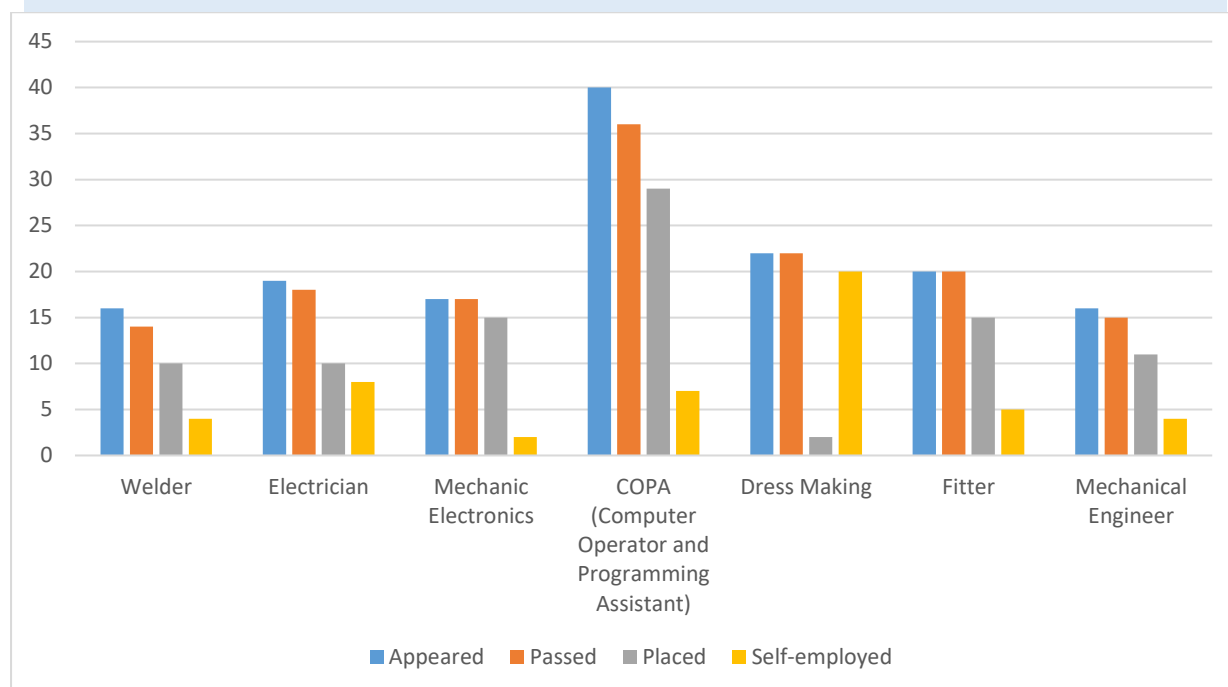

The placement details of the students passed out in the year 2020 are given below.

Table 6 Placement details of the students passed out in the year 2020

Name Of Trade	No. of Trainees						
	Appeared	Passed	%	Placed	%	Self-employed	%
Welder	16	14	87.5	10	62.5	4	25
Electrician	19	18	94.73	10	52.63	8	42.1
Mechanic Electronics	17	17	100	15	88.23	2	11.77
COPA (Computer Operator and Programming Assistant)	40	36	90	29	72.5	7	27.5
Dress Making	22	22	100	2	9.09	20	90.91

Fitter	20	20	100	15	75	5	25
Mechanical Engineer	16	15	93.75	11	68.75	4	25

Source: Placement cell ITI, Berthin, Bilaspur through investigating team SR Asia

Figure 8 Placement details of the students passed out in 2020 from ITI Berthin

The data presented in Figure 9 presents the placement details of the students passed out in 2020 from ITI Berthin. It comprises and compares the student information with reference to their enrollment, passed, placed and self-employed status.

The welder trade has a pass rate of 87.5 percent, with 62.5 percent of students placed through campus placement and 25 percent working independently. The electrician trade has a passing rate of 94.73 percent, of which 52.63 percent of diploma holders are placed on campus and 42.10 percent are self-employed. In the mechanic electronics trade, 100 percent of students passed, 88.23 percent are placed through campus placement, and 11.77 percent are self-employed. The pass rate for the COPA trade is 90%, of which 72.5% are placed through campus resources and 17.5% are self-employed. The dressmaking course has a 100 percent pass rate, with only 9.09 percent of students being placed on campus and the remaining 90.91 percent being self-employed. The fitter course has a 100 % pass rate, of which 75% are placed through campus

placement and 25% are self-employed. The mechanical engineering occupation has a pass rate of 93.75 percent, of which 68.75 percent got campus placement and 25 percent are self-employed.

4.6 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 7 Key Observations, Impacts and Suggestion

S No.	Key Observations	Impacts of the Project	Suggestions for improvement
1	The building provides adequate space for both theoretical and practical classes. There are two classrooms for theory, two labs for practical, including an IT lab, one library, one lecture hall, and separate restrooms for boys and girls.	- Adequate space for accommodating more students and new courses. a. Increase in student strength at ITI, Berthin by 40 numbers. b. A new library ensured options for self-study and access to learning resources. c. Lecture hall ensures holding meetings, lectures, and other events. d. Additional IT lab was built in the new building which has led to enrolment of more students. e. New Courses were	The opportunity to make use of computer labs and library for extended hours and holidays will be a boon for students who do not have a means to practice it at home.

		introduced: • Fitting • IT training	
2	It was observed that the building has visible dentures in the walls and roofs at some locations suggesting clogged drainage pipes from the roof and resulting into seepage.	The improper maintenance of the building certainly gives a worn look despite being constructed recently mainly because of seepage due to water logging in the roof. a. It might reflect on the student intake and revenue. b. Resulting in the ambience and dampness within classroom. c. If not maintained timely, the water seepage would increase and cause obstructions in the learning environment for students and on the life of the building.	The new building certainly provides a space and contributes to revenue through new courses and increased intake of students, but also requires maintenance w.r.t to the unclogging the drainage system Maintenance of assets should be taken up for sustained benefit and larger good like water proofing and painting and routine unclogging of drainage system of the entire building especially during rainy and winter.
4	No main door at the entry of the washroom.	Whenever the classes run in full swing, due to absence of door the foul smell from the toilets despite regular cleaning in the learning environment of the students.	A door should be installed at the main entrance of the toilets to prevent the foul smell from spreading and safety. The toilets should be cleaned regularly.

5	There was no sign board (information) of SJVN on the building displaying the contribution made by the SJVN.		In order to increase the goodwill of company, the new building should have a board displaying the details of SJVN financial support to recognize the contribution of the company towards the expansion of ITI Berthin.
---	---	--	--

4.7 Overall Feedback from beneficiaries

Table 8 Overall Feedback from beneficiaries

Positive feedback	Suggestive feedback
The environment of the building is conducive for studies (according to the students). The building has adequate facilities including theory and practical classrooms, washrooms for boys and girls, drinking water facility, library, IT lab and lecture hall. Sufficient room space is available for practical and theory classes.	Maintenance of assets should be taken up for sustained benefit and larger good like water proofing and painting and routine unclogging of drainage system of the entire building especially during rainy and winter.

4.8 Assessment of the initiative (OECD)

Table 9 Assessment of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	The ITI, institute was in need of a new building on the institute premises since the old building had limitations to enrolling more students and launching new courses.
Effectiveness	High	The initiative is efficient in its approach as the new building is spacious and has all the required infrastructure for a vocational training institute. Two new courses were introduced and forty new students have joined to the existing strength.
Impact	Medium	The student's capacity increased by 50 after the construction of the building in the institute's premises. Two new courses were introduced which resulted in increase in the number of students in the institute. Apart from that, the capacity of computer operations courses increased by 30, doubling the capacity of the class. However, the structure of the building was not well built and the walls have water retention problems, that left untreated can cause accidents.
Efficiency	High	The classrooms and the practical rooms are utilized in full capacity in the building. Apart from that, the common spaces like halls, library, and computer lab are also frequently visited by the students. The utility part in the building is operating as required.

Parameter	Scale	Description
Coherence	High	This initiative is in line with Schedule VII of the Companies Act, 2013 and align with the SDG-4 i.e., quality education. Apart from that, this initiative also aligns with various national and state-level educational Policies of Govt.
Sustainability	Medium	The new building has the capacity to accommodate one new course in the long run. Maintenance funds should be created to manage routine repair and damages as may occur.

4.9 Conclusion

Financial support provided to ITI Berthin serves a social purpose, as the majority of students come from socioeconomically disadvantaged backgrounds. Vocational training institutes such as ITI Berthin play a crucial role in providing career opportunities to aspiring students who are more interested in skill-based education/vocation than in academics. The new building has made it possible for the ITI to offer vocational training to more disadvantaged youths. This extended infrastructure resulted in revenue generation through increased intake in all the courses. However, routine maintenance would ensure sustained benefit to the nearby communities and the students and contribute to the employment avenues. This financial assistance to ITI, Berthin by SJVN is a welcomed initiative in light of the rising demand for new course offerings across the nation.

CHAPTER V

CSR Project 2: Providing Financial support to ITI, Bangana, UNA (HP)

Project Proponent:	SJVN Ltd.
Assessment Year:	2020-21
Starting Year:	2012
Completion Year:	2019
State:	Himachal Pradesh
Activities:	Construction of building in the premises of ITI, Bangana, Una (HP)
Total Expenditure:	Rs. 100 Lakh

5.1 About ITI, Bangana, Una

Industrial Training Institute (ITI) Bangana Una was established in the year 2000. It is one of the 103 government ITIs set up by the Department of Technical Education, Vocational and Industrial Training, Government of Himachal Pradesh. The institute offers different courses including electrician, fitter, MMV, COPA, ICTSM, plumber, fashion design and technology in the long term and offers self-employed tailor, domestic data entry operator, multi skill technician and plumber in the short term course. The minimum qualification for getting admission in the ITI is 10th pass. The institute currently has a total of 29 staffs, out of which 20 are teaching staff and 9 are non-teaching staff.

5.2 About the Project

ITI Bangana was facing a lack of space for accommodating more courses and students. In light of the problem, SJVN decided to adopt the ITI to facilitate its expansion. The company provided financial support of Rs. 100 Lakh under its CSR initiatives for construction of an additional building in the premises. The building is a two-story building in which there are 9 classrooms 7 workshop, library, drawing hall, multipurpose hall and washrooms for boys and girls. The financial support was provided in 2012 by SJVN and the construction of the building started in 2012 and was completed in 2019.

Project Location	Financial Year 2012-2013	Total Expenditure INR (in lakh)
ITI Berthin, Bilaspur	Financial support of Rs. 100 Lakh was provided by SJVN as one time support	100

	Theory rooms	9
	Lecture hall	1
	Library	1
	Multipurpose Hall	1
	Washroom	2

5.4 Socio Economic profile of beneficiaries

Presently, ITI Bangana has 257 students enrolled in the long term trade, of which 40 are female and 217 are male. The percentage of female and male beneficiary students is depicted in the graph below.

Source: ITI, Bangana, Una through investigating team SR Asia

Figure 9 Gender Distribution of beneficiaries

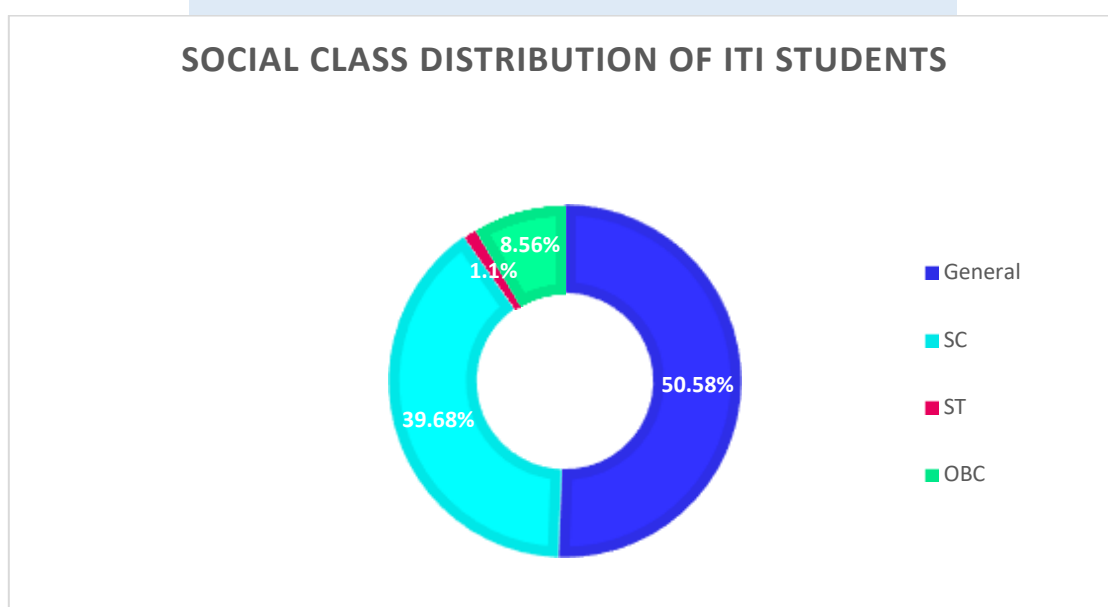

The distribution of students by social category is depicted in the table below.

The table indicates that more than half of the students enrolled in the ITI's long-term trade are from the general category. The remaining students are primarily from the SC and OBC categories, while only 1% are from the Scheduled Tribes.

Table 12 Distribution of students according to social category

Social Category	No. of Students
General	130
SC	102
ST	3
OBC	22

Figure 11 Details of placement of students

The data presented in Figure 12 presents the Details of placement of students through ITI, Bangana, Una in the year 2020. The chart provides information about students who enrolled, graduated, are employed and are self-employed.

The electrician trade has a pass rate of 93.75 %, with 87.5 percent of students placed through campus placement and 6.25 percent working independently. The fitter trade has a passing rate of 100 percent, of which 55% percent of graduates are placed on campus and 45 percent are self-employed. In the MMV (Mechanic Motor Vehicle) trade, 93.33 percent of students pass, 83.33 percent are placed through campus placement, and 10 percent are self-employed. The pass rate for the COPA trade is 92.5%, of which 82.5% are placed through campus resources and 10% are self-employed. The ICTSM (Information & Communication technology System Maintenance Theory) course has a 90 percent pass rate, with 83.33 percent of students being placed through the campus and the remaining 6.66 percent being self-employed. The Plumber course has a 96.66 percent pass rate, of which 70% are placed through campus placement and 30% are self-employed. The fashion designing occupation has a pass rate of 100 percent, of which 77.14 percent are placed through campus placement and 22.85 percent are self-employed. The technology trade has a passing rate of 100% and 100% students are placed through campus placement.

5.6 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 14 Key Observations, Impacts and Suggestions

S No.	Key Observations	Impacts of the Project	Suggestions for improvement
1	The building has enough space for theory and practical classes. There are 9 theory classrooms, 7 practical classrooms including IT lab, one	Initially the ITI, offered only two courses in their institute, after the addition of new building in the premises 5 new courses were started. A new library was built for the students where they can	A provision of keeping the institute open beyond institute's hours once or twice a week for students to practice their skills.

S No.	Key Observations	Impacts of the Project	Suggestions for improvement
	library, one lecture hall, one multipurpose hall and two washrooms in the building	sit and study. They have a lecture hall for holding meetings, lectures and other events. Additional IT lab was built in the new building which has led to enrolment of more students.	
2	The premises of the institute are well maintained and neat and clean. Students of the institute are disciplinarian in their approach	The environment of the building is conducive to learning and practicing.	Provision of online learning material can be made available for theory subjects to introduce the students to blended mode of education and enhance their technological skills. Those who cannot afford a mobile/laptop can be provided by the institute for a duration of their course.
3	The library is well stocked with variety of books offered related to each stream.	Students have a quiet place to study and expand their knowledge beyond the institute's learnings.	Organisation of inter ITI competitions to promote competitive spirit among the students.

S No.	Key Observations	Impacts of the Project	Suggestions for improvement
4	There is a Wi-Fi facility in the hostel, library and seminar halls.	Students have a quiet place to study and expand their knowledge beyond the institute's learnings.	
5	The institute provides transportation facilities within Una-Himachal Pradesh and its suburbs.	Students can commute easily to the institute and can attend the classes regularly due to the transportation service.	
6	Govt. ITI -Bangana offers a range of Seminars, Guest Lectures, Conferences, Corporate Meets, Personality Development & Communication Skill Programs and Counselling Sessions to make the candidates placement ready.	Majority of students passed out from the institute are either placed in government firms or are practicing for their own business. Some has undertaken their skills to practice it in their homes only.	Compulsory Internship opportunity for students can also be explored.

5.7 Overall Feedback from beneficiaries

Table 15 Overall Feedback from beneficiaries

Positive Feedback	Suggestive feedback
The environment of the building is conducive for studies (according to the students). The building has adequate facilities including theory and practical classrooms, washrooms for boys and girls, drinking water facility, library facility with adequate books, IT lab, lecture hall and multipurpose hall. Sufficient room space is available for practical and theory classes in the building.	Organization of various competitions among the students of the ITI, to promote healthy environment in the institute and provide motivation to the students to do better.

5.8 Assessment of the initiative (OECD)

Table 16 Assessment of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	ITI, Una was in dire need for a new building in the institute to expand the courses in the institute. The institute planned to add five more courses into curriculum of the institute which comes with an added need of a building to accommodate all the students and the space for the courses to be conducted.
Effectiveness	High	The building is spacious and is able to accommodate all the students admitted in the institute. There are designated spaces allocated for all the theory and practical classes along with essential spaces such as washrooms and common spaces such as hall and lecture room.

Parameter	Scale	Description
Impact	High	With the provision of the new building in the premises of the institute, five regular courses and three short term courses has been started in the institute. This building provided a provision of admission of hundreds of students in the institute. This initiative also provided support to students belonging to economically weaker sections of the society.
Coherence	High	The initiative is in line with the Schedule VII of the Companies Act 2013 and also align with the Sustainable development goal- 4 i.e., Quality education.
Efficiency	High	The initiative had been efficient in its approach. More than 300 students have been admitted in the institute after its inception. There are designated spaces for each activity such as theory and practical classrooms for each course, halls, library washrooms etc.
Sustainability	High	The construction of the structure of the building is of good quality. There are no visible faults in the structure of the building such as any kind of water retention in the ceiling etc. The initiative is long running in its approach with the addition of all the courses, admission of students and recruitment of qualified teachers in the institute. With proper maintenance and care, the building can be sustainable in its approach in the long run.

5.9 Conclusion

Financial support to ITI Bangana serves a social purpose, as majority of its students come from socioeconomically disadvantaged backgrounds. Vocational training institutes such as ITI, Bangana play a crucial role in creating career opportunities for young people who are more interested in skill-based education/vocation than in academics. The SJVN-funded new building has enabled the institute to introduce five new courses. SJVN's financial assistance to ITI Bangana is a welcome initiative in light of the country's rising unemployment rate. The building's structure is well-constructed and well-maintained, from a building's perspective. The building is sufficiently spacious and well-maintained to accommodate students with ease.

CHAPTER VI

CSR Project 3: Construction of Hostel Building (HP)

Project Proponent:	SJVN Ltd
Assessment Year:	2020-21
Starting Year:	2017
Completion Year:	2019
State:	Himachal Pradesh
Activities:	Providing funding for construction of hostel building in Saraswati Vidya Mandir, Vikasnagar, Shimla (HP)
Total Expenditure:	Rs. 233.90 Lakh

6.1 About Saraswati Vidya Mandir School

Saraswati Vidya Mandir School in Vikas Nagar, Shimla is one of the well-known educational institutions in Himachal Pradesh. It is a co-educational school with 1150 students, some of whom are hostellers. The school was opened in 1988-89 in a rented building in Village Anji (Vikasnagar) by Himachal Shiksha Samiti. In 1992, the land for the construction of school was bought and in 1993, the construction was started. The school has 66 spacious rooms which accommodates all classes from Nursery to 10+2. So, there are fully developed laboratories, smart class, library and a reading room.

6.2 Infrastructure detail of School

Table 17 Infrastructure Detail of School

i) In Acres:	3.602 Acres
ii) In sq. mtrs.	14448.66 sq. mtrs
iii) Built up area (sq. mtrs):	4610.33 sq. mtrs.
iv) Area of playground in sq. mtrs:	4200 sq. mtrs.
v) Other facilities	
a) Swimming Pool:	No
b) Indoor Games:	Chess, Table Tennis
c) Dance Rooms:	Yes
d) Gymnasium:	No
e) Music Rooms:	Yes
f) Hostels:	Yes, For 150 boys only

Source: <https://www.svmhimrashmi.org/infrastructure/>

6.3 About the Project

SJVN under its CSR initiatives has provided partially financial assistance of Rs. 2,33,90,071/- for the construction of Boys hostel in Saraswati Vidya Mandir school in 2017-18 and 2019-2020.

The construction of the hostel was completed in the year 2019. The total cost of construction was Rs. 5,20,00,000/-.

6.4 Observations and Impact

Table 18 Observations and Impact

Key Observation	Impacts of the Project	Suggestions for Improvement
- Saraswati Vidya Mandir received a substantial amount of financial support from SJVN for the construction of the hostel. - The hostel has a capacity of 150 students. However, there are only 38 hostellers living their post COVID-19 pandemic. - The hostel is well-built with spacious rooms, dining areas, kitchen and washrooms. The hostel premises are clean and well maintained. - The earlier hostel was congested where 12-15 students were living in one room, whereas in the new hostel two students are sharing a room. - The hostel rooms inside are neat and clean. Students coming from poorer backgrounds coming from other states such Leh Ladakh	- The new hostel structure has resulted in significant changes for the hostel residents. They have a more conducive environment for studying now that there is sufficient room for everyone. - The financial assistance received from SJVN was also used to construct perimeter walls that protect the hostel and its occupants. During the pandemic, in addition to serving food to students, the hostel also served food to frontline workers such as ambulance drivers, etc.	- Although the hostel has provided the students with a high-quality infrastructure, there is still a lack of study chairs and lights in the rooms. - These facilities should be provided so that studies of the hostellers are not hampered. The hostel is currently utilizing only 25% of its actual capacity. - The empty rooms in the hostel can be used to provide tutoring to disadvantaged school children in Shimla or to instruct children to take

Key Observation	Impacts of the Project	Suggestions for Improvement
or Assam are given accommodation free of cost. The hostel has all basic amenities in place like power supply, canteen, toilets, bathrooms, Drinking water facilities.	- Students in hostel facilities feel safer and thus mostly spend quality time in studying and score better marks in exams. - Financial burden is less on the families whose children find free hostel facilities.	part in extracurricular activities. Solar panels can be installed in the hostel building to solve the issue of limited power supply and power-cuts.

6.5 Overall Feedback from Beneficiaries

Table 19 Overall Feedback from Beneficiaries

Positive Feedback	Suggestive Feedback
The atmosphere in the dormitory is conducive to study. There is order and discipline on the premises of the hostel. The hostel's facilities are regularly cleaned.	There should be a provision of tables and chairs in the hostel. There is an issue of power-cuts in the hostel which hampers the studies of the hostellers require corrective measures.

6.6 Assessment of the initiative (OECD)

Table 20 Assessment of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	The SVM school was in desperate need of a new hostel because the old one was overcrowded and dilapidated. Considering that students from other parts of the country,

Parameter	Scale	Description
		such as Leh Ladakh and Assam, also come to SVM to study, a larger, more accommodating hostel infrastructure was necessary. Therefore, the construction of a larger hostel was a pertinent endeavor.
Effectiveness	High	The hostel has provided the hostellers with spacious rooms and a conducive study environment. Almost all of the necessary amenities are available in the hostel, with the exception of study lights and chairs in the rooms.
Impact	High	Now that the new hostel has created a peaceful environment for studying, the hostellers can focus entirely on their studies. Students from all over Himachal Pradesh and beyond have a safe environment to study in the hostel. Free dormitory housing is provided to low-income students from other states, reducing the financial burden on their families.
Coherence	High	This SJVN-funded project aligns well with the 2019-2020 CSR theme of "school education, healthcare, and nutrition." The hostel at Saraswati Vidya Mandir has not only provided the students with a safe place to study, but also nutritious meals four times a day, a daily prayer schedule, and opportunities for daily exercise, etc., in order to maintain their health and nutrition.
Efficiency	Medium	As a result of the COVID-19 pandemic, the number of hostel guests has decreased significantly, leaving the majority of the new hostel's rooms vacant. The hostel infrastructure has not yet been utilised to its maximum capacity. In the post-COVID era, when more students choose to live in the hostel, the facility will be utilized effectively.
		The new dormitory accommodates 150 students and is

Parameter	Scale	Description
Sustainability	High	spacious. As the COVID-19 situation stabilises over the next few years, the university should be able to accommodate more students. To ensure the sustainability of this infrastructure, the hostel should undergo routine maintenance.

6.7 Conclusion

The financial support provided to Saraswati Vidya Mandir by SJVN has been utilized well to build a much-needed hostel facility. The hostel is well-maintained and clean and caters to all the needs of the hostellers. Another point to be noted is that although the school is co-education, hostel facility is only available for boys.

CHAPTER VII

CSR Project 4: Installation of 23,000 Dustbin sets in Shimla and Mandi parliamentary constituencies of HP under Swachh Bharat Abhiyan

Project Proponent:	M/s Energy Efficiency Services Limited.
Assessment Year:	2020-21
Starting Year:	2017
Completion Year:	2019
Activities:	Installation of 23,000 sets of twin bin dustbins in Parliamentary Constituencies of Shimla and Mandi (HP)
Total Expenditure:	Rs. 1018.00 Lakh

7.1 About the Project

Solid waste management has become a practical necessity in every locality. Domestic refuse from individual households and in public spaces should not become a cause for unsightly streets and unhealthy rural environment. An essential requisite for a healthy rural environment and quality living is proper waste handling and management. SJVN Ltd. supported the cause by signing a Memorandum of Association (MOA) with Energy Efficiency Services Ltd. (EESL) in 2017-18 to install 23,000 twin bin dustbin sets in the Parliamentary Constituencies of Shimla and Mandi. This initiative was undertaken in line with Swachh Bharat Abhiyan launched by GoI. The MoA was signed for 23,03,97,831 out of which Rs. 10.18 crore was meant for the installation of dustbins (while the rest was for installation of solar lights). Under this MoA EESL was also required to provide one-year warranty of the dustbin sets installed.

Each and every small village, Schools, Hospitals, bus stops, vegetable markets, temples and other religious places, public parks, gardens etc. under panchayat as well as municipal area were covered in the 23 constituencies specified by SJVN. As per the terms, EESL was supposed to install 1,000 dustbins in each assembly constituency for segregation of dry and wet waste in blue and green color dustbins. The project was completed by EESL in the year 2019.

7.2 Objectives of the Project

- The objective of the project was to supply and install 23000 twin set dustbin in 23 assembly constituencies of Himachal Pradesh under CSR initiatives of SJVN Limited.
- To promote Swachh Bharat Abhiyan launched by Government of India.
- To make people aware about the proper disposal of waste and provide them infrastructure for their use to dispose of the garbage and waste as a support towards national mission on cleanliness.
- Installation of dustbins shall improve the lifestyle and limit the spread contagious and other diseases. It shall also help to maintain the premises clean. The twin set of dustbin contains 01 blue and 01 green dustbin for dry and wet waste respectively.
- This project will contribute to SJVN's Corporate Social Responsibility vision and will promote a clean, healthy and positive environment thus modernizing societies in accordance with the DPE Guidelines on CSR and Sustainable Development.

7.3 Project sites

The distribution of the 23,000 waste bins installed by EESL for the SJVN CSR initiative is shown in the table below. The table provides information regarding the assigned and installed quantities of twin-set dustbins for each assembly in the Shimla and Mandi parliamentary constituencies.

Table 21 Detail of Constituency wise installation of twin dustbins

S No.	Name of parliamentary constituency	Name of Assembly	Assigned quantity	Installed quantity	Remarks
1	Parliamentary constituency- Mandi	Manali	1000	1000	A total of 23 parliamentary constituencies in Shimla and mandi have been assigned the distribution of twin-set garbage cans. EESL is responsible for installing 1,000 sets of twin-set dustbins in each constituency. By 2019, all 23,000 waste bins had been installed in both parliamentary constituencies.
2		Joginder Nagar	1000	1000	
3		Sarkaghat	1000	1000	
4		Seraj	1000	1000

Total Twin-set Dustbins Installed			23000	23000	

7.4 Key Findings and Analysis

The impact assessment team of SR Asia carried out survey in 30% of the constituencies where twin dustbins sets were installed by EESL which include Shimla Rural, Mandi, Kullu, Rampur, Joginder Nagar, and Kinnaur. Various schools, colleges, temples, and public places were visited to assess the status of twin-set dustbins installed. However, not all dustbin sets were found in place since the durability of such twin-set dustbins is limited and the warranty period of these twin-set dustbins is also over since it has been three years since the completion of the project. Based on the constituencies visited by the team, the verification of the twin-set dustbin located in various areas, and interaction with beneficiary population in the surroundings, the findings are discussed here.

7.5 Key Observations, Impacts and Suggestive Measures

Table 22 Key Observations, Impacts and Suggestive Measures

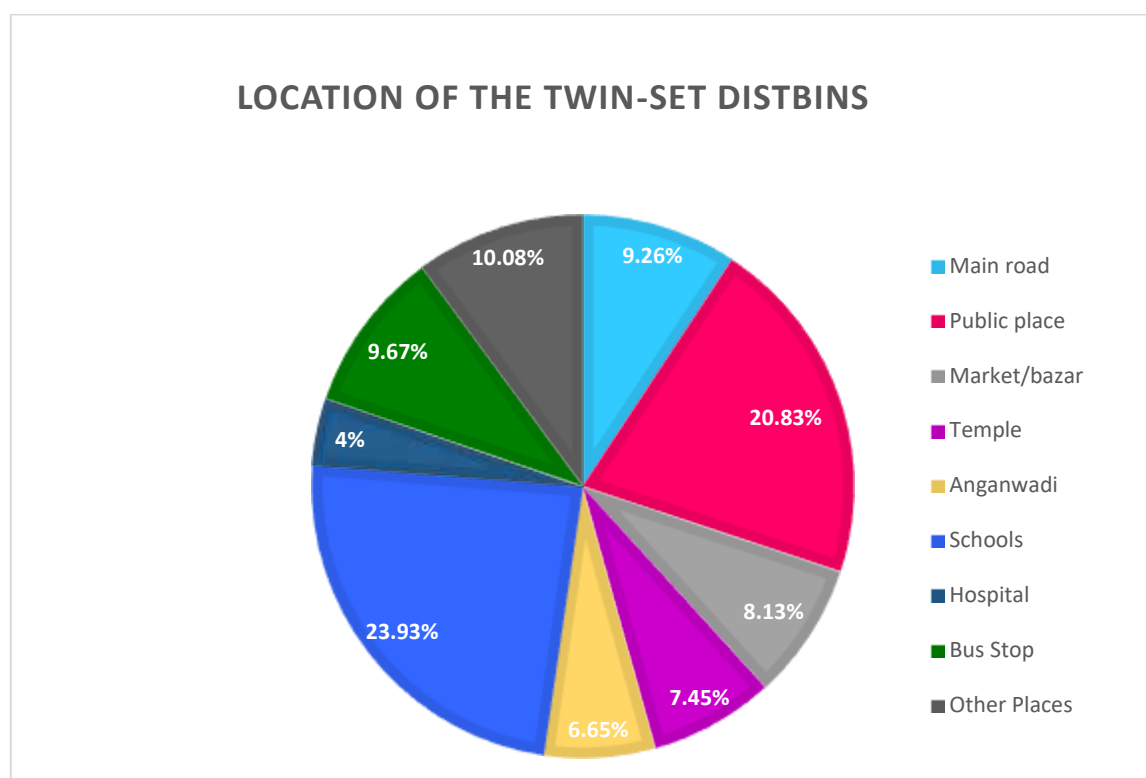

Key Observations	Impacts of the Project	Suggestions for Improvement
- Beneficiaries are using the dustbins that are still installed and in good condition. A large number of the twin-set dustbins are installed in the schools. - Constituencies could not be located as the durability of the twin-set dustbins is low. - In some areas people were using twin-set dustbins as	- The people learned about waste segregation practices, especially in the schools where the twin-set dustbins were installed the students have learned about proper waste management. - The twin-set dustbins have contributed to making the areas cleaner and more sanitary where there was	- The material used for the making of twin-set dustbins should be made more durable so that they last longer. - There should be proper guidance for disposal of wet garbage as at many times they lead to damaging of the twin-set dustbins and foul smell if not cleared regular.

Key Observations	Impacts of the Project	Suggestions for Improvement
storage units in their own home. The maintenance of the twin-set dustbins in schools and temples was better than that in other public places. Some of the twin-set dustbins located in hilly areas were found in broken condition due to various natural factors such as snowfall, heavy rain etc.	no garbage disposal mechanism earlier.	There should be some follow up on the part of EESL to make sure that the twin-set dustbins are in proper condition

7.51 Impact assessment through primary survey

i) Location of the twin-set Dustbins

As mentioned above the dustbins were installed in various places such as schools, colleges, temples, and other public places. The percentage-wise distribution of the twin-set dustbin sets is shown in the following diagram.

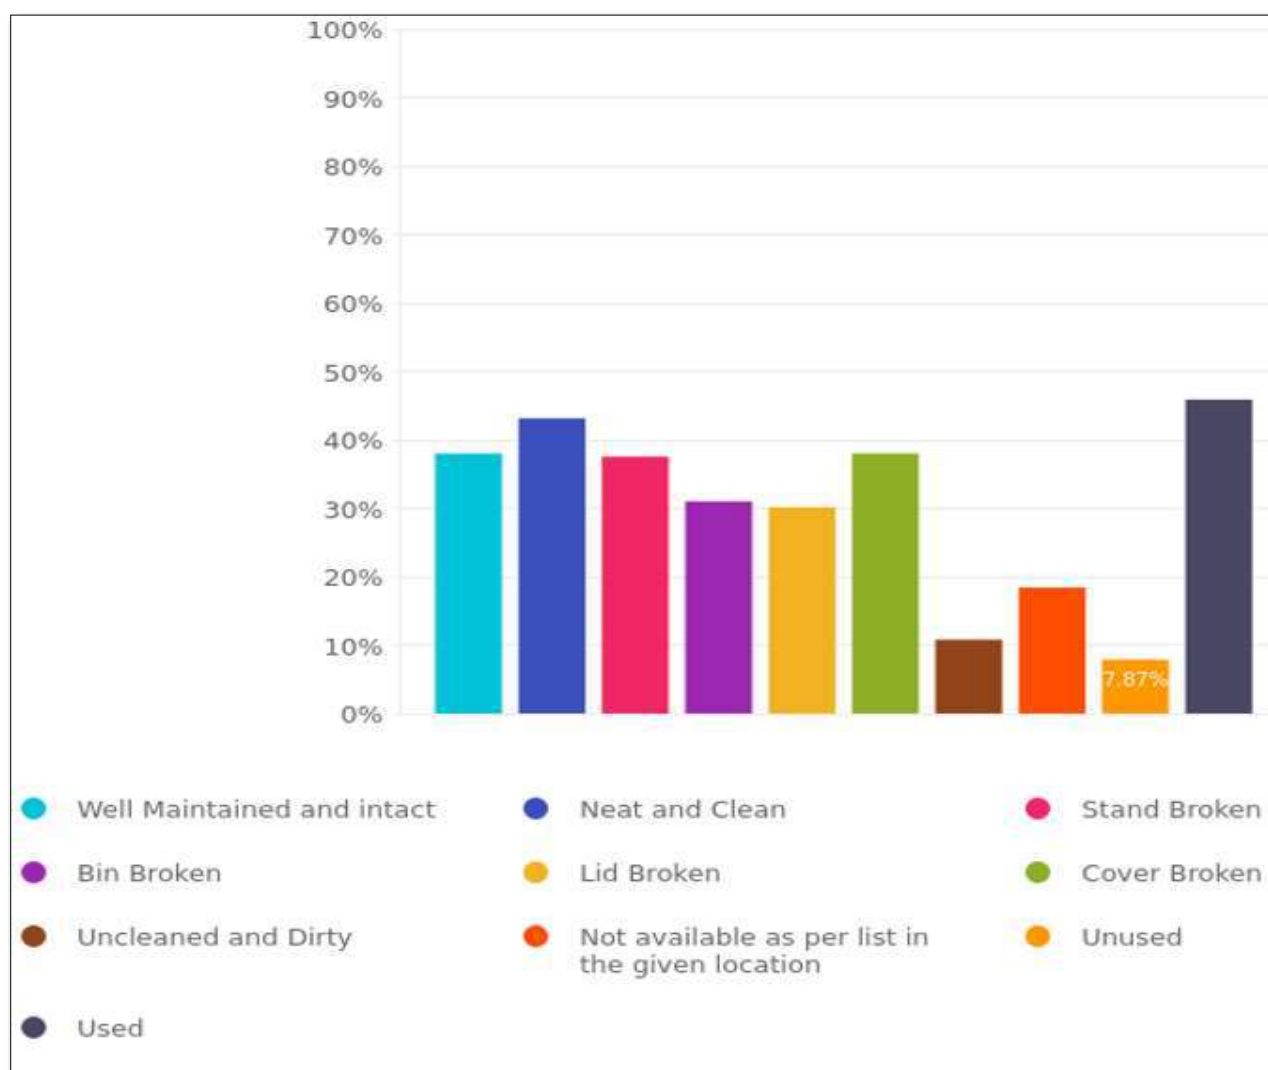

Source: Primary Survey

Figure 12 Location of the twin-set Dustbins

The location of EESL's twin-set waste dustbins are depicted in the graph above. It can be seen that the locations of the waste receptacles are chosen with high-traffic areas and maximum efficiency in mind. The majority of twin-set dustbins are located in schools (23.93 percent), followed by public locations (20.83 percent). Other locations (10.08 percent), including villages, police stations, fire stations, etc., have dustbins installed, followed by bus stops (9.67 percent). Dustbins were installed in 8 percent of markets, 7 percent of temples, and 4 percent of hospitals.

ii) Current Status of the twin-set Dustbins

The impact assessment team of SR Asia verified the physical status of the twin-set dustbins at different sites based on different parameters such as well-maintained and intact, neat and clean, stand broken, bin broken, lid broken, cover broken, unclean and dirty, used and unused. The following diagram shows the status-wise percentage of dustbin sets.

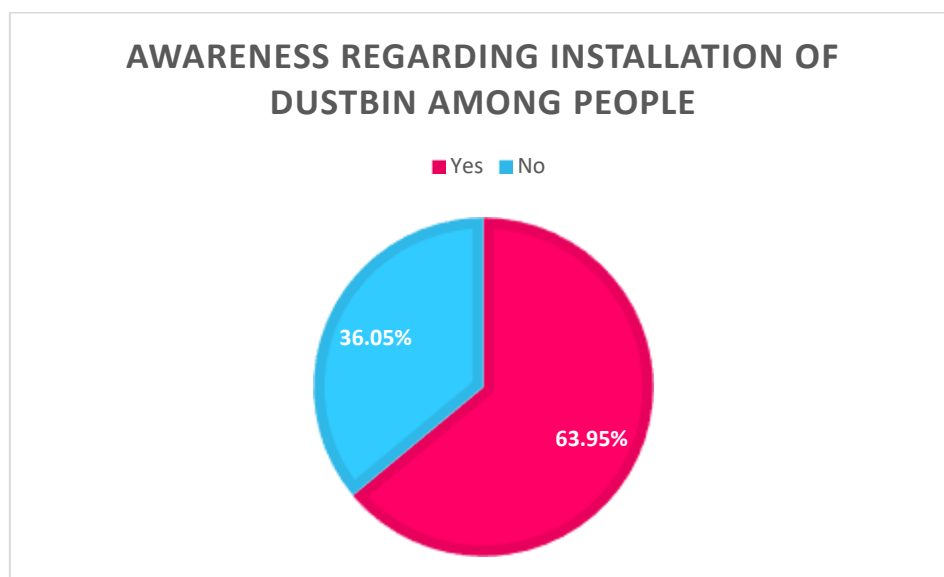

Source: Primary Survey

Figure 13 Current Status of the twin-set Dustbins

iii) Awareness about Installation of twin-set Dustbins

The beneficiary population was asked about their awareness of the twin-set dustbin sets being installed in their school/college/locality. 63.95% of the beneficiaries said that they are aware of the installation of dustbins. A graphical representation is given below.

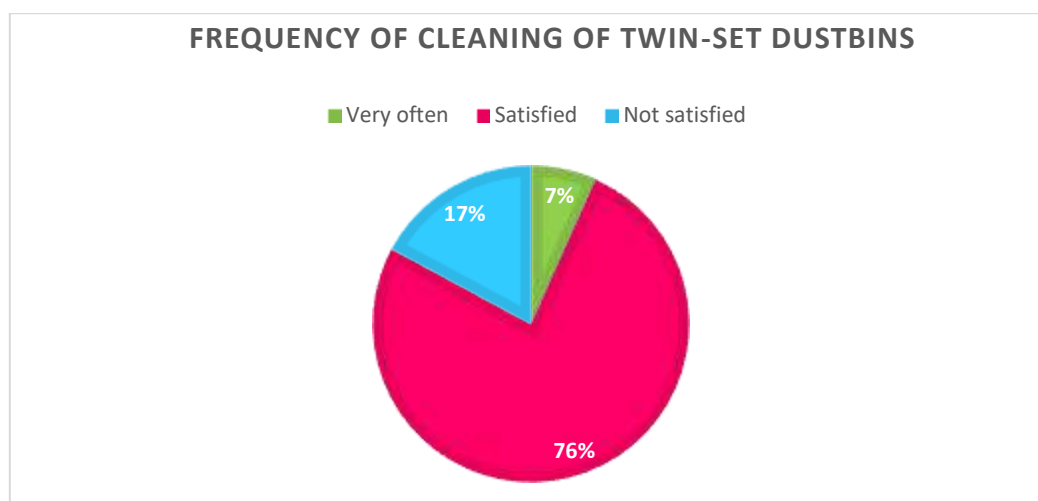

Source: Primary Survey

Figure 14 Awareness about Installation of twin-set Dustbins

iv) Cleaning and Maintenance of Dustbins

When asked about the cleaning and maintenance of the twin-set dustbins, only 7% said that they are cleaned very often, while 76% said that the frequency of cleaning is satisfactory. The following diagram shows the percentage of responses.

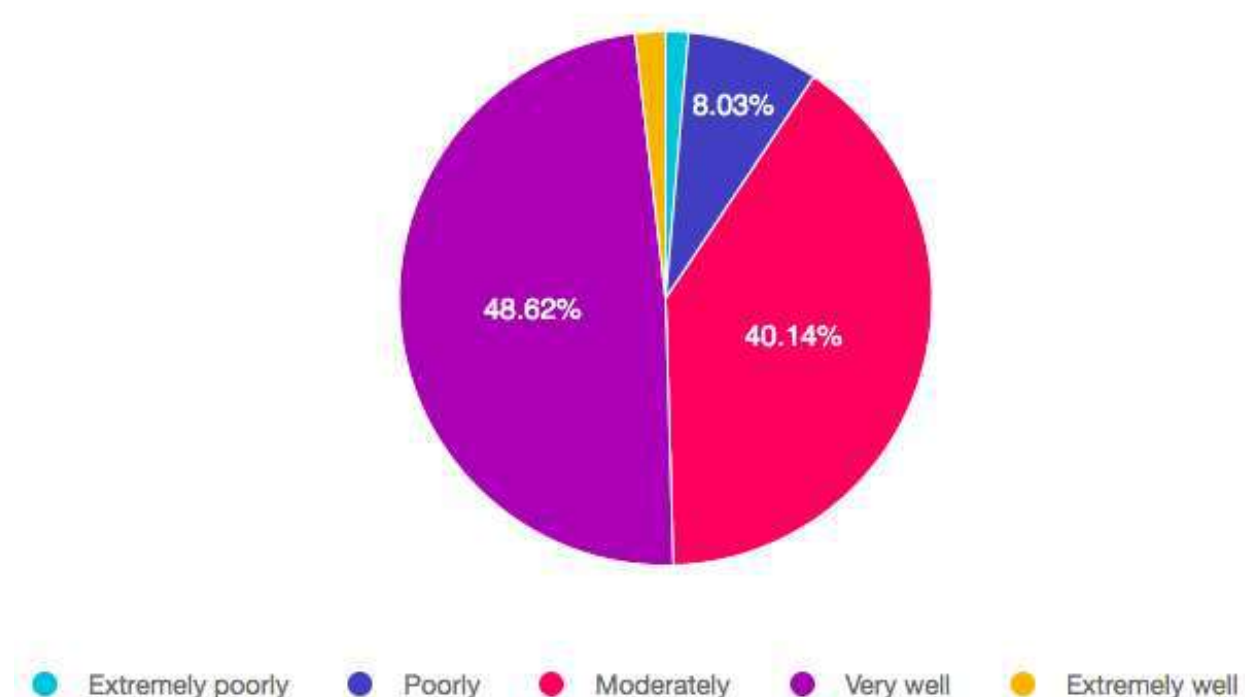

Source: Primary Survey

Figure 15 Cleaning and Maintenance of twin-set Dustbin

v) Service Performance of the twin-set Dustbins

The beneficiaries were asked about their opinion regarding the service performance of the twin-set dustbins installed by EESL in their area. The responses are based on the parameters of extremely poor, poor, moderate, very well, and extremely well. The following diagram provides a graphic illustration of the responses that were received from the beneficiaries.

SERVICE PERFORMANCE OF THE TWIN-SET DUSTBINS

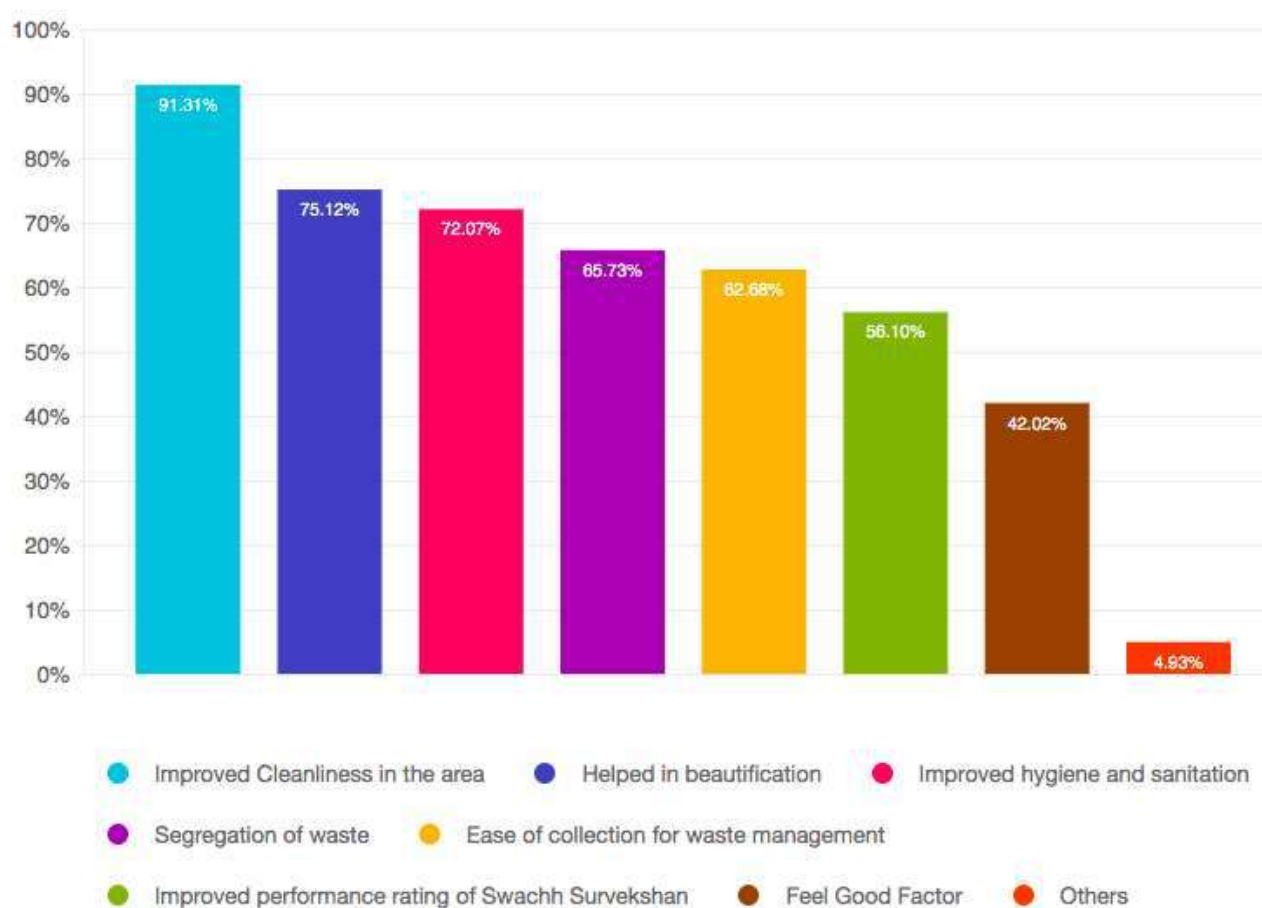

Source: Primary Survey

Figure 16 Service Performance of the twin-set Dustbins

From the graphical illustration, it can be observed that 40.14% of respondents said that the twin-set dustbins have served the purpose moderately well, while 48.62% said that they have served the purpose very well. 8.03 percent of respondents have reported that the performance of the twin-set dustbins has been extremely poorly, while 1.08% expressed that it was extremely well.

vi) Impact of the twin-set Dustbins Installed

The project's beneficiaries were asked about the various perceived effects of the twin-set dustbins installed in their vicinity. The responses were recorded based on the parameters of improved cleanliness in the area, assistance with beautification, improved hygiene and sanitation, waste segregation, ease of waste collection and management, improved Swachh sarvekshan performance rating, feel-good factor, and other factors. The following diagram depicts the particulars of their responses.

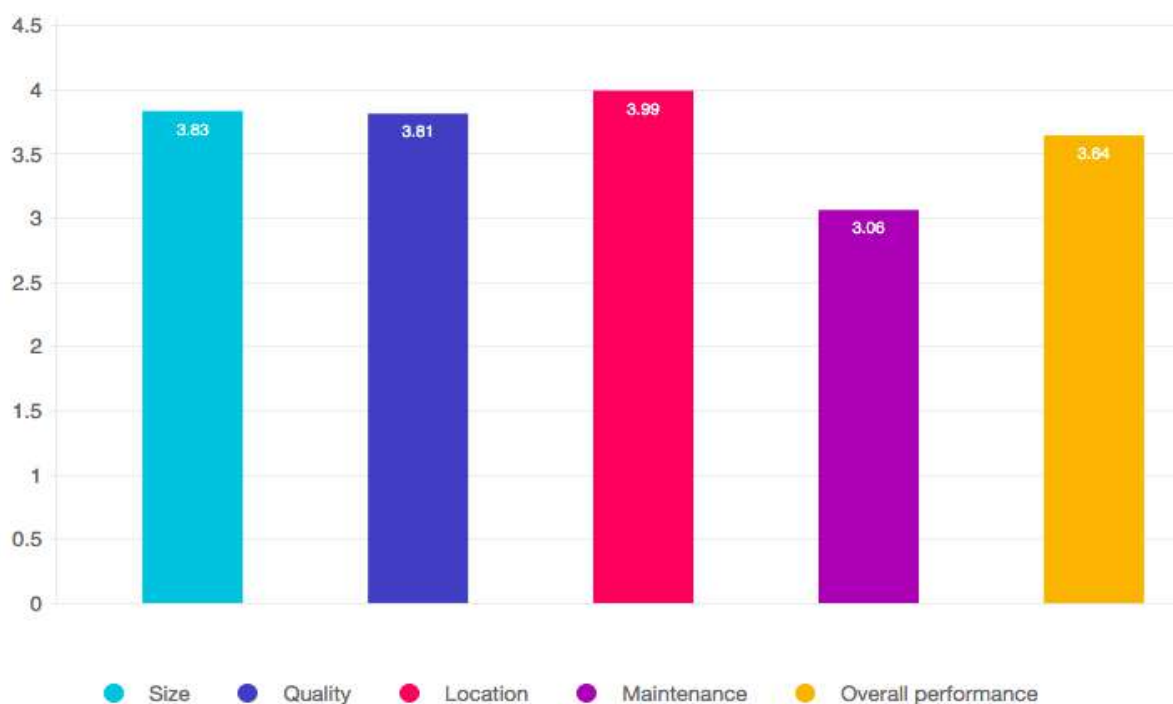

Source: Primary Survey

Figure 17 Impact of the twin-set Dustbins Installed

vii) Rating of the Dustbins

The impact assessment team asked the respondents to rate the dustbins installed by EESL on various aspect on a scale of 1 to 5, 1 being poor and 5 being excellent. A graphical representation of the average ratings given by the beneficiaries is provided below.

Source: Primary Survey

Figure 18 Rating of the twin-set Dustbins

7.6 Assessment of the initiative (OECD)

Table 23 Assessment of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	The installation of waste receptacles in public places and institutions is essential for the proper disposal of waste and the preservation of a clean, green planet. Given the country's limited waste disposal infrastructure, SJVN's financial support for this project is an important initiative. Particularly the separation of biodegradable and non-biodegradable

Parameter	Scale	Description
		waste is a welcome initiative so that waste can be properly recycled.
Effectiveness	Medium	Providing a suitable waste disposal system, EESL's project has been effective. In most cases, people continue to use dustbins for waste disposal. However, in some instances, the dustbins were broken due to weather-related damage.
Impact	Medium	The project has had some effect on waste management in the parliamentary districts where they were installed. People made it a habit to practice waste secretion. However, more people should be educated about the significance of waste segregation and proper disposal through awareness campaigns. Thus, the project will be more effective in bringing about social change.
Coherence	High	This project is compatible with the Indian government's Swachh Bharat Abhiyan, which aims to create a clean India. The dustbins contribute to the country's solid waste management system, which is one of the two central aspects of the mission/Abhiyan.
Efficiency	Low	Many of the installed dustbins were either stand broken or were not found in their place due to harsh climatic conditions of hailstorm and snowstorm along with factors such as road widening.
Sustainability	Low	Although waste segregation and recycling of non-biodegradable waste led to sustainability, the EESL-installed dustbins are not a sustainable means of achieving this objective due to harsh weather conditions and limited durability of the dustbins. On paper, the initiative is sustainable, but given the large amount of

Parameter	Scale	Description
		money spent on the dustbins, the longevity of the product is unsatisfactory, rendering the project unsustainable.

7.7 Conclusion

The installation of dustbins by EESL is one of the SJVN's large-scale CSR initiatives, with 23,000 dustbins successfully installed in 23 assembly constituencies of HP between 2017 and 2019. In many locations, a large number of dustbins were missing because they had been damaged by harsh weather conditions, diminishing their long-term impact. However, this SJVN initiative is beneficial in the sense that the Swacch Bharat Abhiyan has greatly increased public awareness of cleanliness and waste management discipline.

CHAPTER VIII

CSR Project 5: SJVN Silver Jubilee Merit Scholarship Scheme

Project Proponent:	SJVN Ltd
Assessment Year:	2020-21
Starting Year:	2015
Completion Year:	2020
State:	Himachal Pradesh, Maharashtra, Bihar, Arunachal Pradesh & Uttarakhand
Activities:	Providing scholarship of Rs. 2000/- per month to each topper student selected for the scholarship undergoing higher studies
Total Expenditure:	Rs. 141.22 Lakh

8.1 About the Project

Through numerous programmes, the company has adopted its Corporate Social Responsibility policy in order to make meaningful contributions to the long-term socioeconomic development of communities. In order to achieve this goal, SJVN has introduced the "SJVN Silver Jubilee Merit Scholarship Scheme," which aims to instill a competitive spirit in students and foster their academic potential.

8.1.1 Eligibility for the Scheme

1. The students who have secured minimum 60% or its equivalent grade in 12th class examination in any discipline from a school under State Education Board, CBSE or ICSE in the immediately preceding academic session in the State of Himachal Pradesh, Uttarakhand, Bihar, Arunachal Pradesh and Maharashtra. Eligibility for percentage of marks for BPL will be 50% and for PWD passing marks.
2. There will be no domicile restriction for students for eligibility of the scheme.
3. Recipients of any other scholarships will not be eligible for getting this SJVN scholarship.
4. Students will be awarded scholarships of Rs. 2000/- per month for pursuing regular courses for the whole duration of the next higher course after class 12th like B.Tech., B.Com., B.A., LLB/CA/CS etc.

8.1.2 Selection Procedure

1. Duly filled application form will be screened by an agency engaged by SJVN. The committee/agency will shortlist the candidates on following criteria:
2. Rank obtained by the student in terms of marks/equivalent grade obtained in 10+2 Board Examination.
3. In case of a tie of the ranking, the candidate of higher age will be preferred.
4. The shortlisted candidates will be called for screening with all original academic certificates and testimonials. Mere submission of the application will not guarantee the eligibility for the scholarship.
5. SJVN will have the right to accept or reject the candidature of any candidate at any stage without assigning reasons.

6. If sufficient applications are not received in a particular board/category then the vacant seats can be filled by other boards with the approval of Chairman, SJVN Foundation.

8.1.3 Release of Scholarship

The scholarship will be provided annually subject to passing of previous year/session examination successfully. The scholarship will be discontinued for the succeeding year/session if a student fails to pass the examination or passes the examination through supplementary examination, the student will be required to submit prescribed requisition form for release of the scholarship. The first installment of scholarship to the students will be provided on some special occasions like SJVN raising day, Republic Day, Teachers Day etc.

8.1.4 Definition of Project Affected Area

Project Affected Area means declaration by the appropriate Government an area of villages or locality under a project for which the land is being acquired under Land Acquisition Act, 1894 or any other Act in force or an area that comes under submergence due to impounding of water in the reservoir of the project or area situated over the underground component of the project. It also includes areas as notified by project authority. The unit for measuring project area shall be panchayat.

8.1.5 Removal of doubts

When a doubt arises as to interpretation of any of the provisions of this scheme, the matter shall be referred to Chairman, SJVN Foundation whose decision shall be final.

8.1.6 Amendments

The COD on CSR may amend, modify or add to these provisions, from time to time, and all such amendments, modifications or additions shall take effect from the start therein.

Table 24 Detail of financial support at a glance

Project Location	Financial Year 2015-2019	INR (in Lakh)
Himachal Pradesh, Bihar, Maharashtra, Uttarakhand, Arunachal Pradesh	Financial support of Rs. 141 Lakh was provided by SJVN	141.22

8.2 Socio economic profile of beneficiaries

The beneficiaries of the schemes are students who have completed their 12th standard and are going to pursue higher studies. Students having more than 60% and for BPL 50% and passing marks for PWD students are eligible for scholarship. The beneficiaries belong to project affected areas and are chosen by SJVN themselves.

8.3 Observations and Impacts

Table 25 Observations and Impacts

Key observations	Impacts of the project	Suggestions for improvement
Students who have excelled in their classes or schools were selected for the scholarship.	Students are able to avail monetary help to pursue higher education.	
There is no social class distribution among the beneficiaries of the scholarship. However, there are concessions for students belonging to BPL families and PWD category.	The organization awards the scholarship without regard to caste to those students who have worked diligently to improve their grades. Additionally, students from economically disadvantaged segments of society can benefit from the scholarship programme.	
Every student availing the scholarship of Rs. 24000/- per annum during the course of their higher studies.	Students received financial assistance in the form of scholarships and are able to contribute to their own education.	The students who fail to achieve the minimum passing requirement can be presented with a second chance, given that the

Key observations	Impacts of the project	Suggestions for improvement
However, the scholarship can be revoked if the students fail to maintain minimum passing marks during the course of their study.	They motivate other students to work diligently and achieve success.	circumstances of a student can be difficult at the time of giving exams and revoking of the scholarship can lead to the student dropping out of his course.
Students receive their scholarships on time, there is no delay.	Students who are dependent of the scholarship to pay for their studies can do so without any delay.	

8.4 Overall Feedback of Beneficiary

Table 26 Overall Feedback of Beneficiary

Positive feedback	Suggestive feedback
We received the scholarship money on time to pay for our studies. The scholarship had been a great help to us.	A second chance opportunity can be presented to students who had a genuine reason to be not able to maintain the given passing marks criteria for the continuation of the scholarship.

8.6 Social and economic impact of the programme

The COD on CSR may amend, modify or add to these provisions, from time to time, and all such amendments, modifications or additions shall take effect from the start therein.

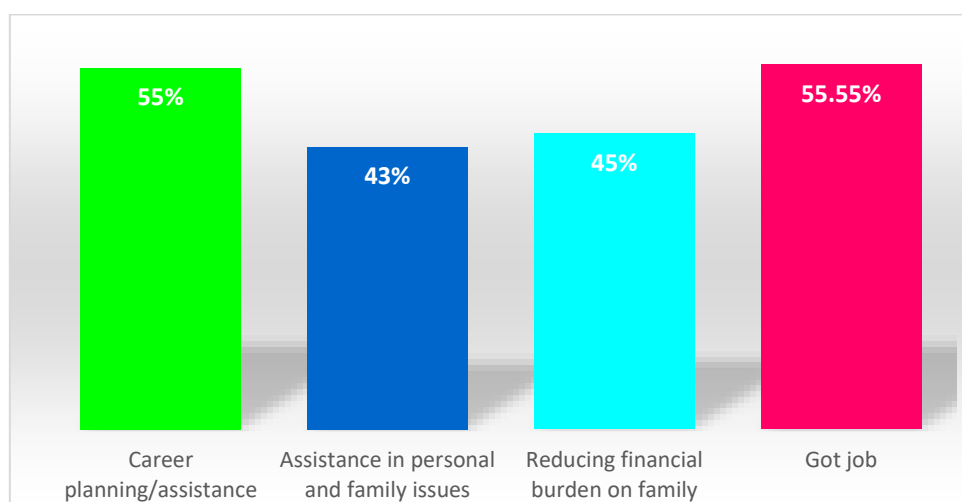

Figure 19 Social and economic impact of the program

The preceding graph demonstrates that scholarship recipients have only provided two responses regarding the scholarship's social impact. In addition to assistance with personal and family matters, the majority of respondents (55%) have cited assistance with career planning as a social impact. It can also be seen from the data that obtaining a job or a career (45%) and reducing the financial burden on the family are the two most important economic impacts for the recipients (55.55 %).

8.7 Assessment of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	The scholarship had been a need for the meritorious students who wished to pursue higher education without increasing any financial burden for their parents. An initiative was also needed to promote education in the area and for students to take education seriously.
Effectiveness	High	This initiative is effective in its approach as it provides scholarship to more than 100 students in a year. The students belonging from economically weaker sections of the society, project affected areas are able to support their studies themselves.

Parameter	Scale	Description
Impact	High	The students are pursuing their higher education without any difficulty and burden of financial expenses due to the scholarship. Those students whose parents are unable to support the child's higher education are also able to study and eventually venture into mainstream.
Coherence	High	This initiative is in line with the Schedule- VII of Companies Act, 2013, along with the SDG- 4 i.e., Quality Education. The initiative is also complementary to various government schemes in the field of education.
Efficiency	High	The scholarship scheme is used efficiently in its objective to promote education and help students in availing higher education, as once the student avail scholarship they have to obtain a minimum limit of marks to continue getting the benefits throughout the course of their education. The scheme not only persuade but also motivate students to continuously getting better.
Sustainability	High	The initiative is sustainable in its approach as once a student gets awarded the scholarship, they are eligible for it throughout the course of their higher education. The initiative is introduced in a long run to provide the best results.

Table 28 Assessment of the initiative (OECD)

8.8 Conclusion

The scholarship program's strategy for promoting higher education among students is effective. The initiative is a long-term effort to reduce the financial burden of higher education for students from low-income families, project-affected regions, and meritorious students from the general population. The scholarship has given students who wish to pursue higher education and those who wish to enter the mainstream access to a variety of opportunities.

CHAPTER IX

CSR Project 6: Organizing Ayurvedic Awareness Camp through Bhartiya Dharohar

Project Proponent:	Bhartiya Dharohar
Assessment Year:	2020-21
Starting Year:	2019
Completion Year:	2020
State:	Himachal Pradesh
Activities:	Organizing camps for spreading awareness regarding Ayurveda
Total Expenditure:	Rs. 172.00 Lakh

9.1 About the Project

In the year 2019-20, SJVN and Bhartiya Dharohar signed a MoU and entered an agreement to organize 500 health awareness cum lifestyle programme based on the Ayurvedic system of Medicine in Himachal Pradesh. Each ayurvedic camp has a financial implication of Rs. 34,400 per camp, which makes this programme a massive amount of Rs. 172.00 Lakhs. 500 camps were organized at project and non-project sites to encourage the ayurvedic lifestyle among the people and the masses. Each session of the ayurvedic camp has the following components: Lecture on healthy eating ways, home remedies for curing disease, information about the ayurvedic lifestyle, booklet distribution among beneficiaries and distribution of seasonal fruit and natural juices among the beneficiaries. Each awareness camp is facilitated by a Vaid and an organizer. The ayurvedic camps were organized at project and non-project areas, to spread awareness regarding ayurveda and the healthy lifestyle among the people. In the year 2019-20, the programmes have been conducted in about 500 schools and villages in each of the project site targeting thousands of people in the process and making it one of the biggest initiatives by SJVN.

Funding details at a Glance

Table 29 Detail of financial support at a glance

Project Location	Financial Year 2017-18	Financial Year 2018-19	Financial Year 2019-20
Multiple locations (10 nos.) *	Rs. 7.70 Lakh	Rs. 66.80 Lakh	Rs. 172.00 Lakh

* 50% camps in Project areas and other 50% in other areas/districts

9.2 Socio Economic profile of beneficiaries

The camps were organized at Schools, villages and other public places. The beneficiaries of the programme were all the people living in the villages, students and teachers in school and all the people in project and non-project areas.

Table 30 Male and female beneficiaries in project sites

9.3 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 31 Key Observations, Impacts and Suggestions

Project Sites	Key observations	Impacts of the Projects	Suggestions for improvement
DSHEP	The majority of camps were held in schools. The students of the schools adhered to the advice presented at the camp. Teachers appear to have forgotten about the ayurvedic awareness camp schedule. The principal of the school followed the diet plan outlined in the book provided	As young minds, students are encouraged to follow the ayurvedic lifestyle to the best of their ability.	To make the programmes memorable and to promote an ayurvedic lifestyle, the camp can offer the beneficiaries free ayurvedic products. In order to maximize the impact of the programme, the implementing agency

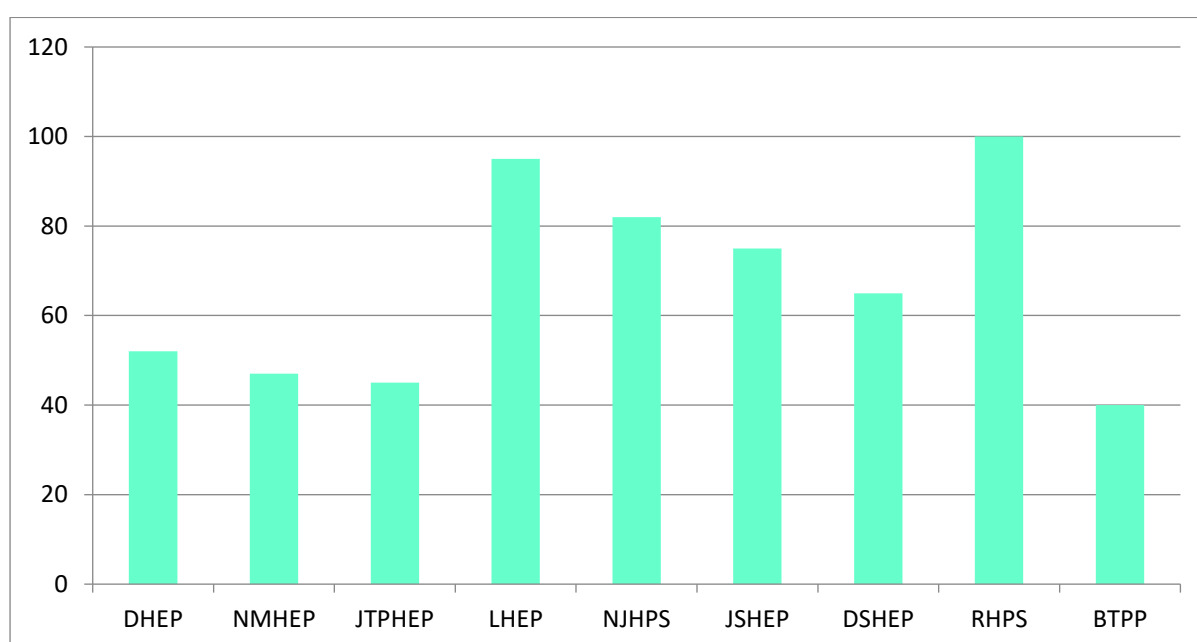

Project Sites	Key observations	Impacts of the Projects	Suggestions for improvement
	by camp organizers to camp participants.		must ensure proper programme follow-up.
RHPS	The camps were observed mainly in the schools.	The students in the schools are now aware of ayurvedic and healthy lifestyles and are attempting to follow the tips and tricks of Ayurveda according to the Ayurveda book they received at the camp.	These camps should be held in the schools every month for the students to be more aware about a healthy and natural lifestyle and adopt it at a young age. Camps should be organized in the villages to connect the people.
BTPP	In Buxar the camps were organized at the village level. The beneficiaries find it hard to recall about the ayurvedic camp yet after getting a glimpse of the book on Ayurveda, the beneficiaries received in the camp, they responded that they follow the food recipes given in the book in day-to-day life to control various diseases such as B.P., Diabetes etc.	The beneficiaries are able to connect to the healthy lifestyle and are following aspects of it without being fully aware about the ayurvedic lifestyle.	Provision of a follow-up camp to motivate people and further to strengthening their trust in the ayurvedic lifestyle.
LHEP	Ayurvedic camps have been organized in the villages. The	People follow simple exercises and food	Follow-up camp should be organized to aware

Project Sites	Key observations	Impacts of the Projects	Suggestions for improvement
	villagers also received a complementary book on ayurvedic life and food recipes related to it. Some of the villagers follow the exercises and the food recipes given in the book. Some of the villagers are not keen about the initiative as they are not provided some kind of ayurvedic medicine for free in the camps.	recipes in day-to-day life and prevent diseases that can occur from sedentary lifestyle. A part of the beneficiaries perceives the initiative negatively due to not getting any complementary ayurvedic medicines.	people more about the concept of Ayurveda and also about the Ayurvedic medicine to eradicate negativity from the minds of people about not getting the medicines for free.
NJHPS	Ayurvedic camps had been organized in various villages and schools in the area, also the beneficiaries received a book regarding Ayurveda containing exercises and food recipes.	People who were among the beneficiaries from the camps were now aware about a lot of aspects of Ayurveda and are following the manual provided by the organizing committee of the camp. People are following natural diets and exercises to curb the negative effects of their present	Follow-up camps should be organized to teach more about the ayurvedic way of dealing with the problems like B.P., Sugar etc. in a more ayurvedic way. Awareness camp for knowledge regarding ‘unhealthy lifestyle and its impacts on the human body’ should also be conducted as a follow-up camp, to motivate

Project Sites	Key observations	Impacts of the Projects	Suggestions for improvement
		health problems such as B.P., Sugar, Asthma etc.	people further regarding Ayurveda.
NMHEP	The camps were organized at village levels. The villagers got to learn about various healthy food recipes, exercises to keep them fit and healthy. People receive a book for the various food recipes.	People follow exercises and food recipes to prevent diseases that can happen due to sedentary lifestyle. People follow the food recipes for their families.	Follow up camps to motivate people further about including Ayurveda in their lives to become healthy and happy.
JTPHEP	The camps were organized in schools for the villagers. A Vaid was present to teach the people about Ayurveda and how it is beneficial for people. Various exercises were taught to the people for a healthy	People follow the various exercises in their day to day lives to stay healthy and fit.	Follow up camps to motivate people further for the cause and to stay fit.
JSHEP	The camps were organized at village levels. People were taught about Ayurveda and natural living style. Apart from that, people were shown some exercises and they	People follow the food recipes and exercises to keep fit. People have shown interest in the ayurvedic lifestyle of living.	To increase the effectiveness of the programme some of the ayurvedic products

Project Sites	Key observations	Impacts of the Projects	Suggestions for improvement
	can perform to stay fit. Books for food recipes were distributed among the people.		
DHEP	The camps were organized at village and school levels. People were taught about Ayurveda and its benefits. Books for healthy food recipes were distributed among people.	People got aware about Ayurveda lifestyle and were following the book recipes for cooking healthier food.	Follow up camps to make people aware about different aspects of Ayurveda can be organized.

9.4 Satisfied beneficiaries with the Ayurvedic camp

Source: Primary Survey

Figure 20 Level of beneficiary satisfaction with Ayurvedic Camp

This section discusses the percentage of beneficiaries satisfied with the camp at different

locations in the project areas. From the below diagram it can be observed that people in RHPS have the most satisfied beneficiaries from the programme i.e., 100%, followed by LHEP with 95% satisfied people and NJHPS with 82% satisfied people. NMHEP, JTPHEP and BTPP have the least satisfied people with 47%, 45% and 40% respectively.

9.5 Details of Ayurvedic Health Camps

The following table provides the details of number of Ayurvedic camps organized through Bharatiya Dharohar and the number of beneficiaries of the program from 2017-18 to 2019-20.

Table 32 Details of Ayurvedic Camp

Financial Year	No. of camps	No. of beneficiaries
2017-2018	30	3406
2018-2019	200	22811
2019-2020	500	75005
Total	730	1,01,222

9.6 Assessment of the initiative (OECD)

Table 33 Assessment of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	The programme is relevant in its approach to aware and motivate people towards a more natural and sustainable lifestyle in the generation where people are highly westernized in their approaches and are following them, even in remote areas of the country. Ayurvedic camp is one initiative to connect people with their roots and natural' medicine and lifestyle. As a concept the Ayurvedic awareness camps are quite relevant since Ayurveda provides safe, effective, and simple remedies for ailments and health issues.
Effectiveness	Medium	The ayurvedic camps were able to influence the minds of the people especially young minds i.e., children towards ayurveda

Parameter	Scale	Description
		and its healthy lifestyle. The programmes left a mark on the minds of the people especially with the manual provided during the programmes. People in the targeted areas are now aware about the ayurvedic lifestyle. The ayurvedic camps have been effective to an extent in inculcating some good habits in daily lives of the beneficiaries and teaching them the benefits of Ayurveda.
Impact	Medium	The people who've attended the camps were inclined towards this lifestyle. They are following healthy diets and exercises in their daily lives. People are also becoming conscious and active to curb their long-term diseases like Sugar, B.P., Asthma through the ayurvedic lifestyle. Apart from that, even children who are the future of our country are also inclined towards the lifestyle and are developing interest in following it in the future too. The impact of the camps is low to medium since only some of the beneficiaries are practicing ayurvedic ways of living after attending the camps. The camp is only organized once a year which is not sufficient to have substantive impact on the health for the beneficiaries. Moreover, there is no other incentive such as free medication, provision of medicinal plants etc. to have an enhanced positive impact on the local communities.
Coherence	High	The concept of the camp is compatible with various health policies of the government and health and nutrition is also the common theme of CSR of CPSEs in 2019-2020. The potential of Ayurveda has been substantially supported by the National Health Policy (NHP) 2017 within a diverse system of integrative healthcare. This initiative aligns with the CSR theme of "School education, healthcare and nutrition" of the year 2019-20 and is also aligned with the SDG- 3 i.e., good health and wellbeing.

Parameter	Scale	Description
Efficiency	Medium	Majority of people who've attended the camps were inclined towards the ayurvedic lifestyle. In one way or another people are trying to pick up on ayurvedic practices in their lifestyle. People are also aware about the benefits of leading an ayurvedic lifestyle in comparison to the sedentary lifestyle.
Sustainability	Medium	The camps have left a mark in the minds of the people, yet there should be some sessions with further information regarding the lifestyle in repeated areas, to strengthen people's beliefs in the ayurvedic lifestyle. Also conducting a series of camps in a single place is the way to make the approach more sustainable in nature. The Ayurvedic camps are not sustainable since it is only a one-time awareness camp. While it requires a significant amount of financial assistance from SJVN to organize these camps, takeaway from these camps for the beneficiaries is very limited and there is no follow-up on the continuation of the ayurvedic practices.

9.7 Average Rating of Ayurvedic Health Camps Given by Beneficiaries

Reviewing programmes and services is essential because it enables organisations to better comprehend the needs of their beneficiaries and to adapt their initiatives accordingly. On a scale of 5, beneficiaries at each project site were asked to rate the Ayurvedic Awareness Camps organised by Bharatiya Dharohar. Following is a table containing the average site-by-site ratings for the campground. The table reveals that the average rating for Ayurvedic camps is highest for RHEP at 4.77 and lowest for BTPP at 3.22.

Table 34 Average rating of the project

S.No.	Project Sites	Average Rating
1	Rampur Hydro Power Station	4.77
2	Luhri Hydro Electric Project	4.65

3	Naptha Jhakri Hydro Power Station	4.35
4	Jangi Thopan Hydro Electric Project	4.23
5	Dhaluasidh Hydro Electric Project	4.10
6	Devsari Hydro Electric Project	4.00
7	Natwar Mori Hydro Electric Project	3.38
8	Jakhol Sankari Hydro Electric Project	3.38
9	Buxar Thermal Power Project	3.22

9.8 Conclusion

Changing and compelled circumstances force people to consume prepared foods, get less sleep, and spend more time under stress, resulting in health and behavioral issues. This initiative of Bhartiya Dharohar, financially supported by SJVN, has educated people about the ayurvedic lifestyle, which connects them to natural living and employs Indian traditional medicine and lifestyle derived from nature. The message that the ayurvedic lifestyle is one of the ways forward has been effectively communicated.

It is recommended that a baseline study be conducted and targeted groups be treated in order to measure actual gains. The current project is intended as a campaign cum awareness camp and may be further developed using a project-based methodology to collect pre- and post-benefits.

Photo Gallery

10. Overall Conclusion and Way forward

The SJVN Ltd CSR projects completed in 2019-2020 have satisfied the beneficiaries' requirements and are satisfactory. The CSR projects with a value of Rs 100 lakhs or more have created sufficient infrastructure and offered a wide range of services. The impact assessment included the following projects:

- Providing financial support to ITI, Berthin, Bilaspur (HP)
- Providing financial support to ITI, Bangana, Una (HP)
- Construction of hostel building at Saraswati Vidhya Mandir, Vikasnagar, Shimla, HP
- SJVN Silver Jubilee Merit Scholarship scheme
- Installation of 23,000/- twin bin dustbin (110-liter Capacity) in Shimla and Mandi Parliamentary Constituencies of HP under Swachh Bharat Abhiyan
- Organizing of Ayurvedic Health Awareness camps through Bhartiya Dharohar

The **construction of buildings for ITI, Bilaspur and ITI, Una** was necessary for the addition of students and new programmes. The ITIs are now able to offer additional courses and admit more students. The institute's building provided additional space for work and extracurricular activities for institute students. This building's construction benefited not only the administration of the institute, but also students from disadvantaged segments of society. More than 400 students were able to enrol in both institutes and earn technical certificates as a result of the improved and expanded infrastructure.

The **construction of a new hostel at Saraswati Vidya Mandir** was of the utmost importance to the hostel residents because the old building was overcrowded and congested. The new hostel building is equipped with every amenity required by hostellers. The new space is well-

constructed and roomy, with sufficient space to accommodate more hostel guests. Students residing in the dormitory were satisfied with the SJVN-funded facilities.

Under **the SJVN Silver Jubilee Scholarship Scheme**, meritorious students were awarded scholarships for completion of course without placing a financial burden on their parents. The students are extremely pleased with the initiative and believe that such initiatives promote education and foster a healthy environment for students to earn the highest possible grades.

The installation of 23,000 dustbins by SJVN was one of the organization's flagship projects. Many locations in Shimla and Mandi were outfitted with pairs of trash cans. The installation of dustbins has increased people's awareness of proper waste disposal and consequently reduced littering on the streets. However, due to the short lifespan of dustbins and weather-related damage, the dustbins are in poor condition.

A CSR project designed for an **Ayurvedic camp** raised awareness of natural health practices in diverse project and non-project areas. The implementation agency had conducted 500 awareness programmes in FY 2019-20 and covered nine project areas, namely NJHPS, RHPS, LHEP, BTPP, DSHEP, DHEP, NMHEP, JSHEP and NJHPS during the course of the year. People are now aware of the ayurvedic lifestyle in the areas where the camps were held and are incorporating at least one aspect of it into their daily lives. The populace is content with this initiative.

Overall, we can conclude that SJVN's CSR initiatives were successful in building educational infrastructure, promoting and supporting higher education, creating health awareness through ayurvedic means and methods, and bringing substantial changes to the lives of project-affected individuals in project operational areas. Regarding its brand and name, SJVN has created unquestionable public goodwill.

It is also suggested that local panchayats and government agencies be included in the process of ensuring sustainability by transferring newly created assets to the appropriate agencies. In addition, there is a need for a robust monitoring and evaluation system for the implementing agency in order to drive the project for effective output and outcomes, as well as to maintain data and reporting for verification purposes, as may be required for any additional studies.

Going forward it is advisable that:

The proper institutionalization and networking with the local self-government and line departments are required for the effective implementation and sustainability of the project such as Solar Street lights, Dustbins etc.

For ensuring sustainability, implementing agency should develop a smooth handing over process for the continuation and maintenance of facilities created.

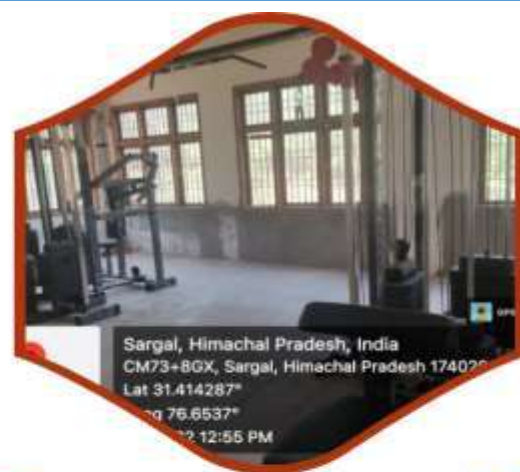

Baseline studies are required to be more objective and focused.

The use of technology such as GIS, and geo-tagging is advisable for the infrastructure created to assess any change easily and in a cost-effective manner.

Convergences with government schemes are also recommended for greater impact and maintenance of assets/infrastructure created.

SUCCESS STORIES

SJVN Silver Jubilee Merit Scholarship Scheme

Name: Arpan Thakur

Age: 25 years

Sex: Male

Benefit: Received silver jubilee merit scholarship

Arpan Sharma was born and raised in the Hamirpur district of Himachal Pradesh. His family is from the lower middle class. He has always been interested in pursuing a career in engineering, but due to his financial situation, he finds the idea implausible. He was an incredibly talented student who was able to achieve his aim of improving his family's financial status due to his own diligence. He passed high school in 2015 with a 94 percent GPA and applied for the SJVN Silver Jubilee Merit Scholarship. As a result of receiving the scholarship, he was able to pursue civil engineering at NIT Hamirpur.

He received a yearly stipend of Rs. 24,000/- until completion of degree. Thanks to the campus employment programme at that university, he was hired by a civil engineering firm at NIT Hamirpur, with a monthly salary of Rs. 35,000/-. He continues to work harder and is now employed by Tata Projects, where he makes a substantially higher income and can provide for his family's financial needs. He thanked SJVN for providing him with the opportunity to achieve financial independence. This was only made possible with the help of the scholarship.

*SJVN Silver Jubilee Merit Scholarship Scheme***Name:** Amita Rawat**Age:** 26 years**Sex:** Female**Benefit:** Received silver jubilee merit scholarship

Amita Rawat belongs to Purola, Uttarkashi. Currently she is 26 years old. She was raised in a home that was considered to be in the middle class, and both of her parents held full-time jobs. She has always admired her parents for the way in which they have worked so diligently to provide for their family despite having a large joint family consisting of seven people. Throughout her academic career, she had a goal of one day becoming a teacher because she was an exceptionally bright and diligent student.

She submitted her application for the Silver Jubilee Scholarship Program in 2015 and was awarded a yearly stipend of 24,000/- to go toward the cost of her education while she was enrolled in school. She graduated from GB Pant University of Agri and Technology with a Bachelor of Technology degree in Civil Engineering. She obtained a position in Wipro at the entry level through a campus placement programme. She was offered a position as a professor at the K.R. Mangalam University in Gurugram in the month of February 2022. During interview, she disclosed that in the future she plans to study further and eventually work as a permanent professor, despite the fact that she is currently serving in the role of an ad hoc assistant professor. She was also very appreciative of SJVN for providing her with the opportunity to make her aspirations a reality.

SJVN Silver Jubilee Merit Scholarship Scheme

Name: Simple Kumari

Age: 25 years

Sex: Female

Benefit: Received silver jubilee merit scholarship

Simple Kumari belongs to Chausa, Bihar. She is a member of a BPL family. Her father was a plumber, while her mother was a housekeeper. She was a gifted student who was able to better her financial situation due to her own efforts.

In 2015, she got a Silver Jubilee merit award for achieving an 85 percent grade point average in 12th grade. She received her Bachelor of Arts degree from MC Chausa College, where she was able to pay for her study with the scholarship. After earning her bachelor's degree, she accepted a teaching position at a nearby school and went on to earn her B.Ed. She is currently employed at Gyan Jyoti Public School near Chausa, where she earns Rs. 34,000/- per month. During her conversation with the investigator, she expressed thanks to SJVN for providing her with much-needed assistance during her academic years.

SJVN Silver Jubilee Merit Scholarship Scheme

Name: Jyoti Kumari

Age: 25 years

Sex: Female

Benefit: Received silver jubilee merit scholarship scheme

Jyoti Kumari belongs to Chausa, Bihar. She was of BPL descent. Her mother was a homemaker, while her father was a labourer. Jyoti completed her education alongside her brother at the local government school. Her family's financial position made it exceedingly difficult for her to continue her education. She was resolved to continue her education, attain financial independence, and provide for her family.

In 2015, she was awarded silver jubilee scholarship, which she utilised to fund her tuition at M.C. Inter College Chusa. Each year, for the duration of her education, she received Rs. 24,000/-. She received her Bachelor of Arts in 2018 and is currently a teacher of social sciences at Eklavya Public School. She is now making Rs. 28,000/- a month and has thanked SJVN for helping her get to this point.

Construction of building in ITI, Banagan, Una (HP)

Name: ITI, Bangana, Una (HP)

Work: Construction of building in ITI, Bangana, Una

The ITI in Bangana, Una was founded in 2002. Since its start, the institute has solely provided the Fitter and Electrician trades. Authorities deemed it necessary to enlarge the institute in order to provide additional work chances for trainers, income for the institute, the introduction of new trades, and consequently, new opportunities to admit more students in new trades. In 2007, construction began on a second building, which was finished in the 2019 fiscal year.

In 2012, SJVN contributed 1 crore rupees towards the expansion of the institute. After the completion of the building, five new long-term courses were introduced: MMV, COPA, ICTSM, plumber, fashion design, and technology, and four new short-term courses: self-employed tailor, domestic data entry operator, multi-skill technician, and plumbing trades. 221 more seats have been added to the institute's capacity. Students and school administrators are quite pleased with the initiative performed by SJVN to equip the new building with all of the necessary equipment for an educational institution.

Campus placement through ITI, Bangana, Una (HP)

Name: Vishal Sharma

Age: 21 years

Sex: Male

Vishal Kumar is a graduate of the class of 2020 from ITI, Bangana, Una. He is a native of Himachal Pradesh. His father was the sole provider for the family, supporting them by selling fruit at a roadside stand. Vishal would occasionally assist his father at his stand while pursuing his education. After graduating from high school, he enrolled at ITI, Bangana, Una. He has always been interested in computer work. He entered the ICTSM (Information and Communication Technology System Maintenance Theory) trade. Through campus placement, he was hired by M/s Livguard Batteries with a beginning monthly salary of Rs. 9900/-. After gaining employment, he completed a brief computer course and is currently earning Rs. 13,000/- a month. When asked about his experience, he stated that he is financially supporting his family together with his father, and that he is grateful to the ITI teachers that assisted him during his studies and campus placement.

Campus placement through ITI, Bangana, Una (HP)

Name: Binod Kumar

Age: 21 years

Sex: Male

Binod Kumar is from a BPL family in the state of Himachal Pradesh. His parents were both involved in agriculture. His family's annual income was approximately Rs. 45,000/- to 55,000/-. Binod also assisted his parents on farms while attending school. He was an excellent student who worked tirelessly to support his family financially.

In 2019, he enrolled at ITI, Bangana, Una to learn the trade of plumber. The institute's tuition was reasonable for his family, and he earned a monthly grant of Rs. 1,000 for belonging to the BPL group. During the training, he gained both theoretical and practical plumbing expertise. Upon graduation, he was placed at Ms. Livguard Batteries with an initial monthly salary of Rs. 10,000/-. He is able to provide for his family and is grateful to the professors at ITI, Bangana, Una for helping him attain financial independence.

Campus placement through ITI, Bangana, Una (HP)

Name: Nitin Kumar

Sex- Male

Age- 22

Location: Una

Nitin Kumar is now 20 years old, hails from the town of Una, and attended a public school for his up through the tenth grade of his education. The unstable financial situation of his family was one of the contributing factors that led to his decision to stop attending school. Since he began working for a daily wage alongside his father, he has been able to help support his family throughout this past year.

After the completion of a new building that was funded by SJVN under their CSR initiatives, the ITI Bangana has begun offering a new programme that focuses on providing certification to Computer Operators and Programming Assistance (COPA). There was a group of forty students who enrolled for this class, and according to the information provided to study team, 33 of those students received direct placement.

During FY 2018-2019, he received a BPL scholarship that allowed him to study at ITI Bangana, Una. After completing COPA trade programme (ITI), he was successful in securing a campus placement with Hero Moto Corp., which led to his eventual employment. He is very content with the skill training and attributes his accomplishments to the guidance of the instructors as well as the superior infrastructure of the institute. Because of the facilities and training provided by the institute, he is now financially independent and able to provide for his family.

INSTALLATION OF DUSTBINS

DUSTBIN IN SCHOOL – JHAKRI

Name – Government Senior Secondary School, Jhakri, Shimla (HP)

Project – Dustbins installation in school.

Jhakri Government Senior Secondary School did not have dustbins on the school grounds. As a result, the school grounds were used as a dump and began to resemble one shortly thereafter. The principal took note of the incident and alerted higher authorities about it. After receiving no response, the administrator contacted SJVN and requested that they install dustbins at the school.

In 2018-2019, as part of their CSR project, SJVN put garbage bins across the school grounds and in each classroom. As a result of the availability of and proper utilisation of dustbins, the school grounds began to clean up rapidly. The school's pupils and teachers reacted positively to this initiative, expressing delight that they may now contribute to the school's cleanliness.

DUSTBINS IN SCHOOL: GSSS, SIMAS, MANDI, HP

Name: Govt. High School, Simas, Mandi, (HP)

Project: Installation of Dustbins

Year: 2018-19

The Government High School in Simas, Mandi, did lack any dustbins on its campus. As a result, the school grounds became strewn with trash and became unsanitary. Without trash cans, school administrators were unable to teach kids about sanitation, which became a source of concern. The principal took note, but no response was received from higher authorities. Later that year, the principal made contact with SJVN.

In 2018-2019, SJVN installed twin-set dustbins on the school grounds. The dustbins were installed in the playground and at numerous other locations on the school grounds. With the addition of dustbins, the school grounds improved. The school's pupils and teachers reacted positively to this initiative, expressing delight that they may now contribute to the school's cleanliness.

INSTALLATION OF DUSTBINS – GOVT. DEGREE COLLEGE, MANDI

Location – Govt. Degree College, Mandi (HP)

Benefit – Installation of dustbins.

Year – 2017.

The Government Degree College in Dehar, Mandi opened its doors in 2017, and for several months after its opening, it struggled with problems involving the disposal of garbage generated by the provision of meals and other waste at the college. The college had only been open for a year at the time.

Later in the year, as part of its Corporate Social Responsibility (CSR) initiative, SJVN installed several sets of dry waste bins and wet waste bins on the grounds of the college. It has been determined that the college administration as well as the environment can benefit from using the twin dustbin set. The administration of the college has hired someone to empty the Twin set dustbin on a regular basis in order to eliminate the unpleasant odours that could otherwise emanate from the trash cans. The administration of the school has given a positive response to the initiative taken by SJVN to install waste receptacles on campus, stating that this has significantly contributed to an improvement in the overall cleanliness of the campus.

INSTALLATION OF DUSTBINS- BHIMA KALI TEMPLE, MANDI (HP)

Name: Bhima Kali Temple

Place: Mandi (HP)

Benefit: Installation of Dustbins

The association members of the Bhima Kali Temple in Mandi have been having problems with people throwing trash around the temple grounds whenever they visit to pray. Because of the large number of worshippers who visited the temple, there was a significant amount of trash both inside and outside of the temple. It was discovered that the premises lacked trash collection facilities, which was the most significant barrier in terms of preventing littering.

In 2017, as part of its CSR initiative, SJVN installed two sets of waste collection bins on the premises of the temple. One twin set was designated for dry waste, and the other was designated for wet waste. After their installation, the number of twin set garbage cans that were essential for maintaining the cleanliness of the temple and the grounds surrounding it was reduced. People started throwing their trash in the dustbins that were provided, which led to an increase in the general cleanliness of the location. The security guard at the temple reported that ever since the installation of waste receptacles, people's behaviors have begun to shift, and they are gradually but surely becoming accustomed to the use of waste receptacles, which contributes to the continued maintenance of a clean environment.

CONSTRUCTION OF BUILDING IN ITI – BILASPUR (HP)

Name – ITI Berthin, Bilaspur (HP)

Work – Construction of a new building on the premises.

ITI Berthin, Bilaspur was established in 2000. Since then, they have been offering only four courses (welder, electrician, mechanic, and dressmaking) at the institute. The higher authorities of the institute have, for a long time, felt the need to increase the working space in the institute to admit more students and offer more courses.

In 2012, SJVN under its CSR initiatives provided financial support of Rs. 1.00

Cr. for constructing a new building on the premises of the institute. The construction of the new building led to more students being admitted to the institute as well as the inclusion of two more courses in the institute i.e. fitter and computer operations. The new building is equipped with all the facilities needed in an educational institute, and the students and the school authorities are really happy with the initiative undertaken by SJVN.

SUCCESS COMES THROUGH HARD WORK

Project: ITI, Berthin, Bilaspur (HP)

Name: Shikha Kumari

Age: 20 years

Sex: Female

Shikha Kumari lives in Bilaspur, Himachal Pradesh. She comes from a family of the lower middle class. Her father is a shopkeeper, while her mother was a homemaker and seamstress in their household. Shikha has observed and assisted her mother while she has sewn numerous kinds of apparel since her childhood. Shikha's mother inspired her passion in stitching, and after graduating from high school, she enrolled in ITI, Berthin, Bilaspur.

She joined in a dressmaking course and learned to create various outfits. In 2020, she received her diploma after gaining a wealth of knowledge during her studies. She did not receive a college placement, but that did not prevent her from pursuing her passion for dressmaking. She began actively collaborating with her mother and has increased the variety of garments they produce. She is currently financially independent and provides for her family while working full-time from home. During the interview, she stated that even during COVID, she had a consistent income, her work was recognised in the surrounding areas, and she did not lack for work. She plans to create her own boutique in the near future, and she expressed her gratitude to the ITI instructors who helped her expand her horizons.

CONSTRUCTION OF HOSTEL BUILDING AT SARASWATI VIDYA MANDIR, VIKASNAGAR, SHIMLA (HP)

Name: Saraswati Vidya Mandir, Vikas Nagar, Shimla (HP)

Work- Construction of Hostel Building at Saraswati Vidya Mandir, Vikas Nagar

Location: Shimla

The Saraswati Vidya Mandir was established in the year 1988. Since that time, they have been offering boarding facilities to students from other states who travel to the institute for educational purposes. Due to the poor condition of the previous hostel, the higher authorities have long felt the need to expand the

amount of living space available in the hostel in order to admit a greater number of students.

During FY 2017–18, SJVN provided CSR funds to the school and built a dormitory on the grounds. The construction was finally finished in FY 2019-2020, at which point the administration of the school was able to open the hostel to male students who were interested in living in the hostel. When asked about the initiative, school officials expressed their satisfaction with SJVN's initiative, which helped more students gain admission to the hostel.

YOGA SESSIONS IN GSSS, ALAMPUR, KANGRA (HP)

Location: Government Senior Secondary School, Alampur (HP)

Benefit: Organisation of Ayurvedic Health Awareness camp

Year: 2019-2020

In the year 2019-2020, Bhartiya Dharohar organised an ayurvedic camp for students at the Government Senior Secondary School in Alampur. The goal of the camp was to increase students' awareness of ayurveda. Students were given instruction at the event on the ayurvedic lifestyle, its benefits, and the various yogic exercises that are necessary to perform in order to maintain one's good health and fitness levels.

After returning from the camp, the students approached the administration of their school with a request to incorporate a yogic exercise schedule into the daily routine of the school. Following a discussion on the matter with the school committee, the administration of the school decided to incorporate yoga into the school day on Wednesdays and Saturdays for a period of thirty minutes each. Both the students and the administration of the school are thankful to SJVN for the opportunity to participate in this ayurvedic camp in the first place. Both parties are very content with the new policy.

YOGA SESSIONS IN GSSS, NANKHARI, SHIMLA (HP)

Location: Government model senior secondary school, Nankhari, Shimla (HP)

Benefit: Organisation of ayurvedic health awareness camp

Year: 2019-20

Bhartiya Dharohar has organised an Ayurvedic Health Awareness Camp in 2019-20 at the Government Model Senior Secondary School in Nankhari, Shimla, Himachal Pradesh. The objective of the Ayurvedic Health Camp was to raise

awareness of the ancient Ayurveda-based low-cost health care system. During the camp, participants learned about the ayurveda lifestyle, various yoga activities to maintain a healthy lifestyle, various natural techniques to treat diseases, and received a cookbook with healthy food recipes.

The students and teachers were enthused by the camp, and the school administration decided to incorporate yoga into their assembly time. On Tuesdays, Thursdays, and Saturdays, the school hosted yoga classes. The school faculty has indicated that kids have responded positively to the effort. In addition, the school has organised inter-school yoga tournaments in which students have avidly participated. Students and teachers were quite pleased with the initiative.

Acknowledgement

This impact assessment report was prepared after extensive discussion and engagement with stakeholders, Ms. Geeta Kapur, Director (Personnel), Mr. Awadhesh Prasad, General Manager of CSR, and other SJVN CSR division officials. Without the assistance of the beneficiaries and implementing organizations in all of the chosen regions spread across the states of Himachal Pradesh, Bihar, Maharashtra, Uttarakhand, this study would not have been possible.

The evaluation team would like to extend its gratitude to the families, stakeholders and people's representatives from the project-affected areas throughout all of the states who volunteered their time to take part in this research. We recognize the contribution of SJVN Ltd. authorities and executing agencies for their assistance, collaboration and to with the evaluation process and team members, the representatives from head office and the entire project sites are deserving of praise.

We are appreciative to each and every member of the research team for their exceptional participation in the study, data collection efforts and dedication to rigorous research in the face of challenging circumstances including inclement weather and extensive travel.

Preface

This document is an Impact Assessment Report for three Corporate Social Responsibility (CSR) Projects that were funded by SJVN Ltd. and carried out in the states of Himachal Pradesh, Maharashtra, and Uttarakhand respectively.

This report provides a concise overview of SJVN Ltd., including its CSR policy as well as its goals. In addition, the document provides succinct information regarding each project as well as a profile of the project sites. The OECD framework for Impact Assessment, as well as SR Asia's comprehensive approach and in-depth research, were used to compile this impact assessment report.

The evaluation consisted of consulting with relevant stakeholders, conducting desk research, administering questionnaires both online and offline, going on field trips with local investigators, and taking a participatory approach. The collection of quantitative and qualitative data using ZOHO analytics is accomplished through the use of a mixed-method approach. The documentation of success stories allows for a point to be deduced regarding the social and economic gains received.

The effects of each CSR project are analyzed and documented in accordance with annexure-3 of the ToR Document.

The conclusions and recommendations for moving forward are unique to the intervention and they include insights that can be applied to upcoming endeavors.

Impact Assessment Team

The evaluators on the team were subject matter experts, seasoned CSR professionals from public sector enterprises, social scientists, economists, environmentalists, health professionals, and energy experts in the renewal energy domain, among other types of specialists.

Executive Summary

SJVN has taken the initiative to execute a variety of interventions for the local community near its plant locations as part of its CSR programming. At this juncture, the study was commissioned to conduct an assessment of the CSR program run by SJVN Limited across all of their project locations. In addition to describing the effects on beneficiaries and communities, the study sought to spot potential openings for improving the execution and oversight of ongoing initiatives and to provide solutions.

All the six CSR projects are implemented through SJVN Foundation. The aims and objective of this study is to assess the impact of the CSR projects undertaken by SJVN Ltd at various project site spread over five states in India. Three thematic areas are covered in this assessment with the following objectives:

- To assess the socio-economic impact of healthcare.
- To assess the socio-economic impact of education programs.
- To assess the socio-economic impact of skill development programs.

This impact report is a result of an extensive field work executed over five projects site in four states on three thematic areas. The study was conducted in four states respectively, Himachal Pradesh (SJVN head quarter), Buxar-Bihar, Kullu/Shimla-Himachal Pradesh, Rudrapur-Uttarakhand, Ahmednagar- Maharashtra using mix method.

A team of trained and qualified investigators had visited the CSR project sites for carrying out impact assessments of the CSR initiatives undertaken by SJVN. During the process, implementation agencies were approached and consulted for receiving necessary information and access to the beneficiaries. The impact assessment team had engaged with project beneficiaries for a detailed examination of the schemes and the range of benefits received.

The CSR initiatives had a positive impact on the overall well-being of the people living in the project areas. The overall satisfaction level of beneficiaries is more than 4.0 on a scale of 5. The CSR initiatives undertaken by SJVN have proved to be necessary and complimentary for a better quality of life for the people in the project-affected areas. The project affected people want the continuation of the schemes for sustainability.

The assessment report format has an introduction, funding details, infrastructural details, observations and impacts, beneficiaries' feedback, and pictures from the field for each initiative along with tables and figures to support the necessary for each of the initiatives. This impact assessment report has multiple thematic CSR projects such as Healthcare, Education and Skill development and social equality. This study covers six CSR projects having a project cost value of Rs.50 Lakh and more and brief details of the same are as follows.

The **Mobile Medical Units** in the report have been discussed for the site of **BTTP (MMU-1), BTTP (MMU-2), RHPS and KWPS**. Out of the households interviewed, 75% of them avail MMU services in their locality. In the year 2020-21, more than 148000 people had been benefitted through

the MMU in the four sites. The MMU is solving problem of inaccessible and high-cost medical treatments in the project areas. The beneficiary's perception of the benefits received from the mobile medical unit had been free consultation (stated by approx. 78%) and free medicine (approx. 45%) followed by free dietary plans and happiness from health. For the various factors of the mobile medical unit such as registration, services, behavior of doctors etc. had been rated by the beneficiaries on each of the aspect and an average rating of 4.0 had been provided to the mobile medical unit by the beneficiaries in the studied sites. This concept of medicine on wheels has been acceptable among the people living in the project areas. Due to MMU, now people belonging to weak economic background can avail medical treatments at their doorstep.

The **financial assistance for construction of Kanya Chhatrawas by Dudhiya Baba Sanyas Ashram** has been one-of-a-kind initiative by SJVN. The objective of the program is to provide a safe environment for the overall development of the girl child of the Leprosy patients, living in the hostel. This initiative is undertaken to support the girl child of weak economic background and whose parents were suffering from leprosy. The funding supported construction of the first floor of the hostel building comprising of five living rooms with a 16-bed capacity in each room, one study room, one computer lab, one meditation hall & 37 washrooms and bathrooms. The hostel has been a boon for the girls and proved to be an important place for their growth and development and to venture into mainstream. It provides accommodation and mess facility to total 185 students. In this hostel, there is provision of playing and entertainment. During every summer vacation hostel authorities organizes trips with all safety and emergency measures to various places such as Jim Corbett National Park, religious places to invoke their interest in the hostel. The hostel also arranges training programs which are vocational in nature. This initiative had been a first by SJVN to meet an excellent cause and detach the girl children from the social stigma that they are attached to due to their parents and provide them a safe environment and growth to venture into mainstream.

The farmer training through CSK, Palampur on various farming techniques directly or indirectly addresses the real-life issues in the lives of farmers such as increase in yields, effect of climate change, produce increase, income generation etc. The training is 6-day program in which more than 750 farmers participated. The training was aimed to motivate farmers to start their own enterprise using modern methods in agriculture and horticulture. The program had been successful to motivate people to start their own enterprise. The initiative had been a major success as 25% of the trainees started their own farming related venture whereas 45% of the trainees are going to start their ventures in the coming year. The objective of the training has been met and the program had been a major success. An average rating of 3.52% of the training program on various factors such as accessibility to training center, trainer's competence, language of communication, overall effectiveness etc. had been given by the trainees. The initiative had positive impact on the overall well-being of the people's living in the identified areas.

The initiatives undertaken by SJVN as their CSR practices have been proved to be beneficial for the people in the project affected areas.

CHAPTER 1- SCOPE OF IMPACT ASSESSMENT

1.1 Introduction

The objective of Impact Assessment is to improve sustainable outcomes and impacts of any project/scheme/intervention/ policy etc. It is also to enable and improve effectiveness, efficiency, equity, and sustainability of service delivery. Additionally, the outcomes and impacts of any programs. The process involves the identification and characterization of the most likely impacts of proposed actions (impact prediction/forecasting), and an assessment of the social significance of those impacts (impact evaluation).

Overall, the CSR projects implemented by SJVN are in line with ¹Schedule VII of The Companies Act 2013. The CSR policy of SJVN is also in line with The Companies Act, 2013. This is well identified in view of the national policy, CSR policy, needs the aspirations of the people, and areas where they operate. These projects had a positive impact on the life of project-affected people.

The impact is assessed and compared against the planned benchmarks fixed at the time of planning to gauge the degree of success or failure of the CSR initiatives. Team used ZOHO survey tool for conducting the survey and its real time monitoring. Video-graphic and Photographic records of the progress, achievements and impacts are systematically documented. Research team also noted the fieldwork observations and prepared case studies as per given instructions. The team conducted stakeholder consultation with implementing partners, local representatives and other line departments to understand more about the projects, its impact and sustainability strategy to ensure long term goals. SR Asia has used the OECD DAC framework for evaluating the impact created by the CSR projects of SJVN. It scores all the projects under study based on its relevance, effectiveness, efficiency, coherence, impact and sustainability parameters.

1.2 About Impact Assessment Agency

Social Responsibility Asia (SR Asia) is an ISO 9001: 2015 Certified international non-profit organization registered with Ministry of Corporate Affairs (MCA) New Delhi, India, 2012. It has legal entities in Bangladesh and Indonesia. SR Asia has country representative offices in Mongolia, Malaysia, Philippines and Vietnam. SR Asia is an affiliate to Asian Productivity Organization (APO) Japan and also works closely with APO member National Productivity Organization in complementing and promoting CSR, Sustainability and Sustainable Development.

SR Asia's mission is to conserve natural resources for the welfare of current and future generations by promoting change. SR Asia wants to work with all stakeholders to create awareness among consumers and manufacturers. We want to reach out to consumers through campaigns and work with companies in the design, development, and production of sustainable goods and services.

¹ https://www.mca.gov.in/content/mca/global/en/acts-rules/ebooks/acts.html?act=NTk2MQ==#Schedule_VII_Activities_Which_May_be_Included_by_Companies_in_their_Corporate_Social_Responsibility_Policies

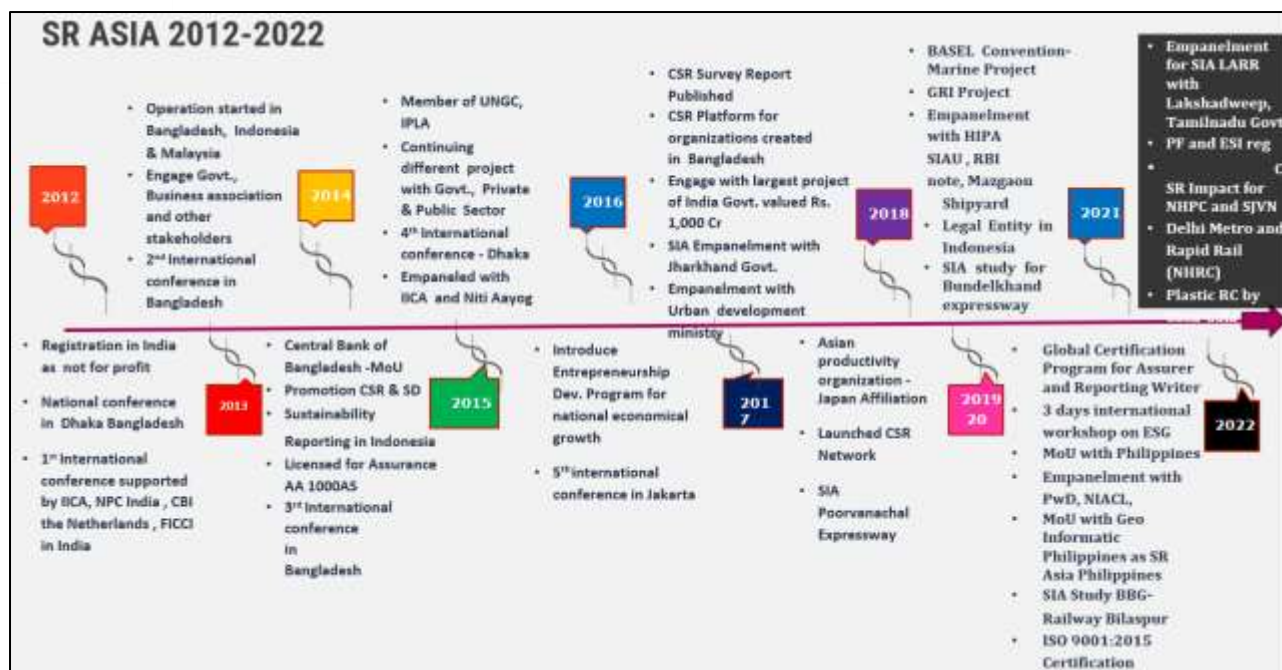

Figure 1 About SR Asia

1.3 Scope of work as per ToR

Purpose of the Study

The purpose of this study is to evaluate the socioeconomic impact of SJVN Limited's CSR initiatives.

Objective of the Study

- To assess the socio-economic impact of health and hygiene programs.
- To evaluate the socio-economic impact of education and skill development programs.
- To assess the socio-economic impact of social welfare measures provided for senior citizens, children and other sections of the society and women empowerment etc.
- To assess the socio-economic impact of the CSR initiatives undertaken in the areas of preservation and promotion of culture and sports.
- To assess the socio-economic impact of infrastructure and community development programs.
- To evaluate the socio-economic impact of sustainable development programs I carried out by SJVN.
- To assess the socio-economic impact of the CSR initiatives undertaken in the areas of natural disaster and COVID-19 related activities carried out by SJVN.

Rational of Study

SJVN has undertaken a plethora of CSR activities. However, the ultimate test of the success of any CSR and Sustainability activity project is the socio, economic or environmental impact thereof.

Every such activity is planned and implemented with some anticipated impact on society or environment. It is against such perception and expectation impact that the completed activity / project should be measured to ascertain the degree of its success, or failure. As per the amendment CSR Rules 2021, all CSR interventions of more than rupees 1.00 Cr and completed not less than one year of time, should be evaluated for its impact. Under CSR Policy of SJVN also provision has been kept for impact evaluation of all those CSR initiatives of cost more than rupees 50.00 lakh. Therefore, the public sector companies should get an assessment done of the social / economic/environmental impact of their CSR and Sustainability activities after the same are completed. From the point of view of SJVN, impact evaluation will help in documenting the good model projects undertaken by CSR wing and provide due recognition to the company for its splendid efforts. It will also be helpful in identifying the gaps in company the project implementation and recommend corrective measures.

The scope of work of impact assessment of six CSR initiatives undertaken by SJVN in the year 2020-21. The CSR projects included in the report are valued more than Rs. 50 lakhs in the year 2020-21 according to the annexure-3 of the ToR document.

The three thematic areas in the report are healthcare, education and skill development.

1. Health care, there are four projects as mentioned below:

- RHPS Running of 01 MMU in project areas through HelpAge India.
- BTPP-1 Running of 01 MMU in project areas through HelpAge India.
- BTPP-2 Running of 01 MMU in project areas through HelpAge India.
- KWPS Running of 01 MMU in project areas through HelpAge India.

2. Education:

- Construction of “Kanya Chhatrawas” at Dhudhia Baba Sanyas Ashram

3. Skill Development:

- Farmers training through CSK, Palampur on various farming techniques.

The proposed study will be a learning document for SJVN to introspect on both its goal and achievement in CSR programs. It will also suggest steps for its better implementation document, which will be used by SJVN for both internal and external purpose. It will also include at least 4-5 success stories along with relevant photographs.

The impact evaluation study of the CSR and Sustainability activities will be carried out by SR Asia. The evaluation report will reveal the effectiveness of CSR and Sustainability programs of SJVN. The findings from such studies will help to frame appropriate corrective measures.

The impact assessment report will commence with the introduction of all CSR projects, their funding details, infrastructural details, socio-economic profile of beneficiaries, observations, impacts, beneficiaries’ feedback, pictures from the field for each initiative and assessment through primary data along with tables and figures followed by conclusion or key findings from primary research and triangulates the same with field observations. Each of the CSR intervention will be assessed as per OECD Model (Relevance, Effectiveness, Impact, Coherence, Efficiency, and Sustainability).

Impact Assessment of CSR Projects FY 2020-21

The details regarding the individual initiatives will be discussed in the specific project section. Further the impact assessment of all completed projects/programs/activities during a year having value of Rs. 50 Lakh or more as per clause- 11(B) of revised CSR & sustainability policy of SJVN is detailed below.

Detail of Completed CSR Projects during FY, 2020-21 Having Value of Rs. 50 Lakh or More In Compliance to Clause- 11(B) of ²Revised CSR & Sustainability Policy of SJVN

S. No	Name of Project	Location	Vertical	Name of Activity	Year of start	Year of Completion	INR in Lakh	Remarks
1.	RHPS	Kullu/ Shimla	Healthcare	RHPS- Running of 01 MMU	2014/ 2017	2020	72.00	Project completed
2.	BTPP	Buxar (Bihar)	Healthcare	BTPP-1- Running of 01 MMU	2014/ 2017	2020	72.00	Project completed
3.	BTPP	Buxar (Bihar)	Healthcare	BTPP-2- Running of 01 MMU	2014/ 2017	2020	72.00	Project completed
4.	KWPS	Ahamadnagar (Maharashtra)	Health care	KWPS- Running of 01 MMU	2014/ 2017	2020	72.00	Project completed
5.	Corporate Office Shimla	Uttarakhand	Education	Financial support to Sh. Dhudhia Baba Sanyas Ashram for construction of Chhatrawas Bhawan	2017	2020	185.00	Project completed
6.	HP Projects areas	Farmers of project affected areas and HP	Skill development	Farming training through CSK, Palampur	2019	2020	62.51	Project completed

Table 1 Details of Completed CSR Projects during FY 2021

CHAPTER 2- ABOUT SJVN LTD.

2.1 Introduction

SJVN Limited, a Mini Ratna, Category-I and Schedule-‘A’ CPSE under the administrative control of Ministry of Power, Govt. of India, was incorporated on May 24, 1988, as a joint venture of the Government of India (GOI) and the Government of Himachal Pradesh (GOHP). Beginning with a single project and single State operation (i.e., India’s largest 1500 MW Nathpa Jhakri Hydro Power Station in Himachal Pradesh) the Company has commissioned five projects totaling 2015.2 MW of installed capacity including wind and solar power.

SJVN is presently implementing power projects in Himachal Pradesh, Uttarakhand, Bihar, Maharashtra and Gujarat in India besides neighboring countries viz. Nepal and Bhutan. SJVN envisions a best-in-class Indian Power Company, globally admired for developing affordable clean power and sustainable value to all stakeholders. SJVN's CSR initiatives are based on the notion that a business cannot prosper unless the society in which it operates also develops. The principles that guide the organization's CSR attitude are government directives, Millennium Development Goals (MDG's), the human rights perspective, and the national agenda.

2.2 SJVN's CSR Journey

SJVN Ltd. was established on May 24, 1988 as a joint venture between the governments of India and Himachal Pradesh with the goal of planning, researching, organizing, carrying out, and maintaining electricity projects. Since the largest underground 1500 MW Nathpa Jhakri Hydro Electric Power Project was put into service, SJVN has expanded its base from a single project to multiple projects in the hydro, thermal wind, and solar energy sectors.

The goal is to transform India into a source of future energy and a powerhouse. SJVN aims to meaningfully contribute to the improvement of social infrastructure and the sustained socio-economic development of communities by embracing corporate social responsibility. The Companies Act of 2013 and the CSR guidelines published by the Ministry of Corporate Affairs, the Ministry of Heavy Industries and Public Enterprises, and the GOI have served as the foundation for the development of SJVN's CSR Policy. SJVN is devoted to address the issues raised by its stakeholders and works to uphold high standards of corporate social responsibility (CSR) in all of its business endeavors. SJVN respects the rule of law, local communities, and society at large in order to uphold his promise, and through its CSR programs, it is actively working to improve people's quality of life.

The foundation of SJVN is in the hydroelectric power projects. These are situated in remote mountainous areas with limited infrastructure and a socioeconomically underdeveloped population. SJVN strives to have an overall good impact on the societies residing in such areas as a responsible corporate citizen. Since 2009, SJVN has appointed reputable civil society organizations to execute CSR programs in the communities affected by its project. SJVN participates in the CSR initiatives in the various industries as outlined in Schedule-VII of the Companies Act of 2013, which are Health, Hygiene, Education, Skill Development, Empowerment of Vulnerable Section of Society,

Infrastructure Development and Community Development, Preservation and Promotion of Culture and Sports, Sustainable Development, Assistance during Natural Disasters etc.

2.3 SJVN approach for CSR and Sustainability

Power projects are located in far reaches of isolated regions which are scarce in infrastructural facilities and where the populace is socio-economically backward. SJVN being a responsible corporate citizen strives to bring about overall positive impact on societies living in such regions. Besides, it's CSR and Sustainability activities, SJVN will also cover a wide range of issues relevant to the larger society and of activities that could have a lasting impact. SJVN endeavors to leverage green technology, processes and Standards to produce goods and services that contribute to social and environment sustainability CSR programs in SJVN shall not be adjunct to R&R activities. Further CSR activities shall not include the activities undertaken in pursuance of normal course of business of SJVN.

- ***Vision***

To be the best-in-class Indian power company, globally admired for developing affordable clean power and sustainable value to all stakeholders.

- ***Mission***

To drive socio-economic growth and optimize shareholders and stakeholders interest by:

- Developing and operating projects in cost effective and socio-environment friendly manner.
- Nurturing human resources talent with care.
- Adopting innovative practices for technological excellence.
- Focusing on continuous growth and diversification.

- ***Objectives***

SJVN is dedicated to its stakeholders' concerns and seeks to uphold high standards of Corporate Social Responsibility (CSR) and Sustainability in its operations. To accomplish this commitment, SJVN will uphold the rule of law, local communities, and society at large, and will use its CSR and Sustainability programs to make intentional efforts to improve quality of life and environmental sustainability.

2.4 SJVN Foundation

The SJVN Foundation was founded in 2011 to formalize SJVN's efforts to improve the quality of life in the communities surrounding its Project locations. SJVN believes that economic success and community relationships are inextricably linked and that both must be pursued simultaneously. Because societal and community development is driven by the firm's philosophy, SJVN has been executing social development programs for communities in and around its Project locations before establishing the SJVN Foundation.

- ***Vision***

"To make people and earth partners in our growth"

• *Mission*

“SJVN is pledged to fulfill its social and environmental commitments; because we know that our growth is meaningful when we share it with society”

SJVN has formulated and adopted its Corporate Social Responsibility Policy in November 2011 in consonance with the CSR guidelines issued by DPE, Ministry of Heavy Industries. CSR activities for community is carried out in a structured manner through a Trust registered as “SJVN Foundation”.

The foundation has played a key role in organizing efforts for community development, creating successful stakeholder relationships, assuring efficient service delivery, and fostering smooth community interactions. The foundation has addressed a wide range of developing social challenges by planning and implementing intervention projects in health care, community infrastructure development, disaster relief, skill development, sustainable development, and upliftment of marginalized communities such as women and differently abled people. SJVN has been able to connect with the local population, the weak and underprivileged sectors of society, and contribute to improving their quality of life through the implementation of these proactive programs.

SJVN Foundation has evolved as a leading and respectable institution engaged in planning and effectively implementing need-based citizen-centric social welfare plans and programs in barely five years of existence. The creation of the Village Development Advisory Committee (VDAC), which ensures public engagement from the stage of identifying and formulating any CSR activity to be undertaken, to the finality of implementation and execution, has been the USP of CSR interventions at SJVN.

CHAPTER 3- APPROACH AND METHODOLOGY

3.1 Introduction

This chapter provides a brief introduction to the study, its rationale, its objective, survey questions, sampling, data collection, and limitations. It is necessary, therefore, to have a comprehensive understanding of the research process that was followed in order to provide a rationale and a context for the findings of the study.

3.2 Objectives of Impact Assessment

The evaluation of the social and economic effects of the Corporate Social Responsibility (CSR) programmes carried out by SJVN Limited is the goal of this study. This study aims to assess the impact and sustainability of the projects that are currently being implemented, find the strengths, weaknesses, and deficiencies in the project implementation, and determine the benefits received by the targeted groups. This will allow the impact of these projects to be measured, and the learning gained from this study will be used in the design and implementation of future CSR projects. One of the primary goals is to determine the socioeconomic effects of the education, training, and healthcare programmes that are being implemented.

3.3 Impact Assessment Approach of SR Asia

SR Asia's primary focus is on providing all of its partners with an exceptional customer service experience. Our goal is to provide a higher value for our customers while adhering to a consistent set of best practices. This CSR assessment is being carried out with the intention of conducting a socio-economic impact assessment of CSR initiatives that have been carried out by SJVN.

In order to make a complete accounting of all of the socioeconomic benefits that were accrued by beneficiaries, a holistic strategy was applied to the current assignment. A description of our strategic approach, which is a combination of technical and sectoral expertise, connected thinking to leverage the network of SR Asia, and a participatory approach bringing all of the stakeholders together for a holistic assessment, is provided below. This approach is described as a "blended approach," and it includes all of these elements in Fig 3.

Objective, challenged and balanced perspective

- We have looked objectively into project benefits received by the beneficiaries, we have reflected in a balanced and sensitive manner, the views of all related stakeholders while using suitable quantitative and qualitative tools for the assessment.

Technical leads will be sector experts

- We structured our impact evaluation team with experts in socio-economic impact assessment, social science, economics, education, health, gender, and sustainability. The team members have significant prior experience in CSR conducting impact assessment.

Connected thinking

- SR Asia has the leverage of working in similar sector within India that we utilized in conducting this assessment. We have access to numerous best practices and share region specific learnings with teams within the organisation.

Participatory approach

- We consulted with the client and other key stakeholders throughout the engagement. The purpose of these consultations was to test the agreed approach and findings, and to invite the key stakeholders to provide their input into the entire process.

Figure 2 Holistic approach by SR Asia

3.4 5-P Approach for Assignment Execution

The 5-P approach is being used by SR Asia for the current impact assessment, which is described in more detail below. The five-point plan is an all-encompassing methodology that can assist in outlining important steps that should be taken at various stages of the project life cycle. The team began the engagement by conducting in-depth research of all of the project documentation. This research assisted the team in acquiring a more in-depth understanding of the activities that were carried out as part of the project.

We developed a stakeholder engagement map in order to determine who all of the project's relevant stakeholders are, as well as how much sway each one has over the results of CSR activities. Because of this, indicators and research questions pertinent to the project were developed, with the goal of isolating the direct and indirect impacts on the lives of beneficiaries.

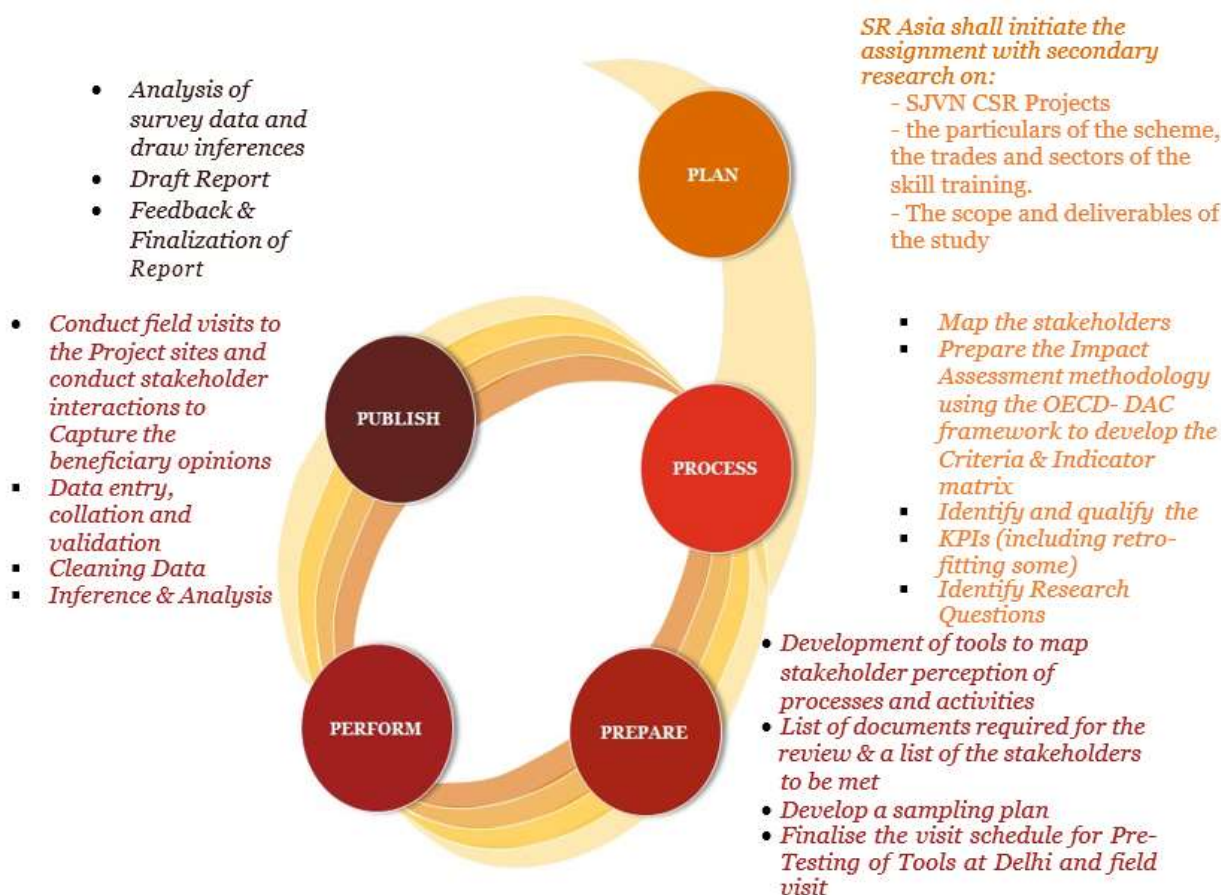

Figure 3 Five- P approach for assignment execution

Based on the 5-P approach, SR Asia has used its process evaluation framework to help SJVN measure and report on the impacts of its CSR projects and activities along with engaging with all the involved stakeholders to holistically assess the impact created by the CSR initiatives.

The SR Asia team was built considering the geographical diversity and spread of the project. Different teams and team leaders were recruited for data collection in each of the states where the SJVN projects sites are located. Apart from that, since the SJVN headquarters is located in Shimla, a station office of SR Asia impact assessment team was also set up in Shimla where the project director and research associates stayed for a month. This helped the impact assessment team to coordinate with SJVN CHQ and understand client expectations throughout the process.

3.5 Approach & Methodology

An explorative research was conducted to understand the nature, design, and aspects of implemented projects for which impact assessment has to be done. This was completed primarily through desk study. Various literatures are referred to get a comprehensive knowledge about CSR project implemented areas and objectives, parameters, goals, structure, and sustainability criteria of the implemented project.

Impact Assessment of CSR Projects FY 2020-21

The literature review of secondary data and literature available such as SJVN website, baseline reports, sample monitoring and evaluation report, implementation agencies, beneficiary data and CSR Annual Reports of SJVN, media reports etc.

Preparation of data collection tools, preparation of survey questionnaires (computer and internet enabled), training of field investigators, pilot testing of tools, and data collection on site etc.

The assessment process which involves segregation of data and data analysis, evaluation, or comparison with the planned guidelines and the standards available.

Figure 4 Methodology of the Study

3.5.1 OECD DAC Framework for Measuring Sustainability

The Organization for Economic Co-operation and Development (OECD) Development Assistance Committee (DAC) first laid out the evaluation criteria (relevance, coherence effectiveness, efficiency, impact, and sustainability) in 1991. These six criteria serve as the core reference for evaluating international development and humanitarian projects, programs, and policies. These evaluation criteria have been defined below:

Figure 5 Six point criteria of OECD-DAC Framework ³Source: oecd.org

• ³ OECD.(2022)

Impact Assessment of CSR Projects FY 2020-21

- **Relevance:** The extents to which the intervention objectives and design respond to beneficiaries' needs, policies, and priorities, and continue to do so if circumstances change.
- **Coherence:** the extent to which other interventions (particularly policies) support or undermine the intervention, and vice versa. Includes internal coherence and external coherence.
- **Effectiveness:** The extent to which the intervention achieved, or is expected to achieve, its objectives, and its results, including any differential results across groups. **Efficiency:** The extent to which the intervention delivers, or is likely to deliver, results in an economic and timely way.
- **Impact:** The extent to which the intervention has generated or is expected to generate significant positive or negative, intended, or unintended, higher-level effects.
- **Sustainability:** The extent to which the net benefits of the intervention continue or are likely to continue.

The Impact Assessment team has identified some key parameters and components as necessary to apply this framework to this study, and they are indicated in table.

OECD DAC Framework		
What is it?	How it helps?	
Framework for evaluating performance of social development programs on relevance, effectiveness, convergence, and sustainability aspects	Helps in gaining qualitative understanding of the impact created, stakeholder perception, extent of collaboration with other actors and sustenance of the change	
Evaluation Criteria	Indicative questions	Key Performance Indicator
Inclusiveness	<i>To what extent do beneficiaries from all backgrounds get covered by the program?</i>	<i>Program included beneficiaries from all backgrounds, without any discrimination</i>
Relevance	<i>To what extent does the program have the capacity to meet the needs and expectations of society? To what extent does the program have the potential to facilitate participation from the community and local government in creating sustainable impact?</i>	<i>Program aligned to the needs and expectations of society and involved adequate engagement / participation from the community, linkage with SDGs, etc.</i>
Effectiveness	<i>To what extent has the program been able to create an impact on HDI profile of beneficiaries?</i>	<i>Program has significant impact on health and wellbeing status of beneficiaries, etc.</i>
Convergence	<i>To what extent does the program have the potential to link beneficiaries to government program / schemes, etc.?</i>	<i>Program involves collaboration with government or other non-government organization operating in program area</i>
Sustainability	<i>To what extent does the program have the potential to create a sustainable impact post withdrawal of REC's support?</i>	<i>Enhancement of local community/ institution skills to govern and manage programs, linkages with government/</i>

Figure 6 Criteria of OECD-DAC framework and its components

Impact Assessment of CSR Projects FY 2020-21

Weighted scores were used to develop a 6-point scale. Following criteria is applied while rating the sustainability score of CSR project impact assessment.

Rate	Qualitative assessment based on each evaluation criteria	Quantitative measurement based on the logical framework
6. Highly satisfactory	A project with overwhelmingly positive results and no shortcomings.	Level of achievement presents no shortcomings (90% - 100% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
5. Satisfactory	A project with some strong results and without material shortcomings.	Level of achievement presents minor shortcomings (70% - 89% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
4. Moderately Satisfactory	A project with a clear preponderance of positive results (i.e. it may exhibit some minor shortcomings though these should be clearly outweighed by positive aspects).	Level of achievement presents moderate shortcomings (50% - 69% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
3. Moderately Unsatisfactory	A project with either minor shortcomings across the board, or an egregious shortcoming in one criterion that outweighs other generally positive results.	Level of achievement presents some significant shortcomings (30% - 49% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
2. Unsatisfactory	A project with major shortcomings clearly outweighing positive results.	Level of achievement presents major shortcomings (10% - 29% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).
1. Highly Unsatisfactory	A project with severe shortcomings and no material redeeming positive results.	Level of achievement presents severe shortcomings (0% - 9% achievement rate of planned targets for project outcome, intermediary outcomes, and outputs).

Table 2 Sustainability score of CSR project impact assessment

3.6 Research Instruments

Mixed method research design was used in order to have a comprehensive approach in data collection and stakeholder consultation. Both the qualitative and quantitative research techniques were used. Quantitative techniques like survey questionnaire were extensive in nature and covered minimum no. of sample size as per the research standards. Qualitative research tools were used

focusing on the public consultation and in-depth engagement with project beneficiaries. After data collection, it was processed for analysis using ZOHO survey analysis tool, MS Excel and SPSS.

3.7 Data Collection

The following approach was adopted for the collection of primary and secondary data.

Primary Data:

Collection of primary data was done in the field and data collection was done in offline and online mode (ZOHO questionnaire), feedback and consultation, interviews of beneficiaries, focused group discussion and in-depth interviews. The geo-tagged photographs and short videos were also made.

Secondary Data:

This involves literature review of SJVN website, baseline reports, sample monitoring and evaluation report, implementation agencies, beneficiary data and CSR Annual Reports of SJVN, media reports etc.

3.7.1 Sampling and sample size

For this study the sample of project beneficiaries were chosen using random sampling method, in each of the project sites of SJVN. 30% of the beneficiaries from all the projects were covered in the data collection. While random sampling approach was followed, special attention was given to the gender dimension and both of male and female beneficiaries were chosen for the study.

3.7.2 Data analysis tool

Automated ZOHO analytics and MS- Excel were used as a data analysis tool to analyze the primary data collected during the survey. All the objective inputs are analyzed using this tool while subjective responses are analyzed using semantic analysis methods.

3.7.3 Ethical Considerations

Informed consent is an important principle for all research endeavors and the same was maintained during the study. The respondents and key stakeholders of the study were informed about the purpose of the study. Further an assurance about confidentiality of the interview was given to all the respondents. They were free to choose not to answer any question while conducting survey or interview.

3.7.4 Data Collection tools

Survey Questionnaire:

An intensive questionnaire (as per the requirement of project) to assess the impact of projects upon villagers' lives was developed. A significant number of responses were recorded to collect quality data for each project. ZOHO survey tool was used to facilitate online and offline data collection depending on internet connectivity in the areas. Procedure for conducting survey was as follows:

1. Participants were identified by the method of random sampling as per the inclusion criteria.
2. The participants were made comfortable and briefed about the purpose of the survey and in the process their consent was obtained.
3. The responses were recorded by the investigator manually.
4. Debriefing was done after the completion of the questionnaire.

Stakeholder Consultation:

Stakeholder consultations were also conducted for assessment of all the projects. Participants in this activity were very specific and included local people, public representatives, implementing agency representatives and local administration. During stakeholder consultation, the impact assessment team has also ensured equal proportion of engagement of women and men.

Semi Structured Interviews:

Semi structured interviews were conducted to gain information about benefits of the implemented projects.

Observations during Fieldwork:

A walk through to the project areas/village/ streets were made by the surveyors for the physical verification, functionality of the project.

Public Consultations:

For various flagship projects of SJVN FGDs were carried out with beneficiaries to get an in-depth understanding of benefits received and whether the project initiatives fulfilled their needs.

Case Studies/Success Stories:

The case study method will be used to capture success stories from each of the verticals across all the years. The case study method will help in capturing multi-faceted understanding of benefits incurred by the respondents.

Photography/Videography:

Photography and videography were used as tools for visual data collection, especially for collection of evidence from field while verifying the implementation of CSR projects of SJVN.

3.8 Project Management - Planning and Execution of Impact Assessment (PEIA)

This involves consultation with SJVN project site officials, implementing agencies and impact assessment team to plan the field work within stipulated time. The Impact Assessment team has developed a standard operating procedure along with checklists and forms & formats. The brief details of the EIA SoP's are as follows:

3.8.1 Checklist for Impact Assessment study

Stage 1: Schedule, Survey preparation, and training

- Field visit schedule.
- Preparation of survey questionnaire and preparation of ZOHO link.
- Training and briefing of investigators.
- Defining role and responsibilities.
- Preparation of format for daily report.

Stage 2: Collection of Documents and Material needed before going to field

- Representation letter from SR Asia.
- ToR for investigators.
- ID for all investigators.
- Project details.
- Survey Questionnaire link.
- Feedback Form.
- Other data collection formats.
- Smartphone.
- Diary and pen.

Stage 3- During Field visit

- Meeting with Nodal officer of implementing agencies.
- Meeting with stakeholders.
- Verification of activities.
- Conducting survey of beneficiaries.
- Case Studies and success stories.
- Geo-tagged photographs.
- Short videos of beneficiaries.
- Photographs and video evidences of field visits (Meetings, Streetlights, Survey participants, interviews)
- Preparation and submission of daily progress report.

Stage 4: Data Analysis and Report Writing

- Preparation of graphs and pie charts.
- Preparation of success stories and case studies.
- Drafting and proofreading of the report.
- Review from impact assessment experts.

3.9 Fieldwork Schedule

S. No	Activity	Timeline											
		W1	W2	W3	W4	W5	W6	W7	W8	W9	W10	W11	W12
1	Preparation Stage												
1.1	Project initiation meeting & Literature review												
1.2	Detailed review of all Project documents												
1.3	Inception Report												
2	Execution Stage												
2.1	Preparation of Research Tools: Preparation of ZOHO questionnaire, fieldwork schedule.												
2.2	Hiring, training and briefing of team members and mobilizers to conduct data collection.												
3	Data Collection and Primary Analysis												
3.1	Field visits to all project sites												
3.2	Data Entry and data cleaning												
3.3	Analysis of the data collected												
4	Reporting Stage												
4.1	Draft evaluation report												
4.2	Feedback from SJVN: Receiving feedback from SJVN on draft report.												
4.3	Final Report Submission: Preparation and submission of final report taking into account inputs and feedback from SJVN.												

Table 3 Fieldwork Timeline

CHAPTER 4 - MMU PROJECT DESIGN AND CONCEPT

4.1 About MMU

Mobile Medical Unit (MMU) provides a range of health care services for the populations particularly living in remote, inaccessible, un-served and underserved areas.

4.2 Health Care Services provided through MMU

The MMU is designed to provide Primary Healthcare services, namely:

Free Treatment: The doctor examines patients based on available equipment, clinically diagnoses them and prescribes medicines. When required, the patients are referred to pathological laboratories for detailed investigation/ secondary/ tertiary health care service providers for special treatment and care.

Free Medicines: The MMU stocks medicine for all common ailments among the elderly including Hypertension, Diabetes, Arthritis, etc. These medicines are issued to the patients free of cost by the Pharmacist on the basis of the Doctor's prescription. The Pharmacist also explains the dosage of medicines and their side effects, if any, to the patients.

Basic Diagnostics: The MMU van is equipped with basic diagnostic equipment such as stethoscope, BP apparatus, thermometer, weighing machine etc. for checking the vital signs. In addition to this there is a 'glucometer' for blood sugar testing.

Tests available in the MMU

Biochemistry

Cardiology

E GFR

Electrolytes

Hematology

Lipid profile test

Liver function test

Parasitology

Serology

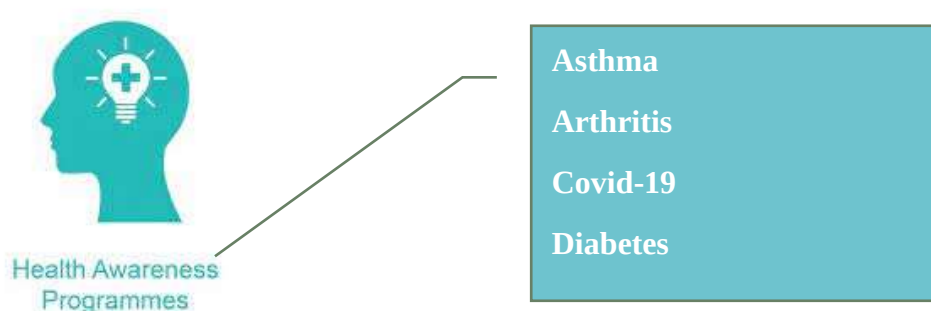

Home Visits by Doctor (in case of Bedridden Patients): The doctor and the paramedic team conduct weekly visits the houses of bedridden elders who otherwise cannot approach or be brought to the vehicle. The doctor and paramedic team examines & clinically diagnose the problems presented by the elder patient or caregivers and prescribes medicines and advice the patient and their caregivers.

Counseling for Patients, Elders, Family Members and Caretakers: The counselor and the doctor provide necessary advice and counseling to patients and caretakers on various ailments and home care. The project team also conducts regular counseling sessions on various aspects for healthy ageing i.e. (a) diet and nutrition; (c) weight reduction; (b) regular exercise; (d) smoking; (e) alcohol; (f) social activities. By adopting a healthier lifestyle, the risk of a whole range of diseases can be reduced.

Community awareness on the rights of the elderly: Every person has the right to freedom and respect and the right to be treated fairly by others. A positive, supportive and caring attitude by family, friends, caretakers and the community will help people to continue as integral, respected and valued members of society.

Creating awareness in the community especially among the younger generation will help to sensitize them on the various aspects of taking care of the aged and in long term will also help them in preparing for their old age.

Health Awareness Camps: The doctors and the staff of the MMU initiates health awareness camps in the project areas in an effort to educate the society about the most prevalent diseases and pandemic in the region such as Asthma, Arthritis, Diabetes, etc.

Other value-added services include Referral services / facilities viz.

Referral Linkage with Local Health Providers: The team promotes initiate linkages with private as well as government health care facilities so as to ensure that the required services would be available on demand. The linkage between the Help Age India beneficiaries and these identified institutions would ensure accessibility and affordability of the services.

Linkage with Govt. Schemes and Programs: This initiative aims to increase awareness among the elderly poor about various social security, food security and habitat security schemes, and thus enabling them to advocate/ demand their rights. We realize that elderly people need support to avail these schemes. The MMU plays a facilitating role in linking them with the local and district administration and also collecting the information from the government offices and disseminating this information to the concerned/eligible beneficiaries thus improving their access to social welfare schemes.

4.3 MMU Infrastructure

The MMU is furnished with the aforementioned amenities:

- Ambulance Van
- Lab Equipment's and Test Kits
- Pharmacy
- Etc.

4.4 Composition of MMU Team

The MMUs are staffed with the personnel listed below:

Composition of MMU Team

1. Social Protection Officer

2. MBBS Doctor

3. Pharmacist

4. Driver cum Community Facilitator

1. Social Protection Officer: Leads the team, coordinates the social and health awareness aspects of the project, and oversees all administrative duties. This group will also be responsible for organizing Health Camps in the designated areas.

2. MBBS Doctor: Examines patients and prescribes medicines, as well as serving as the project's chief health officer.

3. Pharmacist: The Pharmacist is made mandatory to stock medications and distribute them to patients. The pharmacist also explains the dosage and side effects of the medications.

4. Driver cum Community Facilitator: He holds a valid driving license and is trained to assist the MMU team in registering the beneficiaries. He also plays a major role in mobilizing the community.

Flow of Data for a Patient:

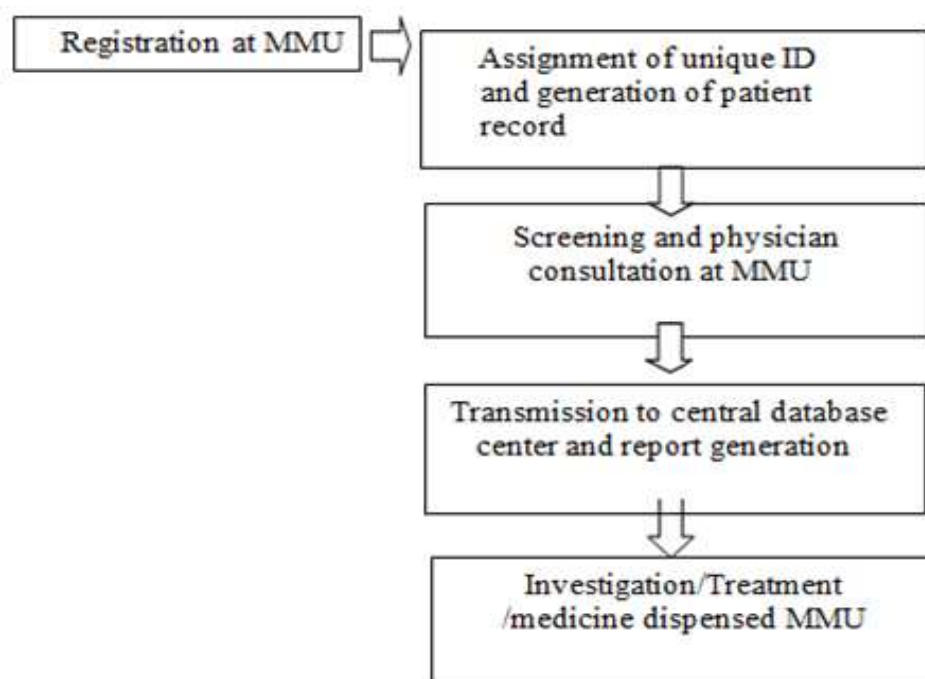

Figure 7 Data flow for a patient treatment in the MMU

4.5 Target Beneficiaries

The MMU project will be aimed at reaching out to provide healthcare to all the sections of the society with special focus to older persons above 60 years of age as well as the communities they live in (in the operational areas) who have limited or no access to healthcare either due to poor services by the existing healthcare facilities or because affordability issues due to lack of financial resources or other physical / mobility reasons.

Though the treatment to people below 60 years is not being denied, it is positively reinforced to the community that the service is focused on the senior population. As a guideline, Help Age India also ensures that at least 50% beneficiaries belong to economically weaker sections (EWS) of the society.

The mobile health program is a proven intervention in delivering health care to vulnerable and unreached sections of the society. It overcomes barriers that the elderly and vulnerable sections encounter in accessing 'for free' services.

Figure 8 Doctor giving advice to his patients

Figure 9 Health awareness camp for elderly

4.6 MMU's Operation Process

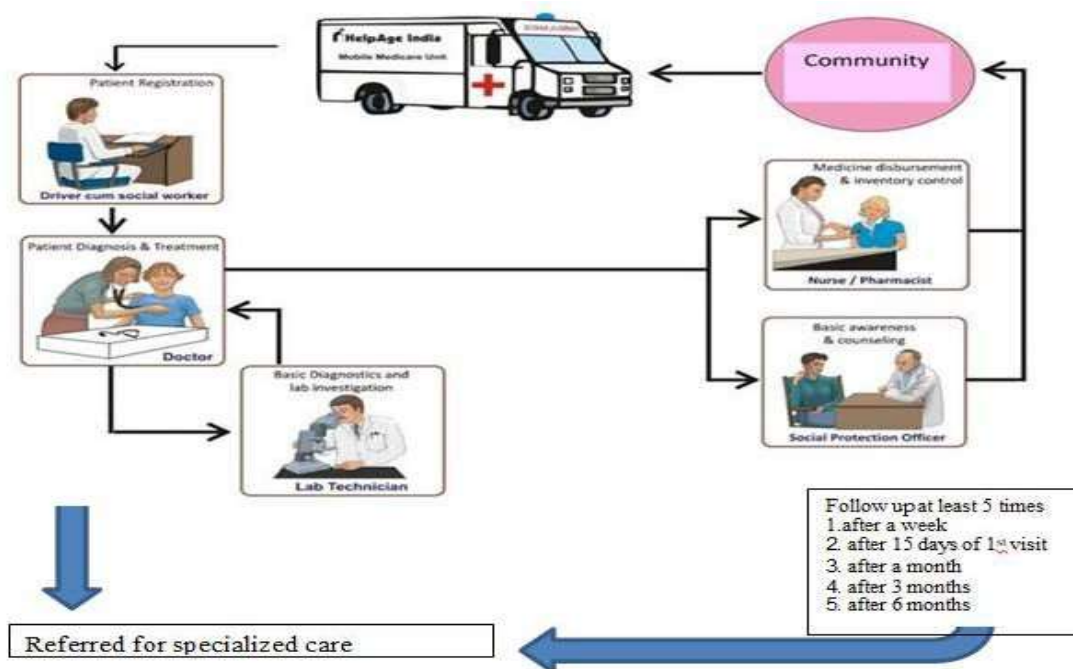

Figure 10 MMUs operation process

Source: Help Age India

MMU Operation Process follows a rigorous module of follow up schedule with their patients. This process starts with the registration of the patient, followed by the basic or advanced diagnosis and treatment. Counseling and disbursement of medicine takes place after detailed examination of the patient.

After follow up of patient every week according to the diagnosis; when requires patients were referred to specialized care.

4.7 Expected Positive Outcomes

- Increased awareness among the community, especially the elderly beneficiaries, care givers and youth, on the rights of the elderly, govt. schemes, and preventive healthcare.
- Facilitating the process of active ageing among needy elders in the community.
- The elderly beneficiaries will be made aware and educated on the basics for active ageing.
- The elderly will have easy access to primary health care and referral needs.

4.8 SJVN CSR Initiative

In line with the National Health Mission, SJVN took the initiative to become a member by starting the Mobile Medical Units (MMU) in their project areas. The project has been called “Satluj Sanjeevani Sewa” by the organization. SJVN started its MMU service in 2012 and at present, SJVN has 14 running MMUs in their project sites, providing medical facilities to the people living in remote areas belonging to economically weaker sections of the society. In this section only four project sites are discussed in this report from the FY 2020- 21 as per the CSR policy of SJVN and the Annexure- 3 of the ToR document stating documentation of Impact Evaluation Study of completed CSR Programs/Projects/Activities having value of Rs.50.00 lakh or more as per Annexure-3.

SJVN started this health care facility with the aim of:

- Improving access to affordable/ free and quality healthcare which took care of the basic health care needs of the residents as health care facilities in rural areas are inadequate.
- With the inception of Mobile Medical Unit travelling cost to distant health care centers will also be reduced.
- This facility will help creating awareness about healthy lifestyle practices.
- It will help particularly women to take good care of themselves as well as of their children with the help of advice and supplement provided by doctors on weekly or monthly basis.

The project sites for which the impact assessment under health care theme is carried out are as follows:

- Running of 01MMU at Rampur Hydro Power Station (RHPS),
- Running of 01MMU at Buxar Thermal Power Project-1(BTPP-1),
- Running of 01MMU at Buxar Thermal Power Project-2(BTPP-2) &
- Running of 01MMU at Khirwire Wind Power Station (KWPS).

The projects are assessed with an emphasis on the local people being at core of our analysis.

4.9 Running of MMU in Project Sites

Under the ‘Satluj Sanjivani Sewa’ initiative, SJVN provides free health consultations to rural residents in the project area using Mobile Medical Units (MMU’s). The initiative was undertaken on behalf of SJVN Foundation by HelpAge India, a well-known NGO, for which a Memorandum of Understanding (MOU) was signed in April 2013. Each MMU is staffed by a certified medical team which includes a doctor, pharmacist, social protection officers, and others. It also has basic diagnostic test equipment. The MMU’s assist in addressing the problem of impoverished people’s inability to afford, access, and obtain basic healthcare facilities.

MMU is designed to provide primary healthcare services to the rural poor who fall under the following categories:

- Free treatment: The registered medical practitioner in the MMU diagnoses each patient for free. Patients are sent to pathological laboratories for detailed investigations or to a secondary or tertiary health care provider for specialized treatment and care if necessary.

- Basic diagnostic: For checking vital indicators, the MMU has basic diagnostic equipment such as a stethoscope, blood pressure monitor, thermometer, and weighing machine. There's also a glucometer for measuring blood sugar. Patients are directed to the nearest hospital if advanced diagnostics are needed.
- Free medicines: The MMU stocks medicine for all common ailments including common cold, fever, hypertension, diabetes arthritis etc. which are issued to patients free of cost by the pharmacist along with the prescription.
- Home visits by doctor (in case of bed ridden patients): The doctor and paramedic crew make weekly visits to the homes of bedridden elderly people who would otherwise be unable to approach or be transported to the vehicle. The doctor and paramedic team assess and clinically diagnose medical problems, administer medications, and provide advice to patients and their caregivers.
- Counseling for patients: The counselor and the doctor provide patients and caregivers with appropriate information and counseling on a variety of diseases and home care. Regular counseling sessions on many elements of health, such as diet and nutrition, weight loss, regular exercise, evils of smoking and alcohol, and other social activities, are also conducted by the project team.

Figure 11 B.P. testing in the MMU van

4.9.1 Common Diseases in all project sites

As per data were made available, the disease type in age group is depicted on Table 4.

Impact Assessment of CSR Projects FY 2020-21

Type of Disease	Age Group
Cough/Cold/Fever	31-45 years
Cough/Cold/Fever	21-30 years
Cough/Cold/Fever	11-20 years
Cough/Cold/Fever	4-10 years
Osteoarthritis	60 above
Gastritis / Peptic ulcer	60 above
Ear ache/ ear disorders	11-20 years

Table 4 Common Diseases in all Project Sites

Prevalent disease almost common in all project sites with some variations and detailed tabulation is as per Table 5.

Category	Diagnosis	Male	Female	Total	%
General	Cough/Cold/Fever	106	171	277	36.07%
General	Physical Injuries/Insect bite and Burns / abrasions / contusions / lacerations etc.	3	1	4	0.52%
General	Jaundice	0	0	0	0.00%

CHAPTER 5- RUNNING OF MOBILE MEDICAL UNIT (MMU) IN PROJECTS AREAS THROUGH HELPAGE, INDIA

CSR Project Details	
Name of the CSR Project	Running of Medical Mobile Unit (MMU)
Project Executioner:	Help Age India
Project Proponent:	SJVN Foundation
Number of States covered:	Himachal Pradesh, Bihar & Maharashtra
Project Sites:	Rampur Hydro Power Station (RHPS), Buxar Thermal Power Project-1 (BTPP1), Buxar Thermal Power Project-2 (BTPP-2) & Khirwire Wind Power Station (KWPS)

Figure 13 MMU at KWPP

5.1 CSR Project 1: RHPS- Running of 01 MMU in project areas through Help Age, India

Villages Covered on this Project Site:

Piptiser, Chaati, Kasholi, Sharshaya, Thachwa, Sirwaseri, Chaklot, Badghe, Randal, Paali, Poshna, Oddadhar, Kushwa, Kindla, Banthana, Kafti, Tunan, Dumga, Bishlaydhar, Gaonbeel, Kathanda, Panagiri, Bahawa, Damehri, Badi, Kharga, Swarage, Chillange, Bakkhan, Koyal, Dharmot, Averi

CSR Project Details	
Starting Year:	2017
Completion Year:	2020
State:	Himachal Pradesh
Project Site:	RAMPUR HYDRO POWER STATION (RHPS)
Total Expenditure:	INR. 72.00 Lac

Figure 14 MMU visit in RHPS village

5.1.1 About the Project

SJVN is running 01 Mobile Medical Unit in the area covering about 32 villages of Rampur Hydro Electric Power Station based in Himachal Pradesh. The field teams have met number of beneficiaries in many villages in project areas.

5.1.2 About Rampur Hydro Electric Power Station (RHPS)

The Rampur Hydro Power Station (RHPS) is a 412MW hydroelectric power station on the Satluj River in India's Himachal Pradesh state. Satluj Jal Vidyut Nigam, a joint venture of the Government of India and the Government of Himachal Pradesh, developed the project. Rampur Hydro Power Station (6X68.67 MW) located on river Satluj in Himachal Pradesh is a tail race development of Nathpa Jhakri Hydro Power Station (NJHPS) and was commissioned during 2014-15. The project is unique, working in tandem with NJHPS.

5.1.3 MMU service in RHPS

Using Mobile Medical Units (MMUs), the flagship CSR project 'Satluj Sanjivani Sewa' organizes free health camps for rural residents in the project area. Help Age India, a well-known non-governmental organization, undertook the initiative on behalf of SJVN Foundation.

Since more people are able to benefit from the initiative, the programme is long-lasting and efficient. In the FY 2020-21, a total of 12,708 people had been treated by the MMU team in the year following a financial implication of Rs. 72 lakhs. Pathological test such as blood tests, Diabetes test and hemoglobin testing etc. facilities are available in the MMU in the project site and consultation for all kind of problems are provided to people. The project affected people are receiving free medicines for their ailments along with free medical consultation.

5.1.4 Coverage of the MMU

- No. of villages the MMU cover: 32
- No. of MMUs in the area: 01

5.1.5 Infrastructure in the MMU

	Name of Equipment	Quantity
Medical equipment (List all the equipment in the MMU)	Mobile Van	01
	Pharmacy	01
	Pathological lab	01
	Medical Test	Many for generic testing
	Equipment	Many for generic testing
Other equipment in the MMU (E.g.: Chairs, tables, banners etc.)- List all the equipment	Backdrop/ Banner:	Yes

Table 6 Infrastructure in the MMU

Impact Assessment of CSR Projects FY 2020-21

5.1.6 Details of Beneficiaries

Total beneficiaries (average beneficiaries in a month in the year 2020-21)

Village name	Males	Females	Total
1. Piptiser	2	2	4
2. Chaati	6	13	19
3. Kasholi	5	32	37
4. Sharshay	10	25	35
5. Thachwa	6	13	19
6. Siswaseri	2	1	3
7. Chaklot	5	15	20
8. Badghe	11	31	42
9. Randal	8	62	70
10. Paali	7	14	21
11. Poshna	12	20	32
12. Oddadhar	5	9	14
13. Kushwa	38	42	80
14. Kindla	0	2	2
15. Banthana	1	2	3
16. Kafti	13	25	38
17. Tunan	13	13	26
18. Dumga	3	4	7
19. Bishlaydhar	6	5	11
20. Gaonbeel	5	5	10
21. Kathanda	10	22	32
22. Panagiri	10	19	29
23. Bahawa	3	8	11
24. Damehri	34	49	83
25. Badi	6	17	23
26. Kharga	27	40	67
27. Swarage	0	3	3
28. Chillange	8	7	15
29. Bakkhan	7	17	24
30. Koyal	10	14	24
31. Dharmot	9	7	16
32. Averi	2	4	6
TOTAL	284	542	826

Table 7 List of beneficiaries in RHPS

Treatment Provided by MMU

The type of diseases for which MMU provide support treatment and facilities are as follows

Cold/cough/fever
COPD/Asthma
Osteoarthritis
Hypertension
Skin disorder
Diabetes mellitus
Gastritis/ Peptic ulcer
Ear ache/ ear disorders
Seasonal
Other

5.1.7 Socio Economic Profile of Beneficiaries

This section explains in details the traits of the sample population. It focuses on the key demographics of the beneficiaries interviewed for which primary information was collected through a questionnaire. The study captured information on various demographic parameters like gender, social affiliation, religious distribution of beneficiary, type of family, size of families, age group, educational qualification, occupation, and annual salary. This analysis is presented for Rampur Hydro Power Station.

Gender of Beneficiaries

The present study covered a total of 30% of the total population in RHPS. The gender analysis suggested that the proportion of female is more than male in the project area.

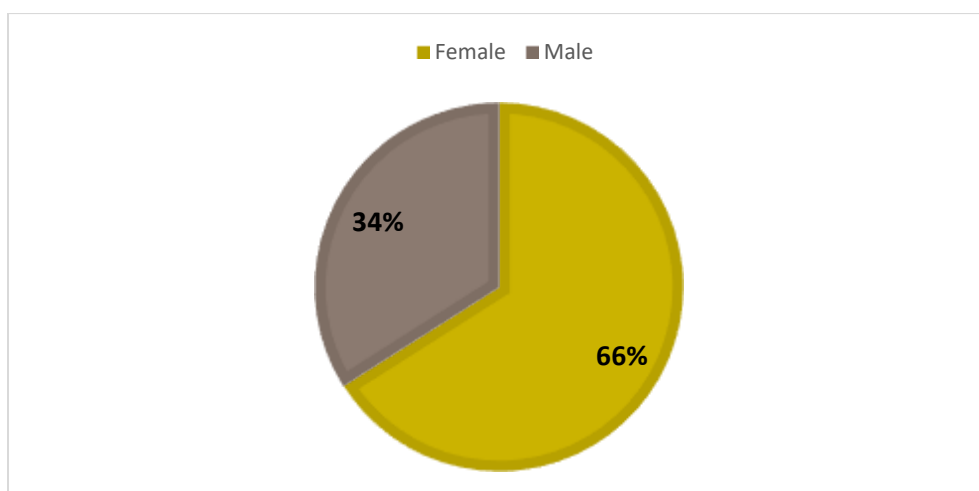

Figure 15 Gender of Beneficiaries

In RHPS, the gender analysis present that in a population mix, 66% of the beneficiaries are female whereas 34% beneficiaries are male as shown in figure 15.

Social Affiliation and religious distribution of beneficiaries

The class or category wise distribution of the beneficiaries is provided in the following table.

Categories	Percentage of Beneficiaries
General	32.70%
SC	16.72%
ST	3.98%
OBC	45.86%
Other	0.74%

Table 8 Social Category of Beneficiaries

It is clear from the preceding table that the majority of beneficiaries fall into the SC, ST, and OBC categories, with OBC constituting the largest group. The general category is the second- largest group of project beneficiaries. A graphical representation of the social category-wise data is provided below in figure 16.

Figure 16 Social Category of Beneficiaries

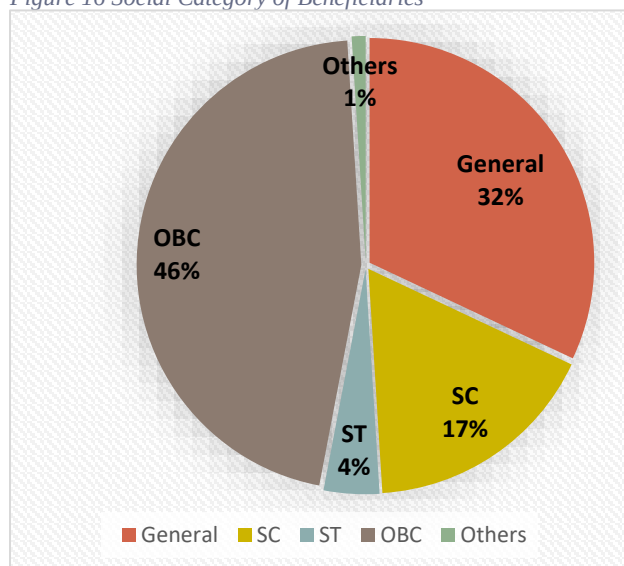

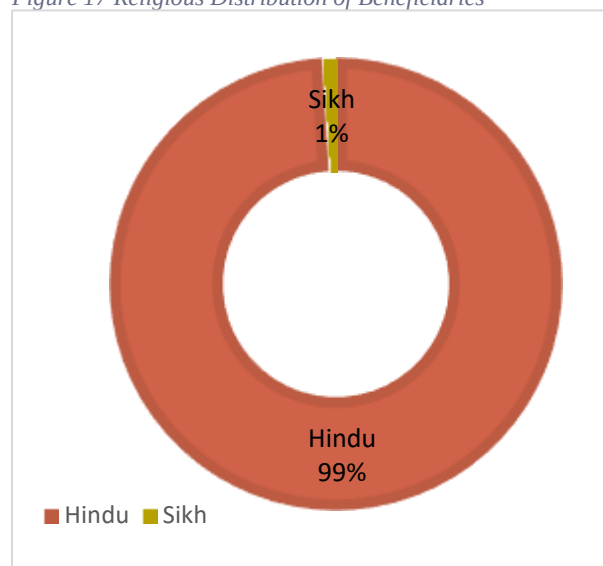

Figure 17 Religious Distribution of Beneficiaries

The figure 17 shows that a large majority of 99% of the beneficiaries belong to Hindu community. Only 1% of the beneficiaries belong to the Sikh community and no other religions are recorded from the interviewed beneficiaries.

Type and size of family members of beneficiaries

The RHPS, 60% of the families are joint families and 40% are nuclear families. Most of the joint families reside here as shown in figure 18.

From figure 19 we can infer that about 35% of the beneficiaries have a family size of 4 members indicating nuclear families, followed by a family size of 6 members (21%) and 7 members (15%).

Impact Assessment of CSR Projects FY 2020-21

Figure 18 Type of Family Beneficiaries

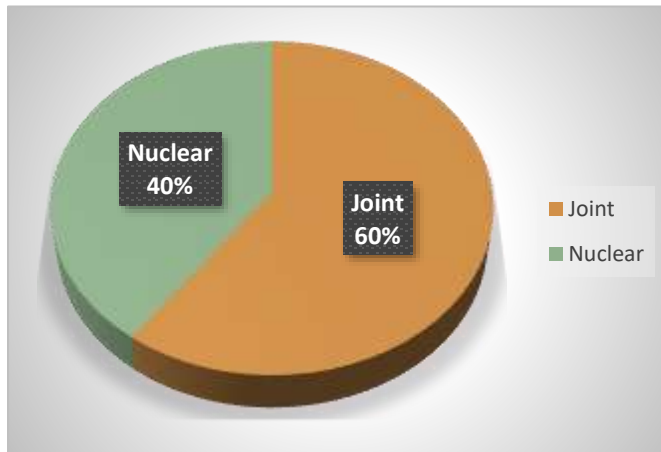

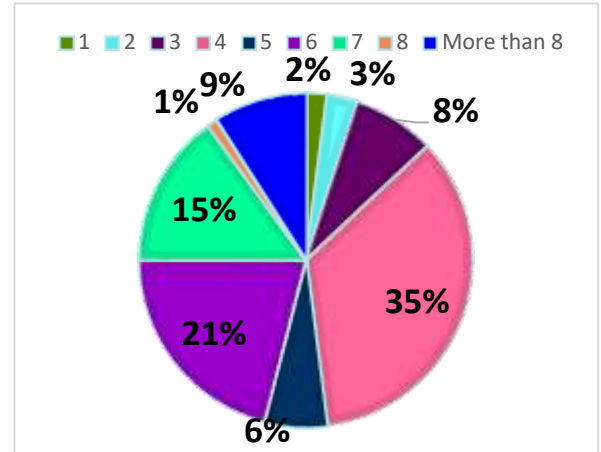

Figure 19 Size of Family of Beneficiaries

Age group and educational qualification of beneficiaries

Figure 20 Age Group of Beneficiaries

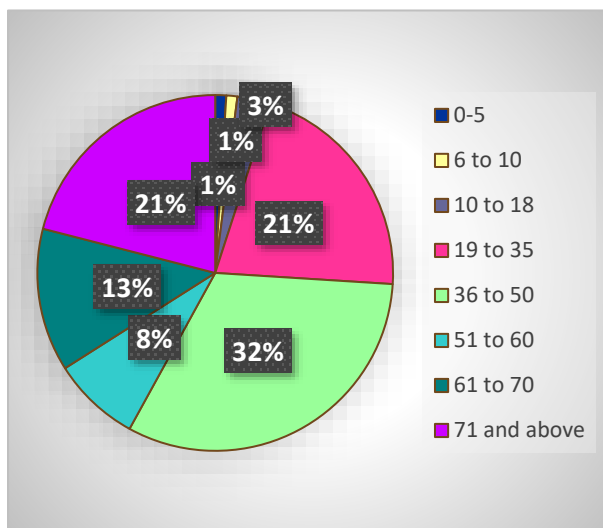

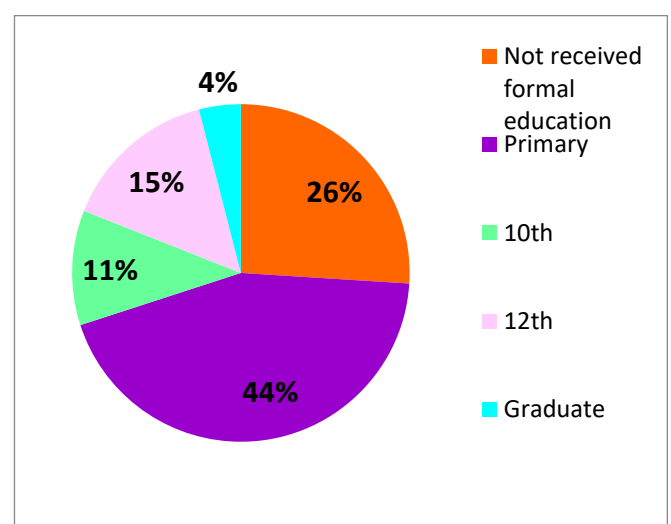

Figure 21 Educational Qualification of Beneficiaries

About half of the beneficiaries in the RHPS belong to an age group of 19 to 35 years (21%) and 36-50 years (32%) followed by 71 years and above with 21%. It can be observed from figure 20 that not only older people are taking services from the MMU but the younger generation as well.

Majority (44%) of the population has completed education till primary level followed by being illiterate and completing matriculation (11%). Educated people avail less facilities from MMU as shown in figure 21.

Occupation and Annual Income of Beneficiaries

Figure 22 Occupation of Beneficiaries

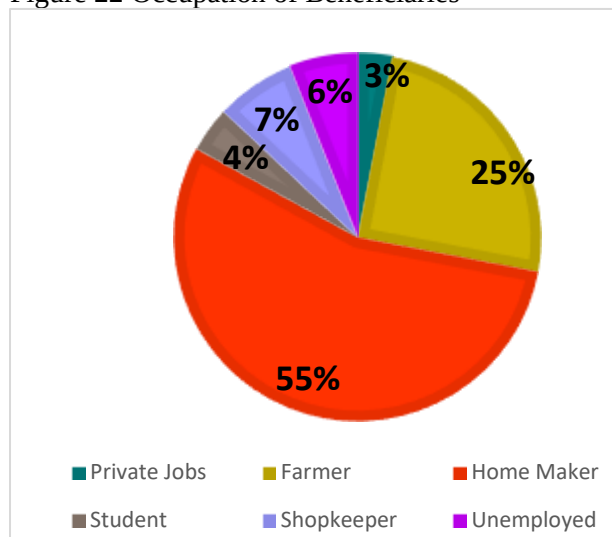

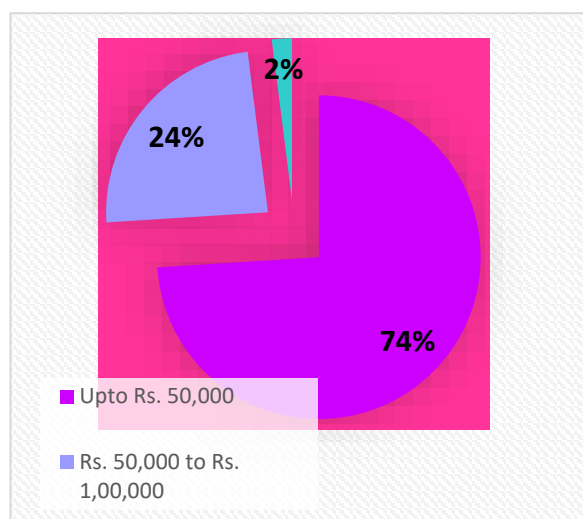

Figure 23 Annual Income of Beneficiaries

In RHPS, 55% of the beneficiaries are home maker indicating women, followed by 25% of them being farmers and 7% are engaged in shop keeping. 6% of the population is unemployed followed by being a student (4%) and having private jobs (3%) as shown in figure 22.

74% of the beneficiaries earn up to Rs. 50,000, followed by 24% of the beneficiaries of them earn Rs. 50,000 to Rs. 1,00,000 and only 2% of the beneficiaries earn more than Rs.1,00,000 as shown in figure 23.

5.1.8 Health Facilities Covered in Villages at RHPS

The present section discusses the prevalent diseases and healthcare infrastructure facilities present in the project sites of the Mobile Medical Unit. These findings through the primary research in this section are going to be used in the further sections to draw comparisons in the facilities and the benefits received by the localities from the Mobile Medical Unit.

Not only does better health suggest higher human development, but it also serves as a key indicator of economic progress. A gap in service delivery caused by the lack of primary healthcare for the poor in rural areas usually presents a business opportunity for quacks and rural medical professionals (RMPs). In the villages from the project locations, the current study noted the availability of health infrastructure.

To better understand health seeking behavior, the study mapped access to health infrastructure in the villages encompassed by SJVN Project location in Rampur Hydro Power Station.

Impact Assessment of CSR Projects FY 2020-21

Healthcare Infrastructure	Primary Health Center	Community Health Center	District Health Hospital	ASHA Worker	Ayurvedic Center	Midwife	Quacks
Availability	✓	✓	✓	✓	✓	✓	
Health Care Infrastructure	Registered Medical Practitioner	Private Clinic	Private Hospital	Diagnostic Labs	Homeopathy Center	Dispensaries/Pharmacies	Emergency Health Service
Availability	✓			✓		✓	✓

Table 9 Healthcare Infrastructure Availability

It can be noted that primary health center, community health center, ASHA worker, Midwife, registered medical practitioner, labs and emergency services are present in the RHPS site area. However, it was observed that the primary medical healthcare facilities are lacking in their infrastructure in the site area. Also, the nearest medical facilities are difficult to access by the people living in the RHPS project site.

5.1.9 Incidences of Health Issues as per Baseline Studies

Prior to the implementation of MMU in the area, the incidences of health issues were mapped in order to gain a better understanding of the health problems faced by the local population.

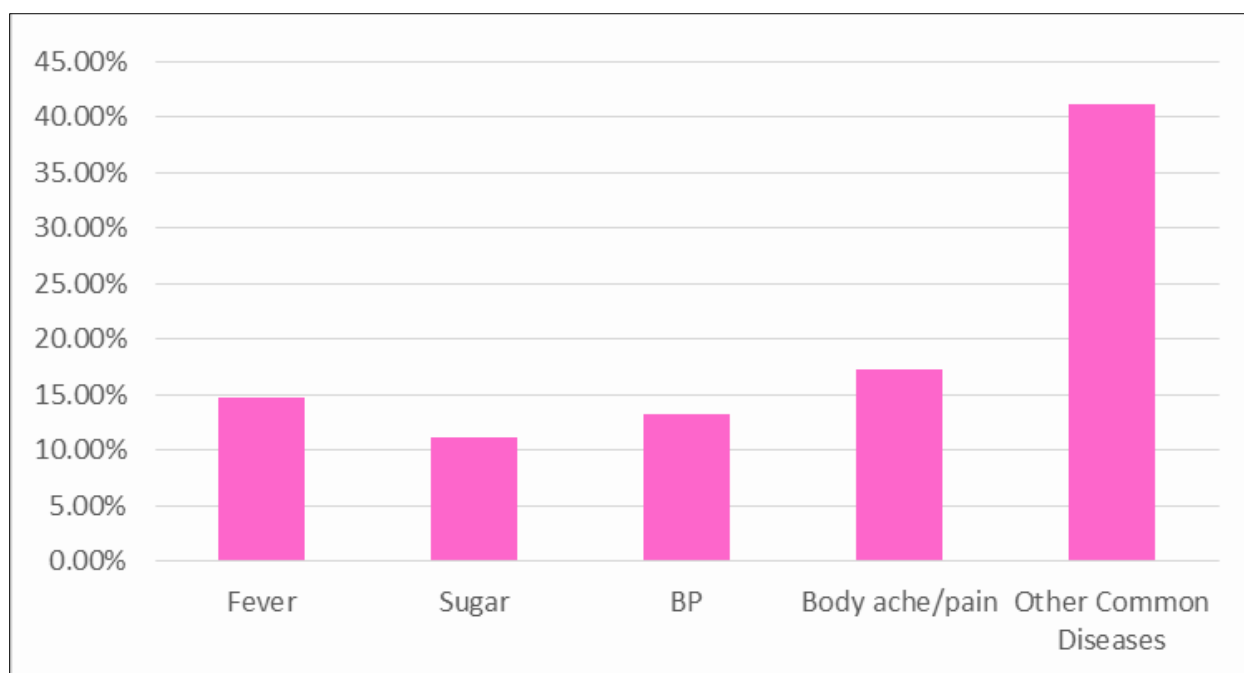

Figure 24 Incidences of Health Issues Prior to MMU

The study mapped the prevalent diseases present in the project area prior to the arrival of the MMU service in their area. It was noted that common diseases such as headache, stomachache, vomiting

are recorded in close to 42% of the sample. It was followed by body ache/pain in 18% sample, Fever (15%), B.P (12%) and Sugar (11%).

5.1.10 Quantifying the Impact of MMU through Primary Research

Benefits of MMU as Perceived by Respondents

The beneficiaries of the MMU program received various facilities such as free consultation, basic diagnostic and treatment, and free medicine. The following table shows the percentage data of benefits received by the beneficiaries.

Table 10 Benefits of MMU as perceived by Beneficiaries

Types of Benefits	Percentage of Responses
Free Consultation from a doctor	42.24%
Free Medicine	94.42%
Free Diagnostic	18.93%
Free Dietary Plan and Supplements	8.44%
Improvement in Health	48.70%
Easy access to a medical facility	19.99%
Timely treatment	21.21%
Saved time and money	54.20%
Ability to earn more as a result of good health	15.96%
Happiness in the family	26.23%

The above table shows that most of the people stressed on the free medicine received from MMUs (94.42%). 48.70% people have reported improvement in health, free diagnostic (18.93%), timely treatment (21.21%). Apart from receiving direct benefits such as consultation, diagnosis and medicine, the MMU service has resulted in indirect benefits like saving time and money, improvement in the ability to earn more money and increased happiness in the family because of good health.

A graphical representation of the above data is given below.

Impact Assessment of CSR Projects FY 2020-21

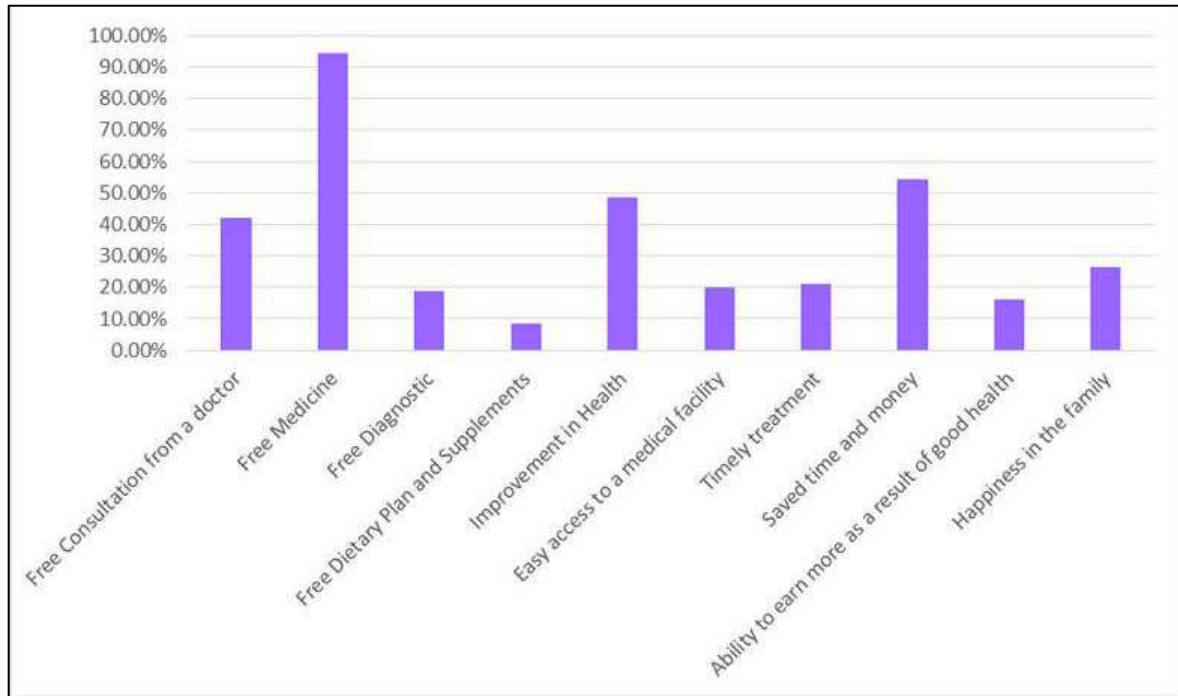

Figure 25 Representation of the Benefits Received through MMU

5.1.11 Comparative Analysis of Health Issues Before and After Treatment through MMU

A comparative analysis has been drawn to quantify the impact of the MMU. The health incidences in the project area had been compared before arrival and after arrival of the Mobile Medical Unit service in the area.

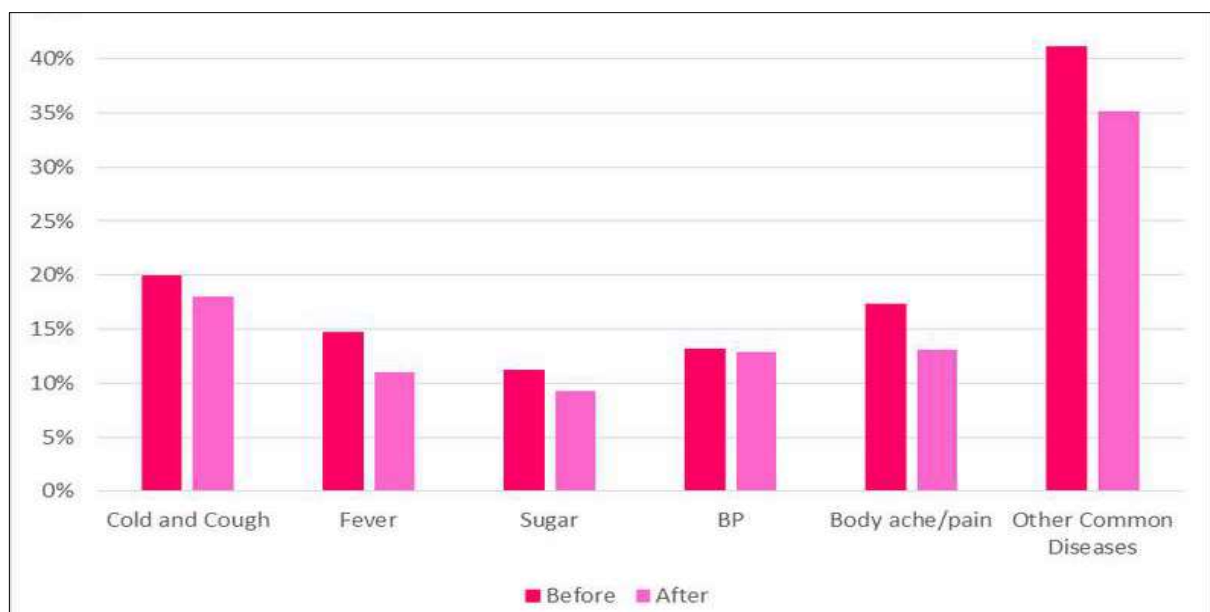

Figure 26 Comparative Health Analysis before and after MMU

It can be noted that after facilitating the services from the mobile medical unit the incidences in the health issues have gone down in the project sites of RHPS. Temporary disease like cold and cough decreased from 20% to 18%, fever declined from 15% to 11% and other common diseases like headache, stomachache has decreased from 41% to 35%. However, there is only a slight decrease in the long-term diseases after the facilities through the MMU. Sugar incidences have gone down from 11% to 9% and B.P. incidences remain same after the intervention through the mobile medical unit in the area.

5.1.12 Usefulness of the MMU Program

The beneficiaries of the MMU were asked across various sites about various outcomes and results of the initiative that they experienced. They were instructed to give a rating on a scale of very poor-poor-good-satisfactory-excellent. The following table shows the percentage-wise distribution of these ratings on different parameters of health improvement, disease control, child mortality rate, decrease in financial burden, and overall positive impact on family health.

Table 11 Responses Regarding the MMU Program

Project Site: RHPS	No response (%)	Very poor (%)	Poor (%)	Good (%)	Satisfactory (%)	Excellent (%)
Health improvement	4.78	0.00	0.00	53.17	18.25	23.80
Disease control	9.54	0.00	1.58	58.73	23.01	7.14
Decrease in child mortality rate	41.26	4.76	19.84	25.39	7.25	1.5
Decrease in financial burden	23.83	0.79	3.17	30.95	21.42	19.84
Overall positive impact on family health	3.98	0.79	0.79	42.85	19.08	32.51

- The health improvement was rated as good by 53.17 percent of the beneficiaries, while 18.25 percent of the beneficiaries were satisfied with the MMU services, and 23.80 percent of the beneficiaries felt that the services are excellent. In spite of the fact that no one in the sample group has rated the quality of the provided services as being poor or very poor, 4.78 percent of the beneficiaries have not provided a response for this particular criterion.
- The vast majority of beneficiaries, or 58.73 percent, have acknowledged that the MMU services have been effective in disease control. Meanwhile, 23.10 percent of beneficiaries have asserted that the services are satisfactory for disease control, and 7.14 percent of beneficiaries believe that the services are extremely effective in disease control. Only 1.54 percent of those who benefited from MMU services said that the quality of those services for disease prevention and control was subpar. On the other hand, nobody complained that the services were extremely subpar, and 9.54 percent of beneficiaries haven't given any response at all regarding this criterion.
- 25.39 percent of beneficiaries believe that the MMU services are good to help in decreasing the child mortality rate. 7.25 percent of beneficiaries believe that the MMU services are

satisfactory, and 1.58 percent believe that the MMU services are excellent. 19.84% of the people who benefitted from the MMU services were of the opinion that the organization's efforts to lower the rate of child mortality were subpar, and 4.76% of those people held the view that the MMU was very subpar in its efforts. The vast majority of respondents, or 41.26 percent, have not assigned any rating to the criterion.

- 39.95 percent of the beneficiaries believe that the MMU services are beneficial for easing the financial burden that they are under, while 21.42 percent believe that the services are satisfactory for this purpose and 19.84 percent believe that the services are excellent. However, 3.17 percent of those who benefitted from the programme said it was inadequate, and 0.79 percent of them said it was very inadequate in terms of reducing the amount of financial strain they were under. 23.83 of the beneficiaries have not given any rating at all with regard to this criterion.
- The majority of respondents, 42.85 percent, believe that the MMU services are good in providing an overall positive impact on the family, with satisfactory coming in second (19.08 percent), and excellent coming in third (32.51 percent). 0.79 percent of the people who received the assistance rated it as having poor quality, and 0.79 percent of those people rated it as having very poor quality. 3.98 percent of the beneficiaries have not provided their feedback regarding the same.

Figure 27 Awareness campaign regarding diabetes through the MMU

5.1.13 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 12 Suggestions Regarding the Program

Key observations	Impacts of the projects	Suggestions for Improvement
About 20% of the villages under the MMU project are visited twice a month, rest of the majority of villages were only visited once a month	The beneficiaries were able to avail benefits from the MMU once or twice a month	At the very least twice a month, the MMU should travel to each of the towns and communities.
The Mobile Medical Unit visits the remote areas where there were no primary healthcare services nearby to the residents.	People who were not able to access the primary healthcare services earlier can now avail medical benefits from the MMU	In the future, the facility of primary healthcare should be extended to non-project villages so that there is a health facility that is accessible for all.
All the tests, medicines and the doctor's consultation were available free of cost in the MMU	People belonging to the economically weaker sections of the society are able to have primary healthcare services available to them without any payment.	-
The MMU refers the patient who needs higher testing or treatment to nearby available hospitals. The patients are transferred to and from their home to hospitals through ambulances and their treatments were free in the hospitals by the support of ASHA workers	The MMU has tie up with the NGO which provide tertiary medical services to the patients of MMU. The beneficiaries do not have to bear the cost of the treatment.	
There has been an affinity between MMU's doctors and patients, due to which there has been an atmosphere of great happiness in both of them.	The patients are very happy with the behavior of the doctors and the paramedics of the van. They feel joy in taking services from the MMU which in turns presents goodwill for SJVN in their minds.	-

5.1.14 Feedback from Beneficiaries

Positive Feedback	Suggestive Feedback
MMU service is available to all irrespective of gender, economic status and social class.	The possibility of running MMU in non-project areas can be explored.

5.1.15 Assessing the Impact of the Initiative (OECD)

Table 13 Impact of the Initiative

Parameter	Scale	Description
Relevance	High	People living in the villages and the surrounding areas lacked access to primary healthcare facilities, and as a result, they were unable to meet a requirement as fundamental as this.
Effectiveness	High	The MMU is able to provide primary healthcare services to the people living in the remote areas in villages of project affected areas. People from all age of groups are availing facilities provided by the MMU. People do not hesitate to take services from the MMU due to the good and friendly nature of the doctors and paramedics towards them. The people were able to have timely diagnosis and medicines for their health issues.
Impact	High	Approx. 12,000 thousand people were able to avail healthcare services through the MMU in the project affected areas. The beneficiaries were able to avail healthcare facilities without a financial burden and within their reach. People start seeking medical attention for common ailments which were earlier ignored by them.
Coherence	High	This initiative is a part of the “National Health Mission” by the Government of India. The initiative by SJVN also aligns with the national CSR theme of school education and healthcare and with the Sustainable Development Goal-3 (SDG 3) i.e., health and well- being.
Efficiency	High	The program is efficient in its approach to reach beneficiaries and provide them healthcare facilities. Approx. 32 people were able to avail the services of the MMU daily. The repeated patients in the MMU were up to 70%.
Sustainability	High	Once a patient connects with a MMU service, they get a MMU service card through which they can avail services from the MMU for a lifetime Patients has been getting services from the MMU as long as 6-7 years. This program is sustainable in its approach as it adapts with other programs also to deliver the best results and can be sustained for a long period of time.

5.1.16 Average Rating of the MMU Service by Beneficiaries

Review of programs and services is important since it helps understand the needs of the beneficiaries better and improvise the initiatives accordingly. In each of the project sites the beneficiaries were asked to give a rating of MMU services on a scale of 5. The rating of RHPS is provided in the following diagram.

Figure 28 Rating of the Program

In RHPS an average rating of 4.84 on a scale of 5 is provided to the MMU facilities by the beneficiaries indicating the overall success of the program in the area.

5.1.17 Overall Conclusion and Way Forward

Since the beginning of the mobile health services, the beneficiaries are able to access free medical care, which has led to a general decline in the number of people reporting problems with their health. The medical consultation, medications, and routine check-ups and therapy that the patients have received have, on the whole, met with the patients' approval. According to what has been stated, the residents of this area desire a higher frequency of service provided by MMU.

5.2 CSR Project 2: BTPP-(MMU-1) Running of 01 MMU in project areas through Help Age, India

Villages Covered in this Project Site:

Banarpur, Sikroul, Rajapur, Akhouripur, Mohanpurva, Bechanpurva, Kathatur, Kochadi

CSR Project Details	
Starting Year:	2017
Completion Year:	2020
State:	Buxar, Bihar
Project Site:	BUXAR THERMAL POWER PROJECT (BTPP)
Total Expenditure:	INR. 72.00 Lac

Figure 29 MMU service in BTPP-1

5.2.1 About the Project

SJVN is running 01 Mobile Medical Unit in the area covering about eight villages of Buxar Thermal Power Project based in Bihar. The field teams have met number of beneficiaries in many villages in project areas.

5.2.2 About Buxar Thermal Power Project

Buxar Thermal Power Project is a thermal project under SJVN Thermal Pvt. Ltd. (STPL) which is a wholly owned subsidiary of SJVN. The proposed location of the power Project is Chausa village, Buxar district, Bihar. A total of 1,320 MW (Units 1&2: 660 MW) is planned to be generated by the project. In November 2020, two Indian state-owned enterprises, Power Finance Corporation and Rural Electrification Corporation, Ltd., announced that they were providing Rs. 85.2 billion in funding for the Buxar Thermal Power Project, equivalent to approximately US\$1.14 billion. Financial closure was reached on November 26, 2020. Power Finance Corporation and Rural Electrification Corporation, Ltd. will each cover half of the Rs. 85.2 billion in loans. The project is set to be commissioned in 2023-2024.

5.2.3 MMU Service in BTPP (MMU-1)

A flagship CSR Project under the aegis 'Satluj Sanjivani Sewa' provides free health consultations to rural residents in the project area using Mobile Medical Units (MMU's). The initiative was undertaken on behalf of SJVN Foundation by HelpAge India, a well-known NGO. The program is long running and presents efficiency in nature as more people are able to benefit from the initiative.

In the FY 2020-21, a total of 20,321 people had been treated by the MMU team in the year following a financial implication of Rs. 72 lakhs. Pathological test such as blood tests, Diabetes test and hemoglobin testing etc. facilities are available in the MMU in the project site and consultation for all kind of problems are provided to people. The project affected people are receiving free medicines for their ailments along with free medical consultation.

5.2.4 Coverage of the MMU

- No. of villages the MMU cover: 08
- No. of MMUs in the Area: 01

Figure 30 Stakeholder consultation of beneficiaries by SR Asia team

5.2.5 Infrastructure in the MMU

Table 14 Infrastructure Details in the MMU

	Name of equipment	Quantity
Medical equipment (List all the equipment in the MMU)	Mobile Van	01
	Pharmacy	01
	Pathological lab	01
	Medical Test	Many for generic testing
	Equipment	Many for generic testing
Other equipment in the MMU (E.g.: Chairs, tables, banners etc.)- List all the equipment	Backdrop/ Banner:	Yes

5.2.6 Details of Beneficiaries

Total beneficiaries (average beneficiaries in a month in the year 2020-21)

Village name	Males	Female	Total
• Banarpur	190	155	345
• Sikroul	67	63	130
• Rajapur	41	58	99
• Aukhouripur	54	37	91
• Mohanpurva	40	11	51
• Bechanpurva	44	40	84
• Kathatur	18	30	48
• Kochadi	78	67	145
TOTAL	532	461	1023

Treatment provided by MMU

The type of diseases for which MMU provide support treatment and facilities are as follows

- Cold/cough/fever
- COPD/Asthma
- Osteoarthritis
- Hypertension
- Seasonal Flu

- Skin disorder
- Gastritis/ Peptic ulcer
- Diabetes mellitus
- Ear ache/ ear disorders
- Other

5.2.7 Socio Economic Profile of Beneficiaries

This section explains in details the traits of the sample population. It focuses on the key demographics of the beneficiaries interviewed for which primary information was collected through a questionnaire. The study captured information on various demographic parameters like gender, social affiliation, and religious distribution of beneficiary, type of family, size of families, age group, educational qualification, occupation, and annual salary. This analysis is presented for Buxar Thermal Power Project BTPP MMU-1.

Gender and social affiliation of Beneficiaries

A graphical representation of the gender details and social category-wise data of beneficiaries is provided below.

Figure 31 Gender of Beneficiaries

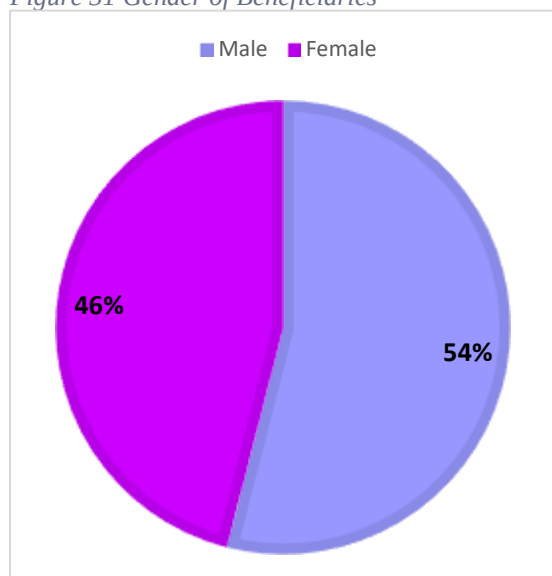

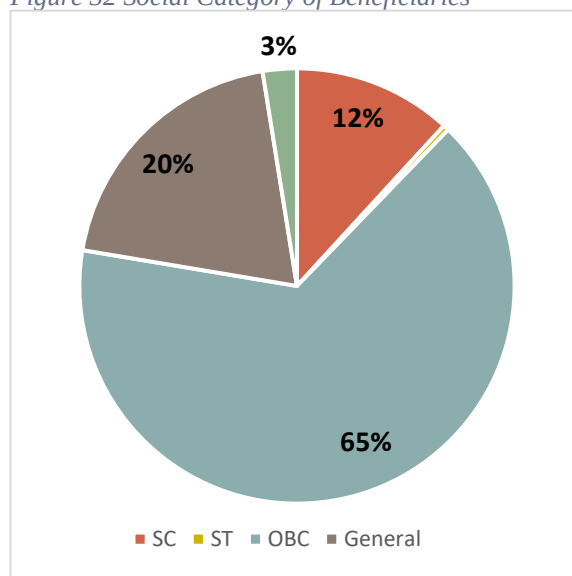

Figure 32 Social Category of Beneficiaries

In BTPP-(MMU-1), the gender analysis present that in a population mix, 54% of the beneficiaries are male whereas 46% beneficiaries are female as shown in figure 31 while the figure 32 above presents that OBC (65%) forms the majority of the beneficiaries, followed by general (20%), SC (12%) and others (3%).

Religious distribution and age group of beneficiaries

Figure 33 Religious Distribution of Beneficiaries

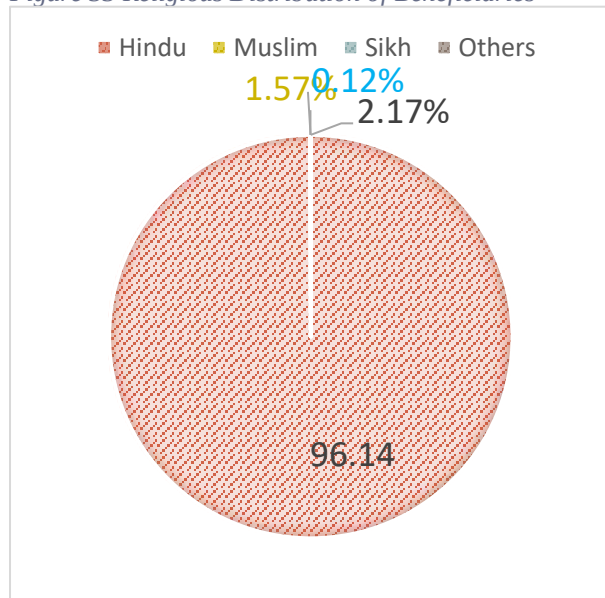

Figure 34 Age Group of Beneficiaries

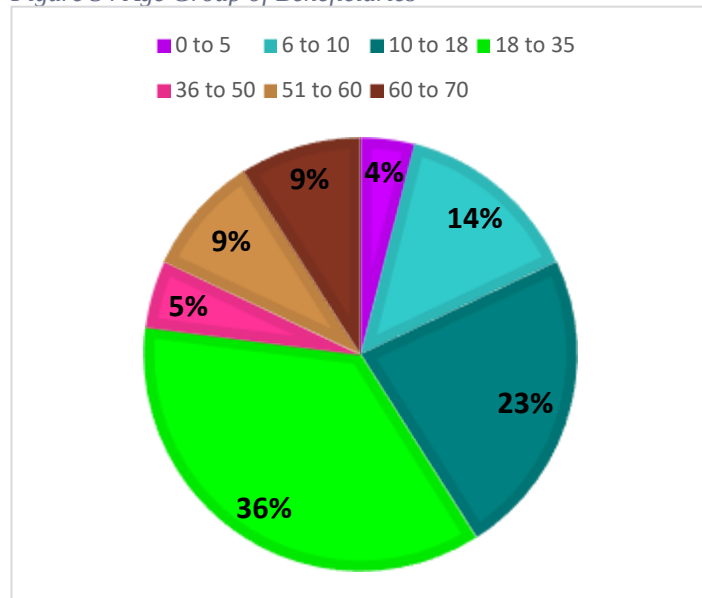

Figure 33 shows that a large majority of 96.14% of the beneficiaries belongs to Hindu community. Only a small percentage (4.5%) of beneficiaries belongs to Muslim, Sikh and other religious communities. Whereas figure 34 demonstrates that majority (36%) of the beneficiaries fall in the age group of 18 to 35 years of age followed by an age group of 10 to 18 years (23%). A total of 9% beneficiaries fall in the age group of 51 to 60 years of age and 9% fall in the age group of 60 to 70 years of age.

Type and size of family of beneficiaries

A total of 62% of the families live in joint families in the project areas whereas only 38% live in nuclear family as shown in figure 35 while from figure 36 it can be inferred that majority of population (32%) have more than 8 family members in their families followed by 5, 6 & 8 family members. Most of the people lived in joint households with 2 male members, 2 females and their children.

Impact Assessment of CSR Projects FY 2020-21

Figure 35 Type of Family of Beneficiaries

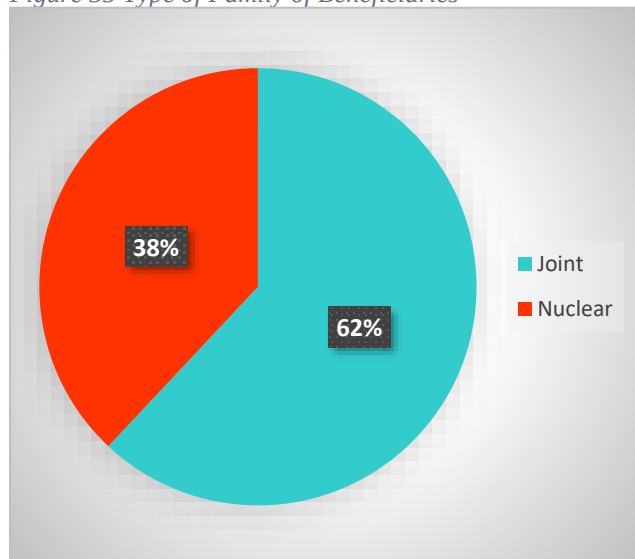

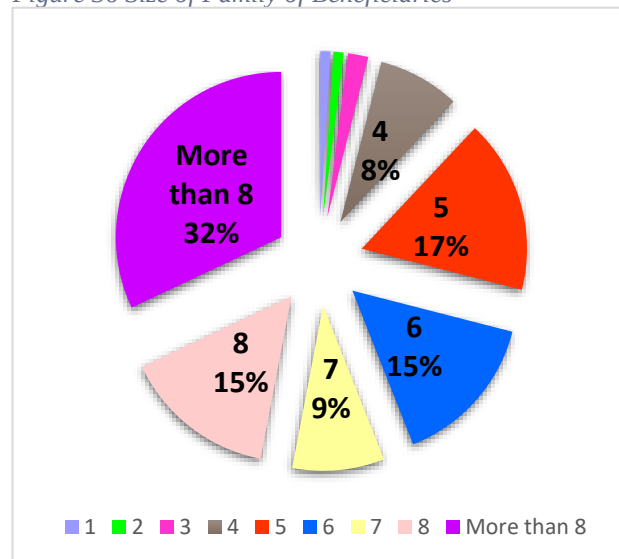

Figure 36 Size of Family of Beneficiaries

Educational Qualification of Beneficiaries

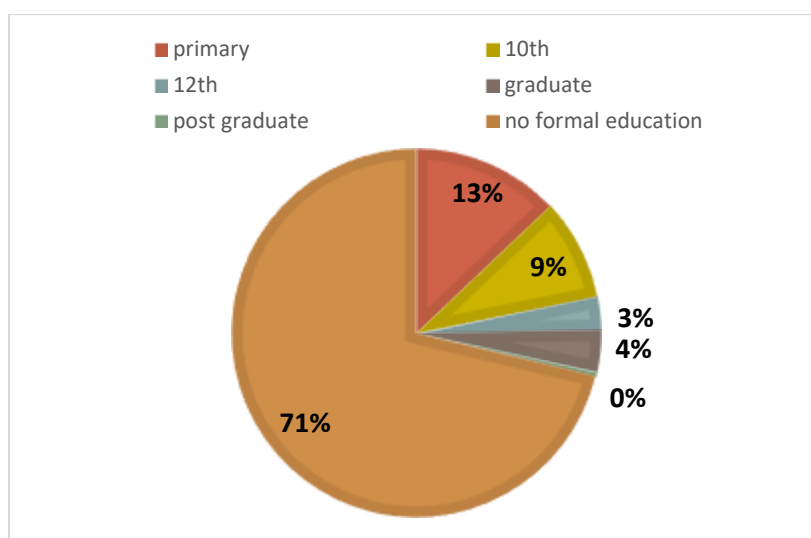

Figure 37 Educational Qualification of Beneficiaries

Majority of beneficiaries (71%) haven't received formal education in the project affected areas. The reasons include belonging to BPL families and non-availability of government-run school in the vicinity. About 13% of people have completed only primary education and 9% have studied till matriculation. Only 3% have completed 12th and 4% are graduate.

Occupation and annual income of beneficiaries

The occupations of the beneficiaries in BTTP (MMU-1) range from farmer to home maker and unemployed. However, it can be deduced from figure 38 more than half (57%) of the beneficiaries are engaged in farming as their means of earning livelihood, followed by being a homemaker (20%).

Impact Assessment of CSR Projects FY 2020-21

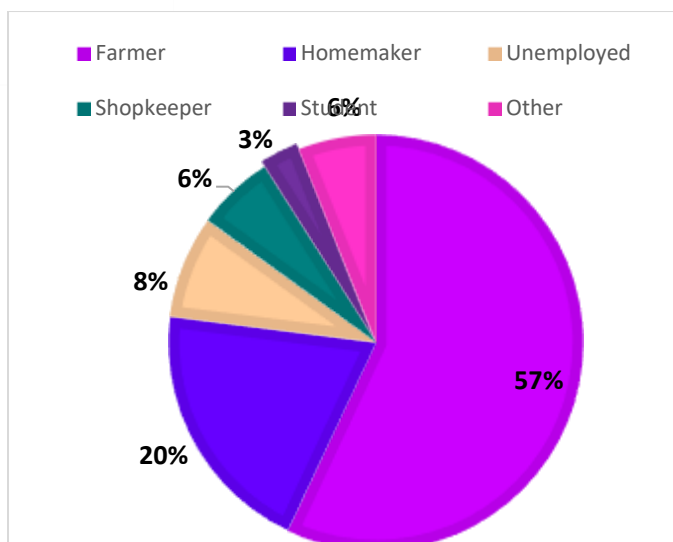

Figure 38 Occupation of beneficiaries

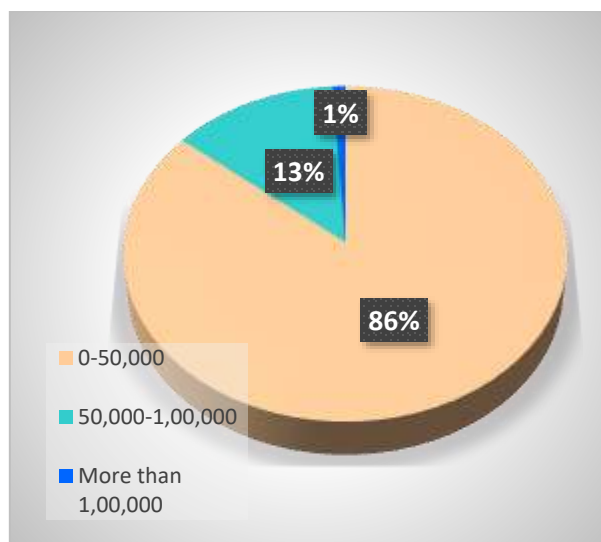

Figure 39 Annual income of beneficiaries

It is interpreted from figure 39 that about 86% of the beneficiaries earn an annual income of up to Rs. 50,000. About 13% earn Rs. 50,000 to Rs. 1,00,000 and less than 1% people earn more than Rs. 1 lakh per year. People from lower income are mostly availing this facility given by MMU. Thus, the services are reaching to those people who are really in need of one.

5.2.8 Health Facilities Covered in Villages at BTPP- MMU-1

Health facilities in villages covered at BTPP- MMU-1

The present section discusses the prevalent diseases and healthcare infrastructure facilities present in the project sites of the Mobile Medical Unit. These findings through the primary research in this section are going to be used in the further sections to draw comparisons in the facilities and the benefits received by the localities from the Mobile Medical Unit.

Health Infrastructure

Not only does better health suggest higher human development, but it also serves as a key indicator of economic progress. A gap in service delivery caused by the lack of primary healthcare for the poor in rural areas usually presents a business opportunity for quacks and rural medical professionals (RMPs). In the villages from the project locations, the current study noted the availability of health infrastructure.

To better understand health seeking behavior, the study mapped access to health infrastructure in the villages encompassed by SJVN Project location in Buxar Thermal Power Project site.

The table mapped the healthcare infrastructure present in the project area of BTPP-MMU-1. It can be observed that there is a lack of primary health center in the project site. In the area a community center, ASHA worker, dispensaries and an emergency health service are present. No secondary or tertiary healthcare is present in the area making it difficult for people to avail basic healthcare infrastructure facilities.

Healthcare Infrastructure	Primary Health Center	Community Health Center	District Health Hospital	ASHA Worker	Ayurvedic Center	Midwife	Quacks
Availability		✓		✓		✓	
Health Care Infrastructure	Registered Medical Practitioner	Private Clinic	Private Hospital	Diagnostic Labs	Homeopathy Center	Dispensaries/Pharmacies	Emergency Health Service
Availability						✓	✓

Table 15 Health Infrastructure in BTPP (MMU-1)

5.2.9 Incidences of Health Issues as per Baseline Studies

To understand the health issues faced by people before the commencement of MMU in the area, the study mapped the incidences of health issues prior to MMU.

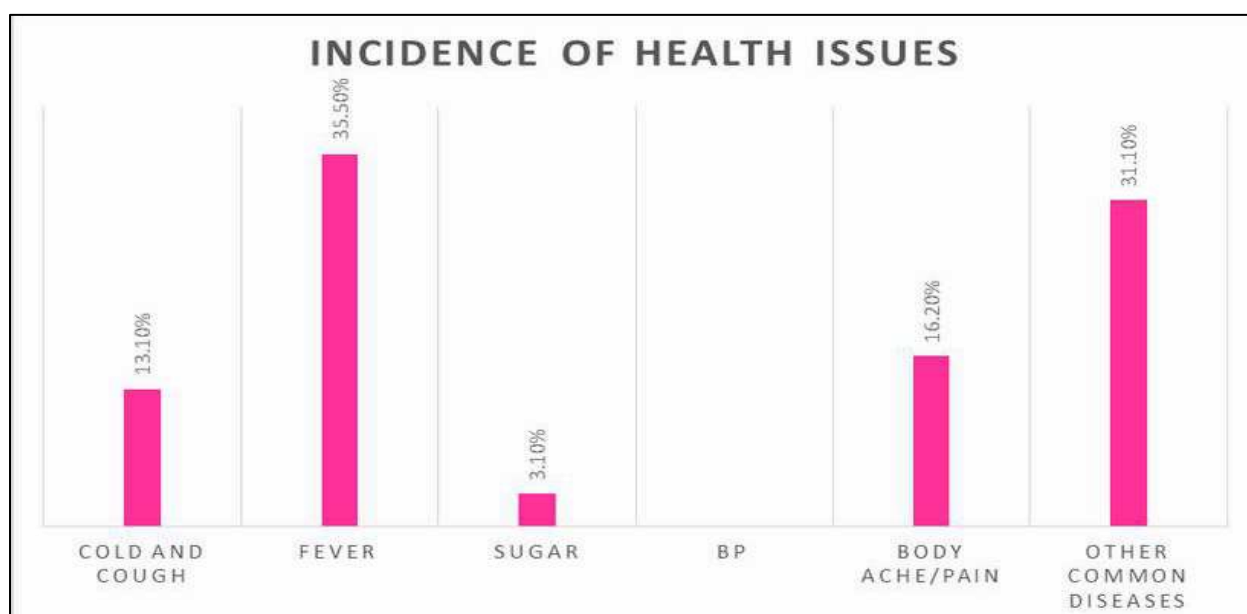

Figure 40 Incidence of Health Issues

From the results, it can be noted that Fever (35.50%) and Other common disease such as headache, stomachache (31.10%) are the major health issues faced by the people residing in BTPP-(MMU-1) area followed by Cold and cough (13.10%) and Sugar (3.10%). Among the beneficiaries interviewed, no responses of B.P. have been recorded in the project site of BTPP (MMU-1).

5.2.10 Quantifying the Impact of MMU through Primary Research

Benefits of MMU As Perceived by Respondents

The beneficiaries of the MMU program received various facilities such as free consultation, basic diagnostic and treatment, and free medicine. The following table shows the percentage data of benefits received by the beneficiaries.

Impact Assessment of CSR Projects FY 2020-21

Table 16 Benefits of MMU as perceived by Beneficiaries

Type of Benefits	Percentage of Responses
Free Consultation from a doctor	38.84%
Free Medicine	79.34%
Free Diagnostic	17.36%
Free Dietary Plan and Supplements	6.54%
Improvement in Health	71.90%
Easy access to a medical facility	8.26%
Timely treatment	15.70%
Saved time and money	50.41%
Ability to earn more as a result of good health	4.96%
Happiness in the family	47.11%

The table above shows the benefits of the MMU as perceived by the beneficiaries in the BTPP (MMU-1) site. Free consultation from a doctor is reported as a benefit by 38.84% of the beneficiaries. Free medicine as a usefulness is stressed by 79.34% of the beneficiaries. Improvement in health is reported by 71.90% of the beneficiaries, free access to medical facility is reported by 8.26% of the beneficiaries. Apart from receiving direct benefits such as consultation, diagnosis and medicine, the MMU service has resulted in indirect benefits like saving time and money (50.41%), improvement in the ability to earn more money (4.96%) and increased happiness in the family because of good health (47.11%).

A graphical representation of the above data is given below.

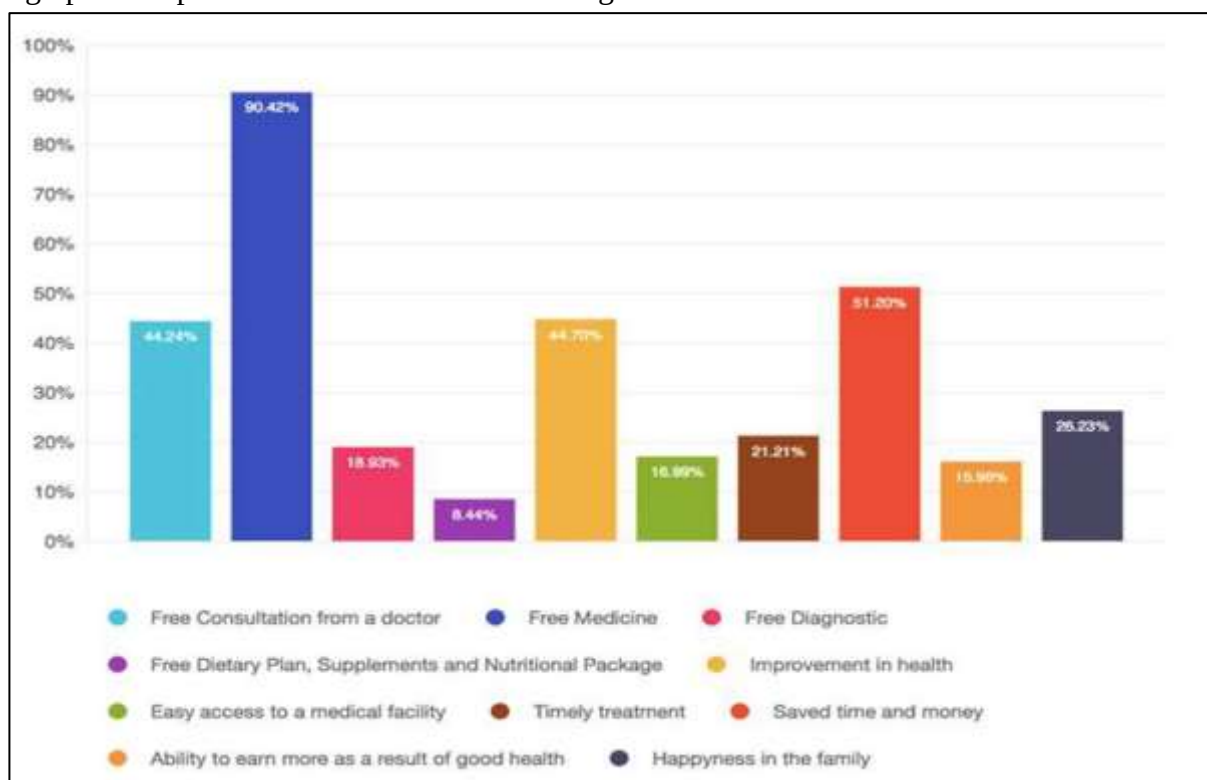

Figure 41 Benefits Received by the Beneficiaries

5.2.11 Comparative Analysis of Health Disease before and After Treatment with MMU

A comparative analysis has been drawn to quantify the impact of the MMU. The health incidences in the project area had been compared before arrival and after arrival of the Mobile medical unit service in the area.

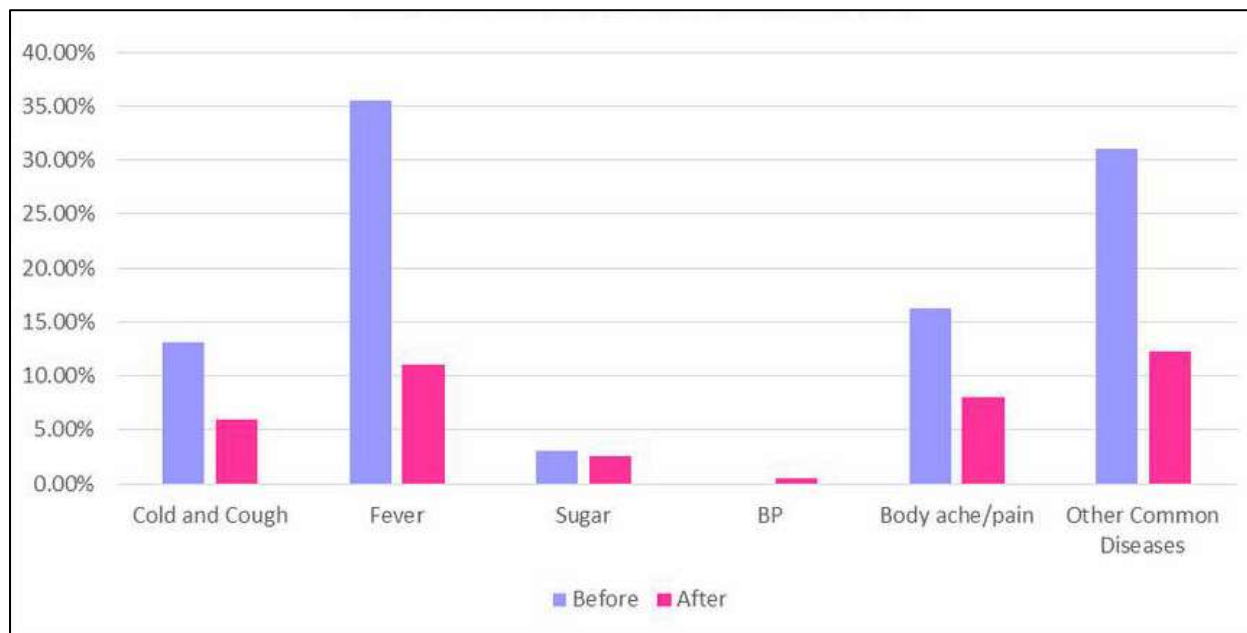

Figure 42 Comparative Analysis of health issues before and after services of the MMU

From the results it can be concluded that there has been a visible decrease in the health issues among the people of the Buxar Thermal Power Project (MMU-1) area after the commencement of the services of the MMU. The cold and cough among people decreased from 13.10% to 6%, fever incidences decrease from 35.50% to 11% and other common diseases such as headache, stomachache decreased from 31.10% to 12%. There has been slight decrease in sugar incidences and a few cases of B.P. have been recorded from the respondents, which were not reported before.

5.2.12 Usefulness of the MMU Program

The beneficiaries of the MMU were asked across various sites about various outcomes and results of the initiative that they experienced. They were instructed to give a rating on a scale of very poor-poor-good-satisfactory-excellent. The following table shows the percentage-wise distribution of these ratings on different parameters of health improvement, disease control, child mortality rate, decrease in financial burden, and overall positive impact on family health.

Impact Assessment of CSR Projects FY 2020-21

Table 17 Usefulness of the MMU Program

Project Site: BTTP (MMU-1)	No response (%)	Very poor (%)	Poor (%)	Good (%)	Satisfactory (%)	Excellent (%)
Health improvement	1.24	1.38	7.70	85.40	3.43	0.85
Disease control	36.90	1.71	5.25	52.70	3.02	0.42
Child mortality rate	0.00	0.88	2.59	90.10	2.57	3.86
Decrease in financial burden	24.46	1.71	5.15	63.09	5.15	0.44
Overall positive impact on family health	1.71	1.75	5.57	86.26	4.29	0.42

- 85.40% of the beneficiaries considered that the MMU led to a significant improvement in health in the project region, while 3.43 % of the population believed that the improvement was sufficient. 0.85% of the beneficiaries indicated that the health improvement has been outstanding. 7.70% of recipients believe that the services have been ineffective in improving health, with 1.38 % stating that it has been very ineffective. 1.24% of the recipients have supplied no response to this criterion. The overall health improvement in the region has been positive.

- 52.70 percent of beneficiaries say the MMU services have been effective in preventing sickness. 3.02% of the beneficiaries say that the illness control has been adequate, whereas 0.42 % believe that it has been great. 5.25 percent and 1.71 percent of recipients consider that disease control services have been inadequate and inadequate, respectively. 36.90% of the recipients do not have an opinion regarding this criterion. Beneficiaries believe that the programs have been effective in preventing sickness.

- 90.10 of the recipients believed that the MMU services were effective in lowering the child mortality rate in the region. 2.57 percent and 3.86 percent of the recipients rated it as adequate and excellent, respectively. 2.59 percent and 0.88 percent of the recipients stated that the services were inadequate and inadequately inadequate in reducing the child death rate. Beneficiaries reported that the services have been effective in reducing the infant mortality rate in the project region.

- 63.09% of the beneficiaries believe that the MMU services have been effective in decreasing their financial burden, whereas 5.15 % of the beneficiaries have rated the services as satisfactory and 0.44 % has rated the services as exceptional. 5.15 percent and 1.71 percent of beneficiaries rated the services as inadequate and inadequate, respectively, in alleviating their financial burden by providing free care. 24.46 percent of the recipients have not supplied any feedback on this criterion. The majority of recipients have reported favorable outcomes regarding the MMU's financial burden-reduction programs.

- 86.26 % of beneficiaries feel that the MMU services in their area have a good overall favorable influence on family health, whereas 4.29 % and 0.42 % of beneficiaries noted that the services were satisfactory and exceptional, respectively. On the other hand, 5.57 percent of beneficiaries felt it has been inadequate, and 1.75 percent of beneficiaries noted that the services have had a very inadequate influence on the family as a whole. 1,71 % of the recipients have supplied no response

to this criterion. In general, the MMU's services have had a favorable impact on the family's health.

Figure 43 Doctors consultation at the MMU

5.2.13 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 18 Observations and Inputs of the MMU Program

Key Observations	Impacts of the Projects	Suggestions for Improvement
In the year 2020-21, a total of 20,321 people benefitted from the initiative. About 50% of the beneficiaries are repeated patients of the MMU	People are able to avail medical services at their doorsteps which were not possible earlier.	-
The mobile medical unit is equipped with instruments to test B.P., hemoglobin level and diabetes. However, the B.P. machine and glucometer often have technical problems due to which beneficiaries were not able to avail these services.	The beneficiaries are availing basic tests at doorsteps due to MMU. This free service also helps in lessening their financial burden.	There should be a provision of timely maintenance and care of the equipment in the MMU.
The MMU has a doctor, a technician and a druggist for providing medicines. However, there is no availability of doctor in the MMU from the past	The beneficiaries are availing the diagnosis, reports and medicines from the MMU only.	-
During the COVID times the doctors used PPE kit and encouraged social distancing among the patients.	The people have received awareness and are motivated.	-
Majority of beneficiaries were observed to be having	People are availing diagnostic and drugs for their	An inventory can be maintained to monitor the

Impact Assessment of CSR Projects FY 2020-21

Key Observations	Impacts of the Projects	Suggestions for Improvement
consultations for knee pain, diabetes, blood pressure and eye itching problems. However, it was observed that some beneficiaries are frequently visiting the MMU to avail medications for different diseases.	common problems through the mobile medical unit.	use of medications by the beneficiary.
Mobile van is used as an ambulance in emergency cases.	The patients are availing benefits during emergencies from the MMU. They can contact the MMU from their mobiles and can ask to use the MMU as an ambulance.	-
The MMU visits each village once a month in pre-assigned areas.	The patients are availing the benefits of MMU once in a month for their check-ups.	The MMU can increase their frequency from once a month to twice or thrice a month as there are regular patients of MMU and they might not be available on the assigned day of the visit of the MMU.
From time-to-time, MMU conducts some tests for all the people living in the area for the diseases like Dengue which were spreading rapidly.	Helps in ending an endemic before it becomes a huge problem.	

5.2.14 Feedback from Beneficiaries

Positive Feedback	Suggestive Feedback
- The MMUs are punctual in their routines to reach the assigned villages. The doctors are well trained to deal with the problems. “सुविधाएं अच्छी हैं और डॉक्टर समाज के प्रति अच्छा काम कर रहे हैं” as said by beneficiaries.	Since in Buxar area water impurities are high and arsenic based accordingly more customized treatment may be offered.

5.2.15 Assessing the impact of the Initiative (OECD)

Table 19 Impact of the Initiative

Parameter	Scale	Description
Relevance	High	The primary healthcare facilities were far away from the villages and there was a need for the healthcare services for the locals. The people living in the project affected areas were not able to avail primary healthcare services either due to bad service or it being at an inaccessible distance. So, the MMU served the purpose of providing primary healthcare services for the needy.
Effectiveness	High	The MMU is able to provide primary healthcare services to the people living in the remote areas in villages BTPP area. People from all age groups are availing facilities provided by the MMU. People do not hesitate to take services from the MMU due to the good and friendly nature of the doctors and paramedics towards them. People who used to ignore common ailments of sickness to avoid going to the hospitals are also taking services from the MMU. The people were able to have timely diagnosis and medicines for their health issues
Impact	High	Approx. 20,000 thousand people were able to avail healthcare services through the MMU in the project affected areas. The beneficiaries were able to avail healthcare facilities without a financial burden and within their reach. People start seeking medical attention for common ailments which were earlier ignored by them Those women who do not used to have doctor's check-up due to distance from the healthcare facilities also started seeking medical facilities from the MMU. So not only MMU provides medicines to the women but also empowered them.
Coherence	High	This initiative is a part of the "National Health Mission" by the GoI. The initiative by SJVN align with the national CSR theme of school education and healthcare and with the Sustainable Development Goal-3 (SDG 3) i.e., health and well-being. Apart from that, MMU also aligns with various policies by the government.
Efficiency	High	The program is efficient in its approach to reach people living in the remote areas. More than 68% of the beneficiaries are repeated beneficiaries of the MMU and more approximately 1666 people were able to avail the services through the MMU daily.
Sustainability	High	Once a patient connects with an MMU service, they get an MMU service card through which they can avail services from the MMU for a lifetime. Patients have been getting services from the MMU as long as 6-7years. This program is sustainable in its approach as it adapts with other programs also to deliver the best results and can be sustained for a long period of time.

5.2.16 Average rating of the MMU service by beneficiaries

Review of programs and services is important since it helps understand the needs of the beneficiaries better and improvise the initiatives accordingly. In each of the project sites the beneficiaries were asked to give a rating of MMU services on a scale of 1 to 5. The rating of BTPP(MMU-1) is provided in the following diagram.

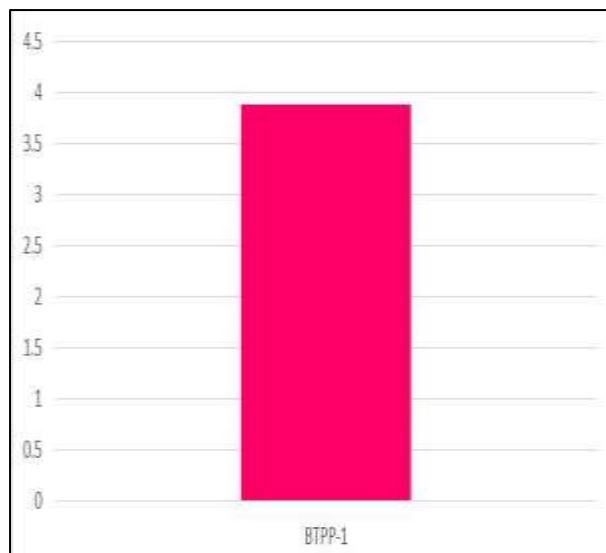

Figure 44 Rating of the MMU Service

In BTPP (MMU-1) an average rating of 3.88 on a scale of 5 is provided to the MMU facilities by the beneficiaries based their facilities and general likeliness of the MMU by the beneficiaries.

5.2.17 Overall conclusion and Way Forward

The beneficiaries are able to avail free healthcare services and as a result health issues among people have decreased after the commencement of the mobile health services. Overall, the patients are satisfied by the medical consultation, medicines and routine check-ups and treatment received.

5.3.1 About the Project

SJVN is running 01 Mobile Medical Unit in the area covering about 10 villages of Buxar Thermal Power Project BTPP (MMU-2) based in Bihar. The field teams have met a number of beneficiaries in many villages in project areas.

5.3.2 MMU-2 Service in BTPP area

A flagship CSR Project under the aegis 'Satluj Sanjivani Sewa' provides free health consultations to rural residents in the project area using Mobile Medical Units (MMU's). The initiative was undertaken on behalf of SJVN Foundation by HelpAge India, a well-known NGO. The program is long running and presents efficiency in nature as more people are able to benefit from the initiative.

In the FY 2020-21, a total of 20,321 people had been treated by the MMU team in the year following a financial implication of Rs. 72 lakhs. Pathological test such as blood tests, Diabetes test and hemoglobin testing etc. facilities are available in the MMU in the project site and consultation for all kind of problems are provided to people. The project affected people are receiving free medicines for their ailments along with free medical consultation.

5.3.3 Coverage of the MMU

- No. of villages the MMU cover: 10
- No. of MMUs in the area: 01

5.3.4 Infrastructure in the MMU

Table 20 Infrastructure in the MMU

	Name of Equipment	Quantity
Medical equipment (List all the equipment in the MMU)	Mobile Van	01
	Pharmacy	01
	Pathological lab	01
	Medical Test	Many for generic testing
	Equipment	Many for generic testing
Other equipment in the MMU (E.g.: Chairs, tables, banners etc.,)- List all the equipment	Backdrop/ Banner:	Yes

5.3.5 Details of Beneficiaries

Total beneficiaries (average beneficiaries in a month in the year 2020-21)

Village name	Males	Females	Total
1. Kanaknarayanpu	61	92	153
2. Nyaypur	95	63	158
3. Dharmagatpur	31	47	78
4. Baghelwa	64	76	140
5. Kathgharwa – Hussainpur	88	103	191
6. Chausa	134	156	290
7. Chunni	170	147	141
8. Bahadurpur	79	62	89
9. Dhudhani	31	58	235
10. Pawani	42	38	60
TOTAL	795	842	1535

Treatment provided by MMU

The type of diseases for which MMU provide support treatment and facilities are as follows

	➤ Cold/cough/fever ➤ COPD/Asthma ➤ Osteoarthritis ➤ Hypertension ➤ Skin disorder ➤ Diabetes mellitus ➤ Gastritis/ Peptic ulcer ➤ Ear ache/ ear disorders ➤ Seasonal ➤ Other
---	--

5.3.6 Socio Economic Profile of Beneficiaries

This section explains in details the traits of the sample population. It focuses on the key demographics of the beneficiaries interviewed for which primary information was collected through a questionnaire. The study captured information on various demographic parameters like gender, social affiliation, religious distribution of beneficiary, type of family, size of families, age group, educational qualification, occupation, annual salary. This analysis is presented for Buxar Thermal Power Project (MMU-2).

Gender and Social Affiliation of Beneficiaries

Figure 46 Gender of Beneficiaries

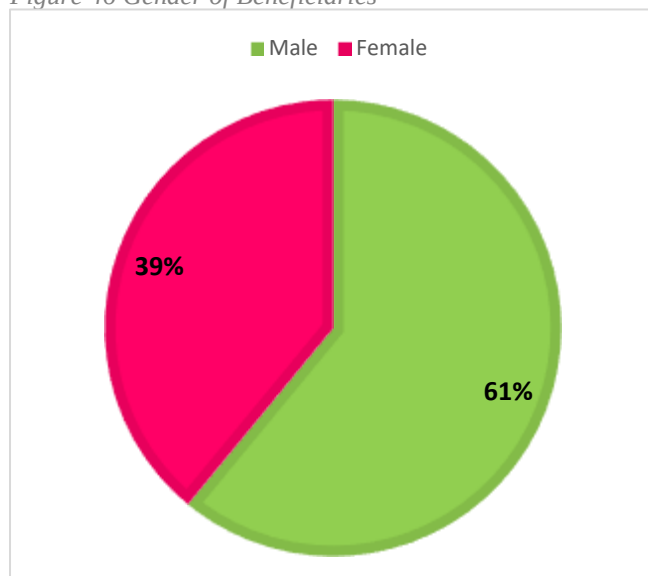

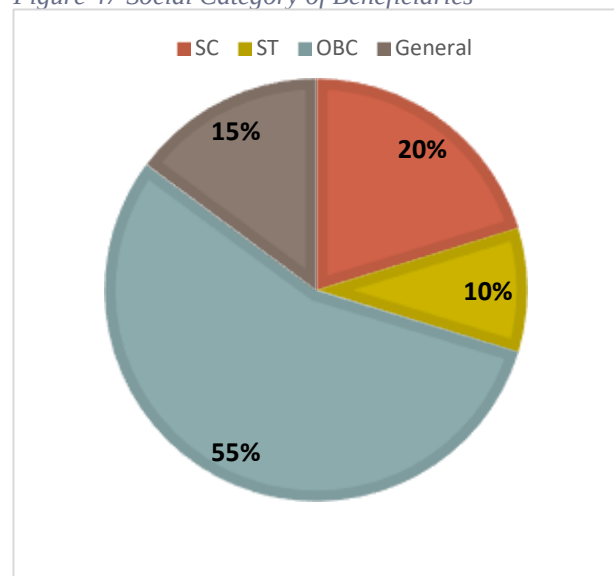

Figure 47 Social Category of Beneficiaries

The present study covered a total of 30% of the total population in BTPP (MMU-2) area. The gender analysis suggested that the proportion of male is more than female in the project area.

In BTPP (MMU-2) area, the gender analysis present those in a population mix, 61% of the beneficiaries are male whereas 39% beneficiaries are female as shown in figure 46.

The class or category wise distribution of the beneficiaries is provided in the above figure 47. It is clear from the figure that OBC (55%) constituting the largest group. The SC (20%) category is the second- largest group of beneficiaries followed by general (15%) and ST (10%).

Religious Distribution and Age Group of Beneficiaries

The figure below shows the distribution of beneficiaries of SJVN CSR projects according to religion.

Impact Assessment of CSR Projects FY 2020-21

Figure 48 Religious distribution of Beneficiaries

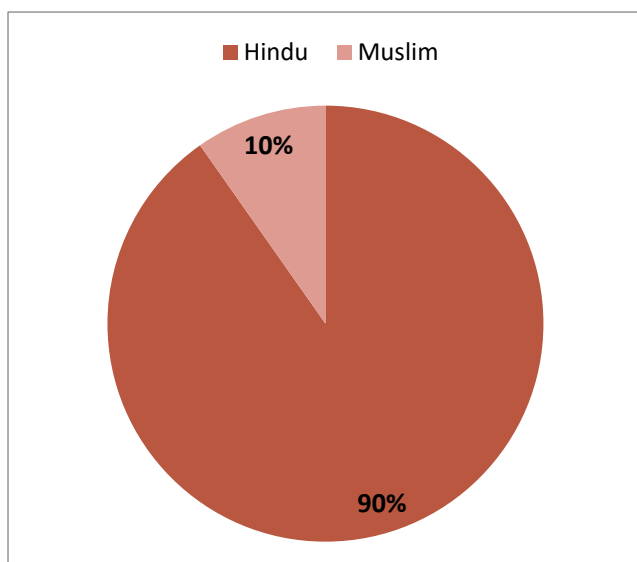

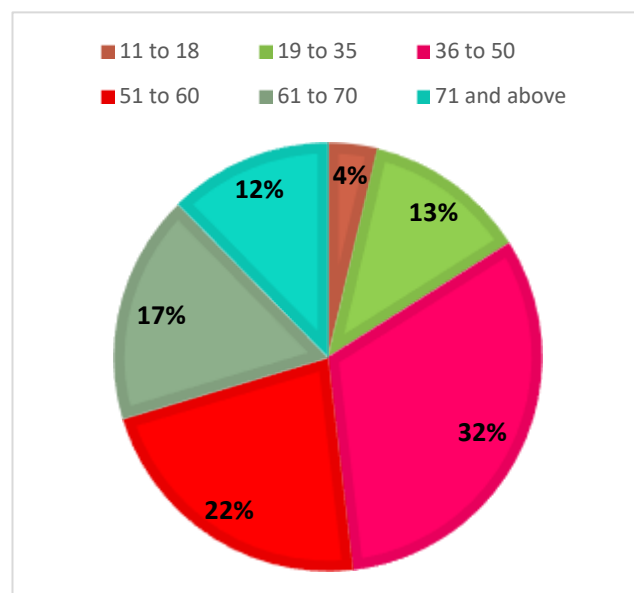

Figure 49 Age of Beneficiaries

The above figure 48 shows that a large majority of 90% of the beneficiaries belong to Hindu community. A small percentage (10%) of beneficiaries belongs to Muslim.

The above figure 49 demonstrates that majority (32%) of the beneficiaries fall in the age group of 36 to 50 years of age. Followed by an age group of 51 to 60 years (22%). In age group of 61 to 70 years 17% of the beneficiaries are availing MMU services and between 19 to 35 years of age 13% of beneficiaries are availing MMU services. A total of 12% beneficiaries fall in the age group of 71 and above years of age. Only 4% are in the age group of 11 to 18 years of age. No significant number of beneficiaries is recorded in 0 to 5 and 6 to 10 years of age.

Type and size of family

Figure 50 Type of Family of Beneficiaries

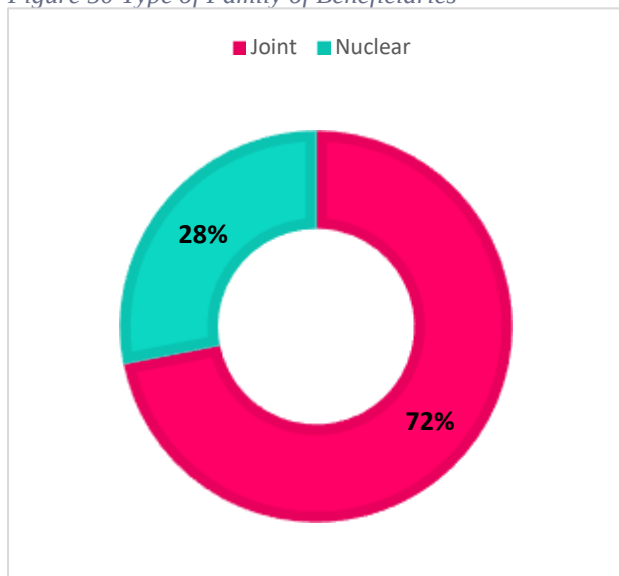

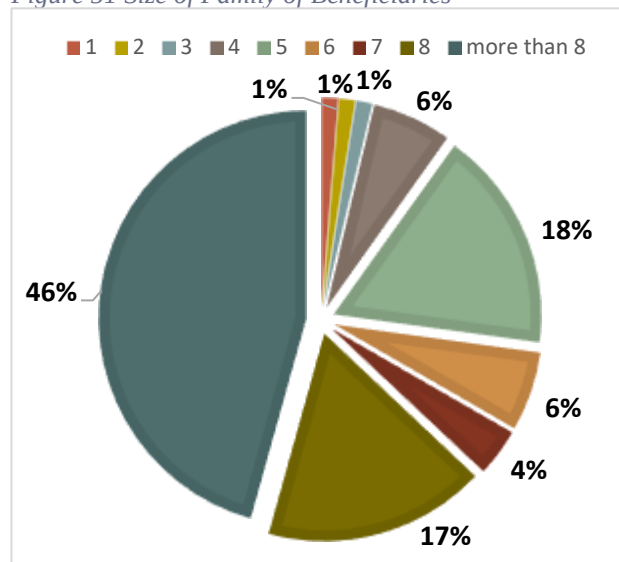

Figure 51 Size of Family of Beneficiaries

A total of 72% of the families live in joint families in the project areas whereas only 28% live in nuclear family as shown in figure 50 while it is interpreted from figure 51 that majority of population (46%) have more than 8 family members in their families followed by 5 (18%) and 5 (17%). 4 and 6 members were recorded to be 6% equally.

Educational Qualification and Occupation of Beneficiaries

Figure 52 Educational Qualification of Beneficiaries

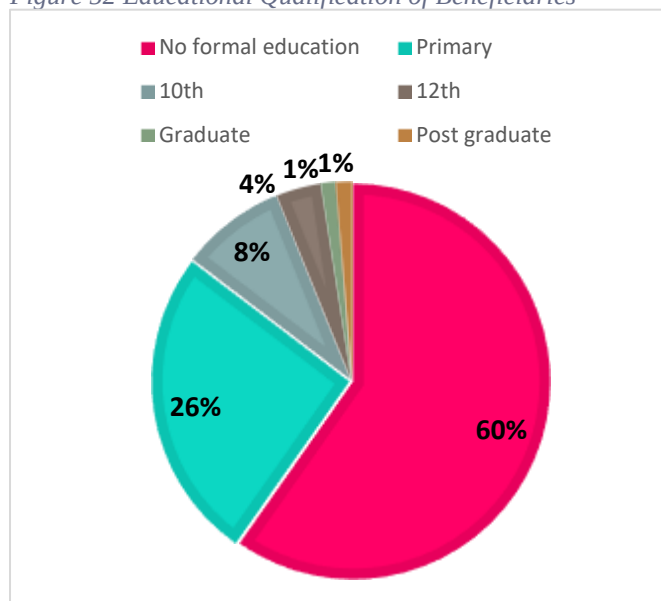

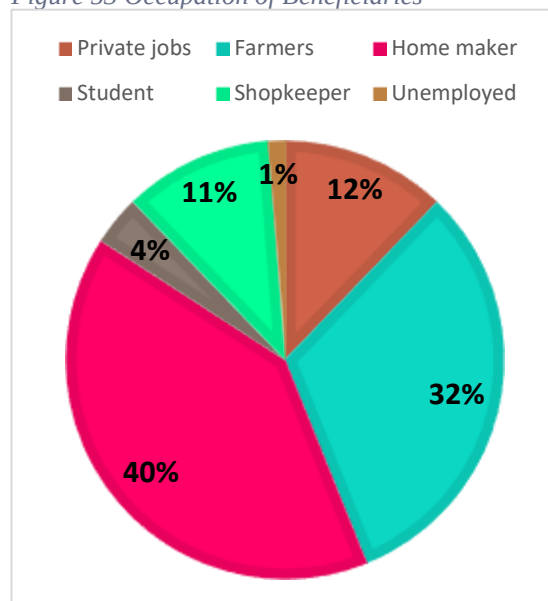

Figure 53 Occupation of Beneficiaries

It is shown in figure 52 that majority of beneficiaries (60%) have not received formal education in the project affected areas. The reasons include belonging to BPL families and non-availability of government-run school in the vicinity. About 26% of people have completed only primary education and 8% have studied till matriculation and 4% have completed 12th. The graduates and post graduates consists of 2% of population the project areas.

The occupations of the beneficiaries in BTPP-2 range from farmer to home maker and being unemployed. According to figure 53, majority (40%) of the beneficiaries are homemaker followed by being farmers (32%). 12% of the beneficiaries are engaged in private jobs and 11% are shopkeepers. 4% of the beneficiaries are students and 1% are unemployed.

Annual Income of Beneficiaries

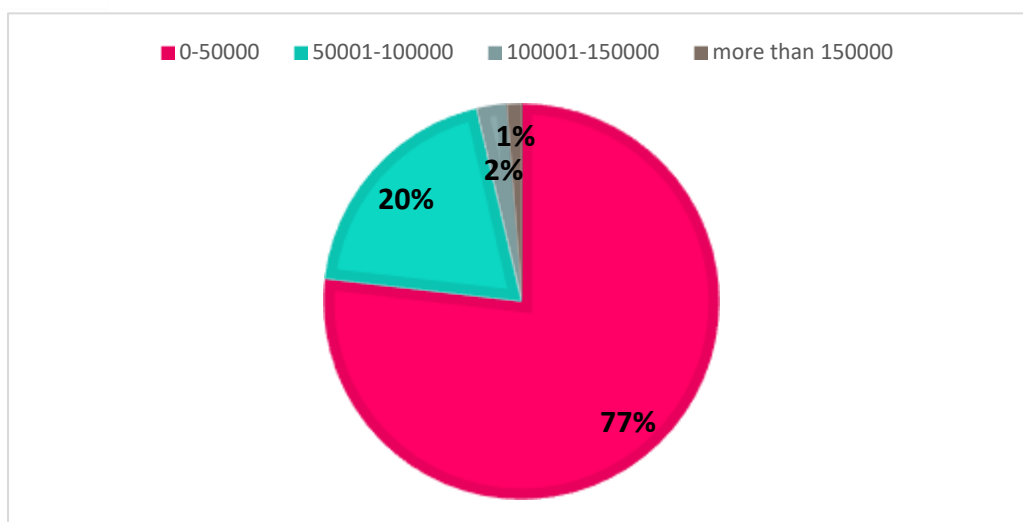

Figure 54 Annual Income of Beneficiaries

The beneficiaries living in the BTPP belong to lower income group. About 77% of the beneficiaries earn an annual income of up to Rs. 50,000. About 20% earn Rs. 50,000 to Rs. 1, 00,000 and 2% people earn more than Rs. 1 lakh per year. Only 1% of the beneficiaries are earning more than 1.5 lakh annually. People from lower income are mostly availing this facility given by MMU. Thus, the services are reaching to those people who are really in need of one.

5.3.7 Health Facilities Covered in Villages at BTPP (MMU-2)

Health facilities in villages covered at SJVN BTPP (MMU-2)

The present section discusses the prevalent diseases and healthcare infrastructure facilities present in the project sites of the Mobile Medical Unit. The findings through the primary research in this section are going to be used in the further sections to draw comparisons in the facilities and the benefits received by the localities from the Mobile Medical Unit.

Health infrastructure

Not only does better health suggest higher human development, but it also serves as a key indicator of economic progress. A gap in service delivery caused by the lack of primary healthcare for the poor in rural areas usually presents a business opportunity for quacks and rural medical professionals (RMPs). In the villages from the project locations, the current study noted the availability of health infrastructure.

To better understand health seeking behavior, the study mapped access to health infrastructure in the villages encompassed by SJVN Project location in Buxar Thermal Power Project- (MMU-2).

Impact Assessment of CSR Projects FY 2020-21

Table 21 Health Infrastructure in the Villages

Healthcare Infrastructure	Primary Health Center	Community Health Center	District Health Hospital	ASHA Worker	Ayurvedic Center	Midwife	Quacks
Availability		✓				✓	
Health Care Infrastructure	Registered Medical Practitioner	Private Clinic	Private Hospital	Diagnostic Labs	Homeopathy Center	Dispensaries/Pharmacies	Emergency Health Service
Availability						✓	✓

The project area lacks a primary health center which is a basic necessity for the people. Among the available health infrastructure community health center, Midwife, Dispensaries/pharmacies and emergency health services are present. The accessibility of these centers is questionable as they are located quite far from the project areas.

5.3.8 Incidences of Health Issues as per Baseline Studies

To understand the health issues faced by people before the commencement of MMU in the area, the study mapped the incidences of health issues prior to MMU.

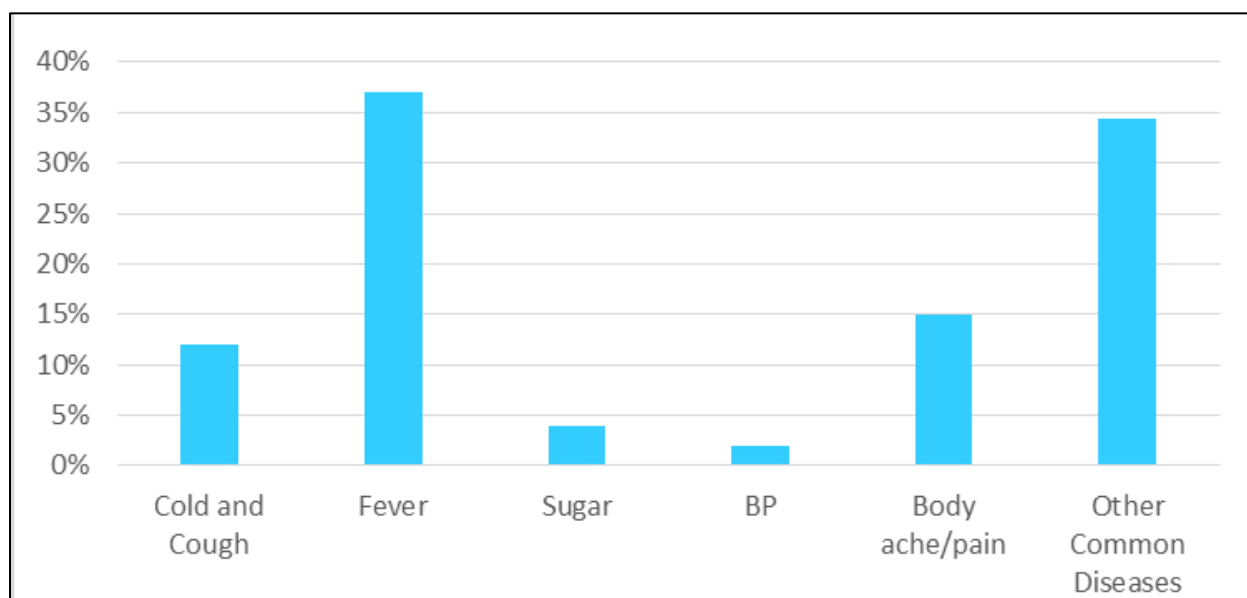

Figure 55 Incidences of Health issues before arrival of MMU

From the results, it can be noted that Fever (37%) and Other common disease such as headache, stomachache (34%) are the major health issues faced by the people residing in BTPP-(MMU-2) followed by Body ache/pain (15%) and Cold and cough (12%). Incidences of Sugar and B.P. are 4% and 2% respectively.

5.3.9 Quantifying the Impact of MMU through Primary Research

Benefits of MMU as Perceived by Respondents

The beneficiaries of the MMU program received various facilities such as free consultation, basic diagnostic and treatment, and free medicine. The following table shows the percentage data of benefits received by the beneficiaries.

Table 22 Benefits of MMU as perceived by Beneficiaries

Type of Benefits	Percentage of Responses
Free Consultation from a doctor	52%
Free Medicine	94.6%
Free Diagnostic	21.07%
Free Dietary Plan and Supplements	9.54%
Improvement in Health	46.78%
Easy access to a medical facility	26.87%
Timely treatment	23.87%
Saved time and money	53.30%
Ability to earn more as a result of good health	13.52%
Happiness in the family	23.64%

The table indicates that free consultation from doctor is reported as a benefit by 52% of the beneficiaries, free medicine (94.6%), free diagnostic (21.07%), improvement in health (46.78%). Apart from receiving direct benefits such as consultation, diagnosis and medicine, the MMU service has resulted in indirect benefits like saving time and money (53.30%), improvement in the ability to earn more money (13.52%) and increased happiness in the family because of good health (23.64%).

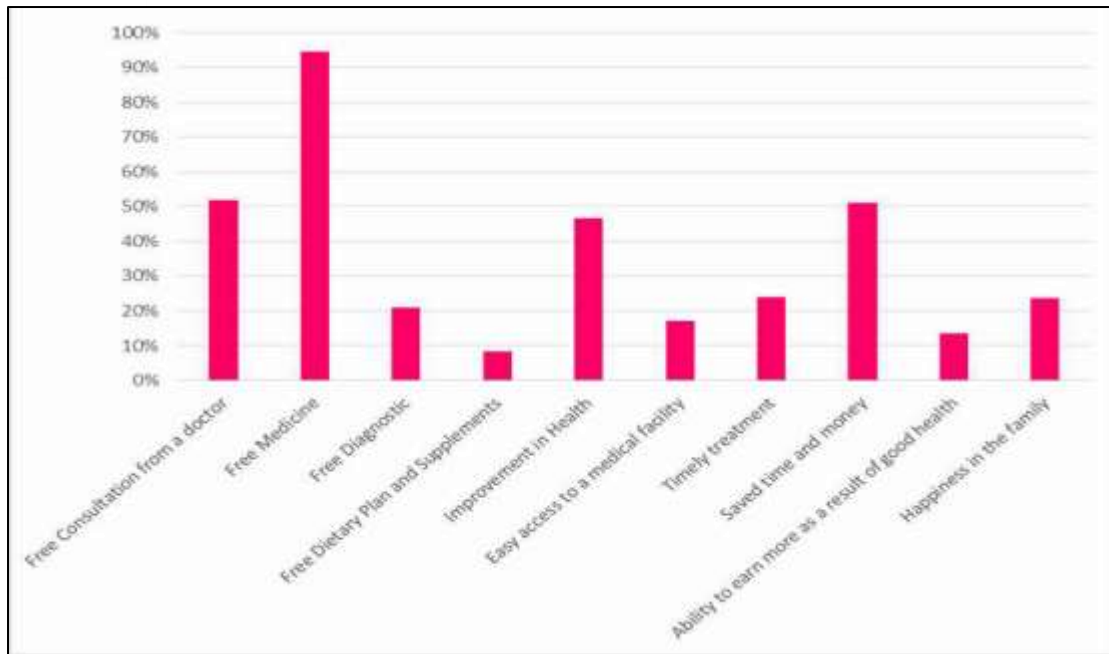

Figure 56 Benefits Received through MMU

5.3.10 Comparative Analysis of Health Disease before and After Treatment with MMU

A comparative analysis has been drawn to quantify the impact of the MMU. The health incidences in the project area had been compared before arrival and after arrival of the Mobile medical unit service in the area.

Impact Assessment of CSR Projects FY 2020-21

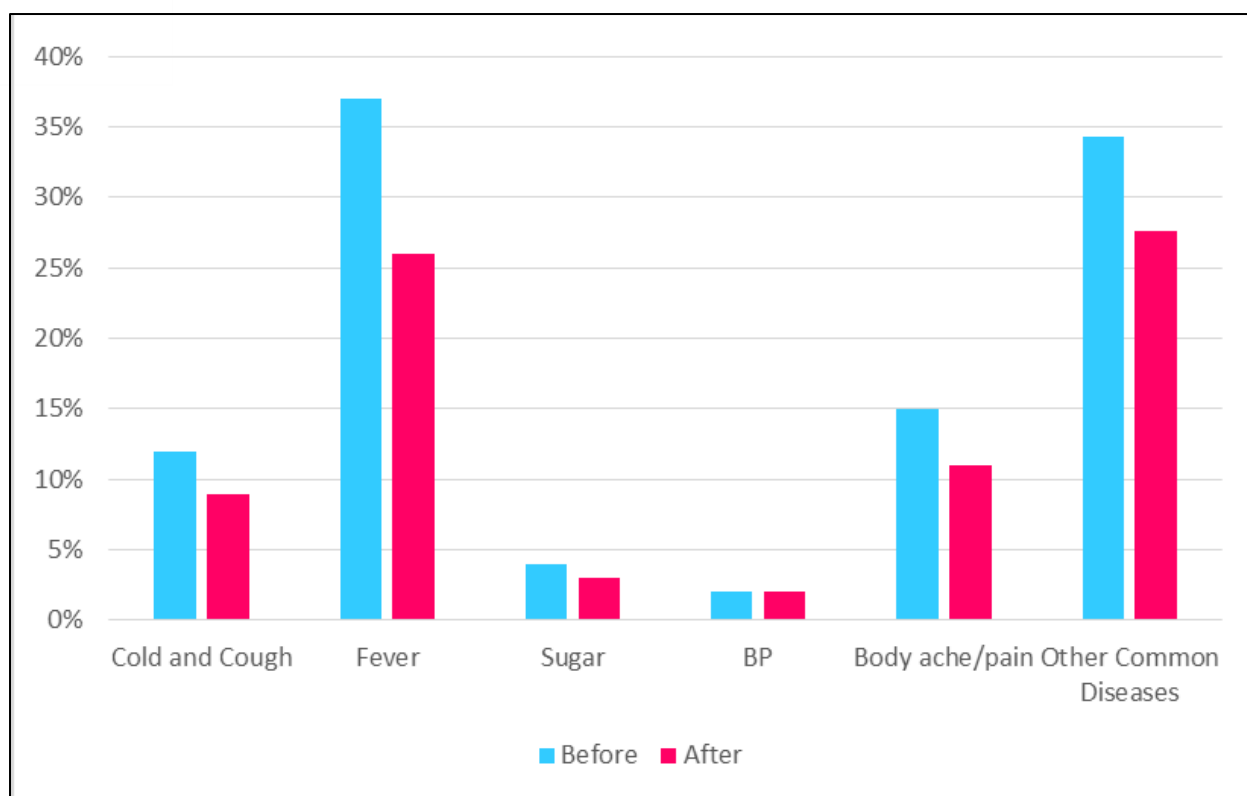

Figure 57 Health incidences before and after treatment through MMU

From the results it can be concluded that there has been a visible decrease in the health issues among the people of the Buxar Thermal Power Project BTPP- (MMU-2) area after the commencement of the services of the MMU. The cold and cough among people decreased from 12% to 9%, fever incidences decrease from 37% to 26% and other common diseases like headache, stomachache decreased from 34% to 28%. There has been slight decrease in sugar incidences and B.P. has been same as recorded from before availing the MMU service.

5.3.11 Usefulness of the MMU Program

The beneficiaries of the MMU were asked across various sites about various outcomes and results of the initiative that they experienced. They were instructed to give a rating on a scale of very poor-poor-good-satisfactory-excellent. The following table shows the percentage-wise distribution of these ratings on different parameters of health improvement, disease control, child mortality rate, decrease in financial burden, and overall positive impact on family health.

Table 23 Usefulness of the MMU Program

Project Site: BTPP (MMU-2)	No response (%)	Very poor (%)	Poor (%)	Good (%)	Satisfactory (%)	Excellent (%)
Health improvement	0.00	0.00	4.51	50	45.49	0.00
Disease control	0.00	0.00	3.65	87.80	8.55	0.00
Child mortality rate	0.00	0.00	1.21	91.46	7.33	0.00
Decrease in financial burden	1.21	1.21	4.87	54.87	37.84	0.00

Impact Assessment of CSR Projects FY 2020-21

Project Site: BTTP (MMU-2)	No response (%)	Very poor (%)	Poor (%)	Good (%)	Satisfactory (%)	Excellent (%)
Overall positive impact on family health	2.43	0.00	4.86	82.96	9.75	0.00

- Fifty percent of beneficiaries believe that the MMU services have been effective in improving their health, while 45.49 percent are satisfied with the services. 4.51% of beneficiaries reported that the MMU services were ineffective at promoting health. No answers were reported for the categories excellent and very poor.
- 87.80% of the project's beneficiaries reported that the MMU services were effective in preventing disease in the project region. 8.55 percent of recipients are satisfied with the services. 3.65% of the beneficiaries said that disease control services had been inadequate. No answers were reported for the categories excellent and very poor. Overall, the beneficiaries have reported that the disease-prevention services are satisfactory.
- 91.46 % of the beneficiaries noted that the MMU services are effective in reducing the child mortality rate, whereas 7.33 % of the beneficiaries deemed it satisfactory and 1.21 % of the beneficiaries deemed it ineffective. While no responses for outstanding and very poor has been recorded.
- 54.87 % of beneficiaries believe that the MMU services have been good at reducing their financial burden, while 37.84 % of beneficiaries have noted that the services have been great at reducing their financial burden. 4.87 percent and 1.21 percent of beneficiaries rated it as poor and extremely poor, respectively, for relieving financial pressure. While 1.21% of beneficiaries have not provided any response on this criterion. Overall, the recipients deemed the services to be satisfactory.
- 82.96 % of beneficiaries believe that the MMU services have a favorable overall influence on family health, whereas 9.75 % of beneficiaries report that the services have been satisfactory. 2.43 percent of the beneficiaries have not responded to this question and 4.86% has responded it poor. There have been no answers recorded for very poor and excellent.

5.3.12 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 24 Observation and Impact of the Program

Key observations	Impacts of the projects	Suggestions for improvement
The MMU is a remote service and reach in the villages at designated times in fixed places. The MMU service is	The people living in remote areas that do not have access to primary healthcare services are able to avail treatments through this	MMU has certainly helped in increasing awareness about healthcare services in the villages where it operates. But going forward, the services could be

Impact Assessment of CSR Projects FY 2020-21

close enough to the houses to commute without a vehicle.	Mobile Medical Unit.	considered for being extended to other villages around the BTPP-2 plant location.
Diagnosis, tests, medicines are provided free to the patients through the MMU. Sometimes the doctors refer a patient in the hospital for a treatment or diagnosis, the MMU acts as an ambulance for the patients and their treatment and medicines in the referred hospitals were also free.	The patients with financially weak back ground do not have to bear any financial burden for seeking health care facilities and medical treatments.	-
In the year 2020-21, 19828 patients have been benefitted from the MMU.	Many people are able avail treatments through the MMU in the year 2020-21.	SJVN can look forward and explore possibility of investing in the primary health center in the area rather than continuously spending on the operations of the MMU.
The concerned stakeholders (beneficiaries of the program) reported that the behavior of the doctors is good with the patients.	The patients are being treated kindly by the doctors in the MMU.	Going forward an online/offline log portal should be kept to assess the availability of the doctor on site and assigning of a substitute doctor if needed.
Diagnosis, testing and medicines were made available in the MMU for dengue and diarrhea.	Widespread of diseases such as dengue and diarrhea has been prevented by the MMU with their services and facilities.	-

5.3.13 Feedback from Beneficiaries

Positive feedback	Suggestive feedback
- The initiative of MMU service is a progression towards healthy life and quality of life. This helped the needy to seek timely medical intervention. “बहुत अच्छा इलाज और दवा” shared by the beneficiary.	- MMU should reach designated area timely in order to ease the waiting period for patients. - Since, in Buxar area water impurities are high and arsenic based accordingly more customized treatment may be offered.

5.3.14 Assessing the impact of the initiative (OECD)

Parameter	Scale	Description
Relevance	High	The primary healthcare facilities were far away from the villages and there was a need for the healthcare services for the locals. The people living in the project affected areas were not able to avail primary healthcare services either due to being at an inaccessible distance. The same has been taken care by MMU-2
Effectiveness	High	The MMU is able to provide primary healthcare services to the people living in the remote areas in villages of project affected areas. People from all age groups are availing facilities provided by the MMU. People do not hesitate to take services from the MMU due to the good and friendly nature of the doctors and paramedics towards them. People who used to ignore common ailments of sickness to avoid going to the hospitals are also taking services from the MMU. The people were able to have timely diagnosis and medicines for their health issues. The program is highly effective in its approach to 1) reach remote areas, 2) providing healthcare services to all age groups.
Impact	High	Approx. 19,000 thousand people were able to avail healthcare services through the MMU in the project affected areas. The beneficiaries were able to avail healthcare facilities without a financial burden and within their reach. People start seeking medical attention for common ailments which were earlier ignored by them Avoidance in manifestation of

Parameter	Scale	Description
		diseases like Dengue and Malaria. Promotion and awareness regarding social distancing among the beneficiaries b the doctors and consultants in the MMU.
Coherence	High	This initiative is a part of the “National Health Mission” by the GOI. The initiative by SJVN align with the national CSR theme of school education and healthcare and with the Sustainable Development Goal-3 (SDG 3) i.e., health and well-being. Apart from that, MMU also aligns with various policies by the government.
Efficiency	High	The initiative is efficient in its approach towards providing basic healthcare services to the people living in the project areas. Approx. 1500 patients have been treated through the MMU on a daily basis and more than 70% of the patients are repeated patients availing the services of the MMU.
Sustainability	High	Once a patient connects with a MMU service, they get a MMU service card through which they can avail services from the MMU for a lifetime Patients has been getting services from the MMU as long as 6-7 years. This program is sustainable in its approach as it adapts with other programs also to deliver the best results and can be sustained for a long period of time.

Table 25 Assessing the Impact of the Initiative

5.3.15 Average rating of the MMU service by beneficiaries

Review of programs and services is important since it helps understand the needs of the beneficiaries better and improvise the initiatives accordingly. In each of the project sites the beneficiaries were asked to give a rating of MMU services on a scale of 5. The rating of BTPP-2 is provided in the following diagram.

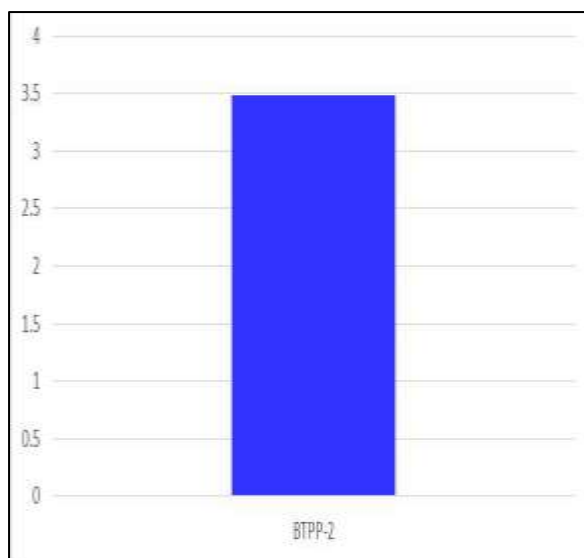

Figure 58 Rating of the MMU Service by Beneficiaries

In BTTP-2 an average rating of 3.49 on a scale of 5 is provided to the MMU facilities by the beneficiaries.

5.3.16 Overall Conclusion and Way Forward

The beneficiaries are able to get free healthcare services, and as a result, the prevalence of health problems has decreased since the introduction of mobile health services. In general, patients are pleased with the medical consultation, medications, and routine examinations and treatment they receive. According to reports, people seek permanent remedies for skin disorders widespread due to high arsenic level in water and are demanding drinking water facilities for better health.

5.4 CSR Project 4: KWPS- Running of 01 MMU in project areas through Help Age India

Villages covered in this Project Site:

Khirwire and Khombhalne

CSR Project Details	
Starting Year:	2017
Completion Year:	2020
State:	Maharashtra
Project Site:	KHIRWIRE WIND POWER STATION (KWPS)
Total Expenditure:	INR. 72.00 Lac

Figure 59 Doctor explaining the initiative of the MMU Program

5.4.1 About the Project

SJVN is running 01 Mobile Medical Unit in the area covering about two villages of Khirwire Wind Power Station based in Himachal Pradesh. The field teams have met number of beneficiaries in many villages in project areas.

5.4.2 About Khirwire Wind Power Station

Khirwire Wind Power Station (47.6 MW)-Khirwire Wind Power Station is located in Khirwire/ Kumbhalane villages, Taluka- Akole, District - Ahmednagar, Maharashtra. The project comprises of 56 Wind Electric Generators (WEGs) of 850kW capacity each and was commissioned in the year 2014-15.

5.4.3 MMU Service in KWPS

A flagship CSR Project under the aegis 'Satluj Sanjivani Sewa' provides free health consultations to rural residents in the project area using Mobile Medical Units (MMU's). The initiative was undertaken by SJVN Foundation through HelpAge India (NGO). The program is long running and presents efficiency in nature as more people are able to benefit from the initiative

In the FY 2020-21, a total of 11,628 people had been treated by the MMU team in the year following a financial implication of Rs. 72 lakhs. Pathological test such as blood tests, Diabetes test and hemoglobin testing etc. facilities are available in the MMU in the project site and consultation for all kind of problems are provided to people. The project affected people are receiving free medicines for their ailments along with free medical consultation.

5.4.4 Coverage of the MMU

- No. of villages the MMU cover 02
- No. of MMUs in the area 01

5.4.5 Infrastructure in MMU

	Name of equipment	Quantity
Medical equipment (List all the equipment in the MMU)	Mobile Van	01
	Pharmacy	01
	Pathological lab	01
	Medical Test	Many for generic testing
	Equipment	Many for generic testing
Other equipment in the MMU (E.g.: Chairs, tables, banners etc.)- List all the equipment	Backdrop/ Banner:	Yes

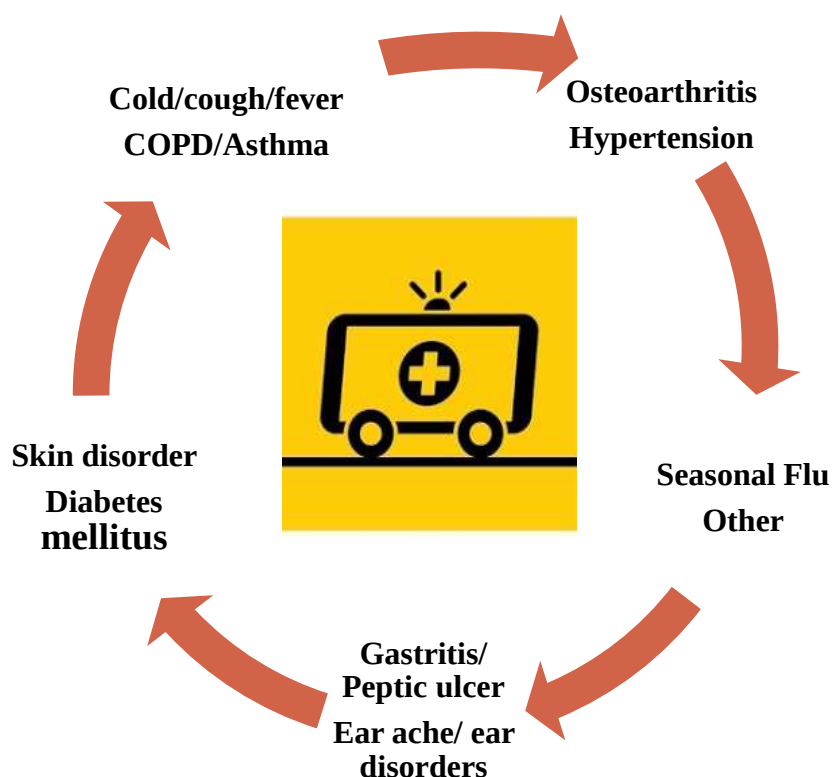

5.4.6 Details of beneficiaries

Total beneficiaries (average beneficiaries in a month in the year 2020-21)

Village name	Males	Females	Total
Khirwire	241	351	592
Khombhalne	165	262	427
TOTAL	406	613	1019

Treatment provided by MMU

The type of diseases for which MMU provide support treatment and facilities are as follows

5.4.7 Socio Economic Profile of Beneficiaries

This section explains in details the traits of the sample population. It focuses on the key demographics of the beneficiaries interviewed for which primary information was collected through a questionnaire. The study captured information on various demographic parameters like gender, social affiliation, religious distribution of beneficiary, type of family, size of families, age group, educational qualification, occupation, and annual salary. This analysis is presented for Khirwire Wind Power Station.

Gender and Social Affiliation of Beneficiaries

The present study covered a total of 30% of the total population in KWPS. The gender analysis suggested that the proportion of female is more than male in the project area.

A graphical representation of the social category-wise data is provided below.

In KWPS, the gender analysis presents that in a population mix 60% of the beneficiaries are female whereas 40% beneficiaries are male as shown in figure 60.

Figure 60 Gender of Beneficiaries

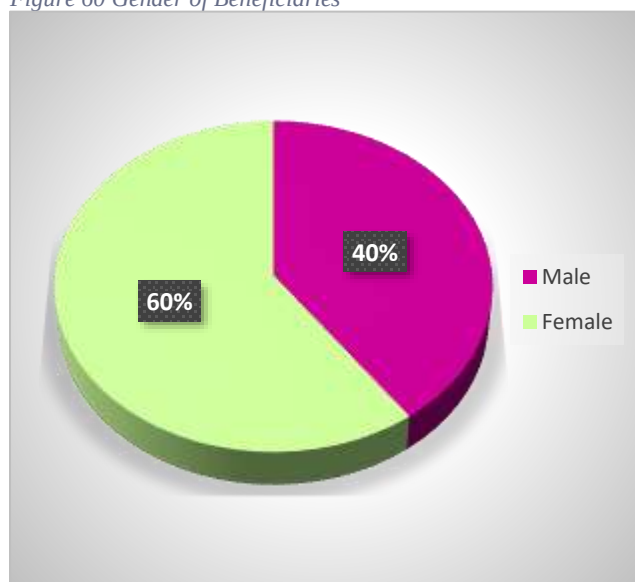

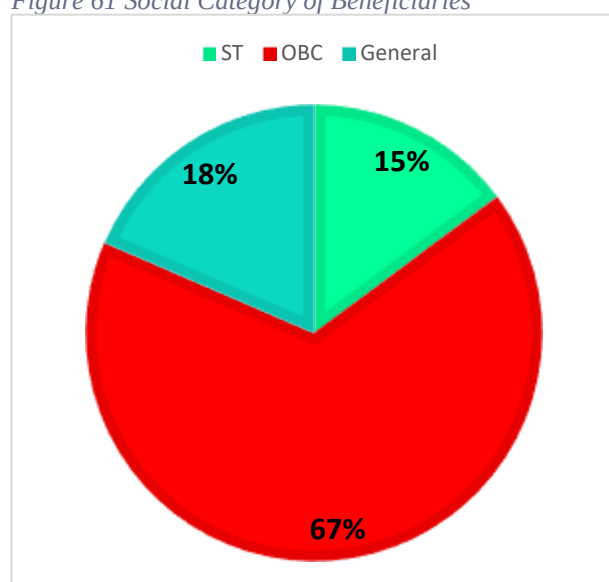

Figure 61 Social Category of Beneficiaries

It is clear from Figure 61 that OBC (67%) constituting the largest group. The general category (18%) is the second-largest group of project beneficiaries and ST constitutes 15% of the beneficiaries in project area.

Type and Size of Family of Beneficiaries

Figure 62 Type of Family of Beneficiaries

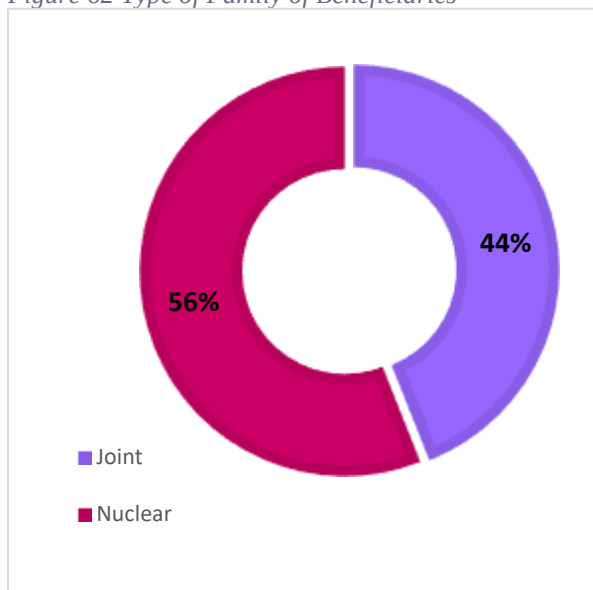

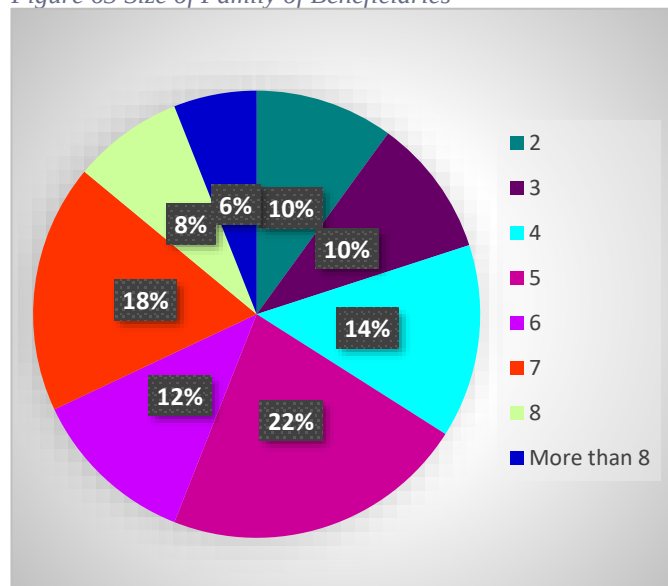

Figure 63 Size of Family of Beneficiaries

A total of 56% of the families live in nuclear families in the project areas whereas only 44% live in joint family as shown in Figure 62. While Figure 63 shows that majority of the population (22%) has five members in the family demonstrating the majority of nuclear families in the project areas. Followed by 7 members (18%) and 4 members (14%) in the families.

Age Group and Educational Qualifications of Beneficiaries

Figure 64 Age Group of Beneficiaries

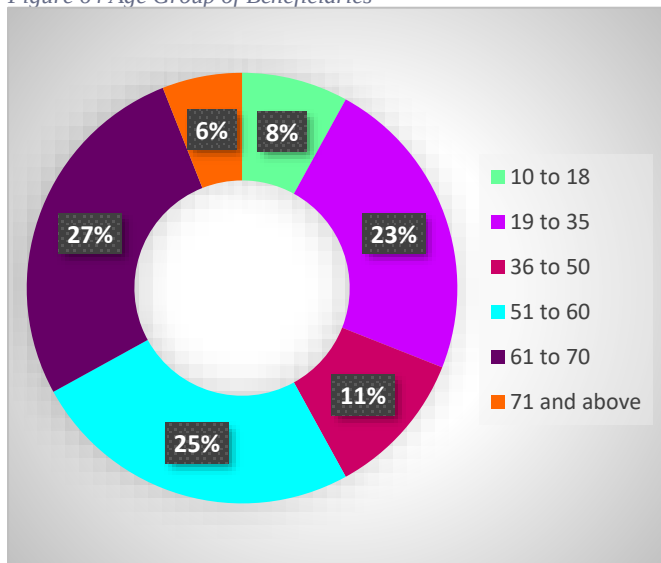

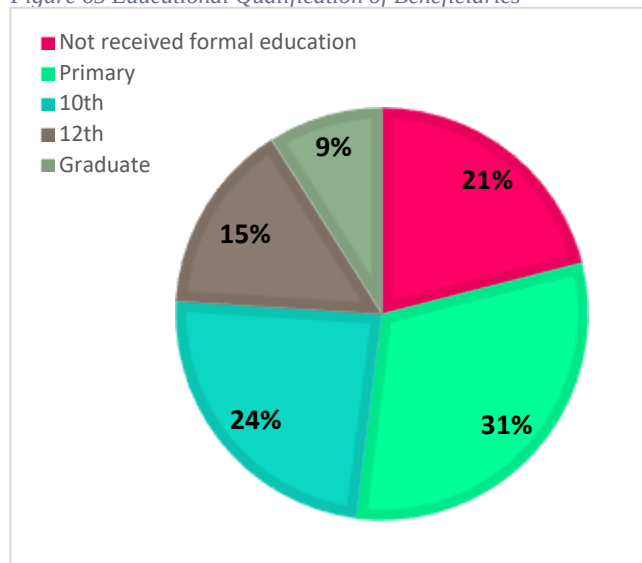

Figure 65 Educational Qualification of Beneficiaries

The figure 64 demonstrates that majority (25%) of the beneficiaries fall into the age group of 51 to 60 years of age. The primary objective to serving the elderly in the healthcare facilities has been achieved. About 23% of the beneficiaries fall into 19 to 35 years of age followed by 36 to 50 years (11%) of age.

It is concluded from figure 65 that majority (31%) has completed primary education, 24% has studies till matriculation and 15% has completed 12th. Only 9% of the beneficiaries are graduate and 21% of the beneficiaries have not received any kind of formal education.

Occupation and Annual Income of Beneficiaries

Figure 66 Occupation of Beneficiaries

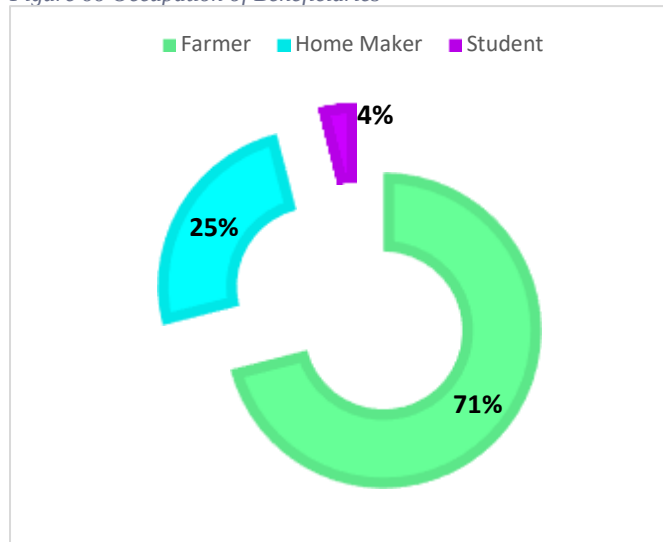

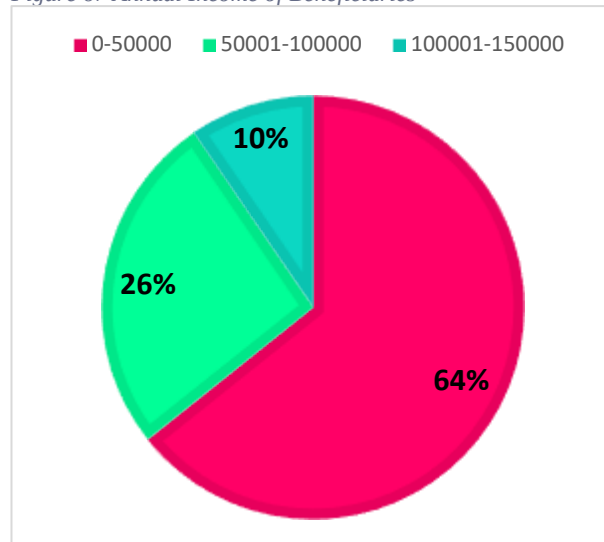

Figure 67 Annual Income of Beneficiaries

The occupations of the beneficiaries in KWPS are mainly involved in farming, home maker and studying. From Figure 66, it was observed that majority (71%) of the beneficiaries are engaged in farming followed by being a home maker (25%). The rest of the beneficiaries are student.

The beneficiaries living in the KWPS belong to lower income group. It is deduced from Figure 67 that about 64% of the beneficiaries earn an annual income of up to Rs. 50,000. About 26% earn Rs. 50,000 to Rs. 1,00,000 and 10% people earn between 1 lakh to 1.5 lakh.

5.4.8 Health Facilities Covered in Villages at KWPS

Health facilities in villages covered at SJVN Project location

The present section discusses the prevalent diseases and healthcare infrastructure facilities present in the project sites of the Mobile Medical Unit. These findings through the primary research in this section are going to be used in the further sections to draw comparisons in the facilities and the benefits received by the localities from the Mobile Medical Unit.

Health infrastructure

Not only does better health suggest higher human development, but it also serves as a key indicator of economic progress. A gap in service delivery caused by the lack of primary healthcare for the poor in rural areas usually presents a business opportunity for quacks and rural medical professionals (RMPs). In the villages from the project locations, the current study noted the availability of health infrastructure.

To better understand health seeking behavior, the study mapped access to health infrastructure in the villages encompassed by SJVN Project location in Khirwire Wind Power Station.

Healthcare Infrastructure	Primary Health Center	Community Health Center	District Health Hospital	ASHA Worker	Ayurvedic Center	Midwife	Quacks
Availability		✓		✓		✓	
Health Care Infrastructure	Registered Medical Practitioner	Private Clinic	Private Hospital	Diagnostic Labs	Homeopathy Center	Dispensaries/Pharmacies	Emergency Health Service
Availability		✓				✓	

In the project site area of KWPS there is no presence of primary health center. The available healthcare infrastructure in the site area is community health center, ASHA worker, midwife, dispensaries/pharmacies and private clinic. The availability of secondary and tertiary healthcare facilities seems a challenge.

5.4.9 Incidence of Health Issues as per Baseline Studies

To understand the health issues faced by people before the commencement of MMU in the area, the study mapped the incidences of health issues prior to MMU. From the results, it can be noted that Fever (47.20%) and Cold and cough (25.50%) are the major health issues faced by the people residing in KWPS followed by other common disease (23.63%). The incidence of Sugar and B.P. are minor (1.80%) in the project site.

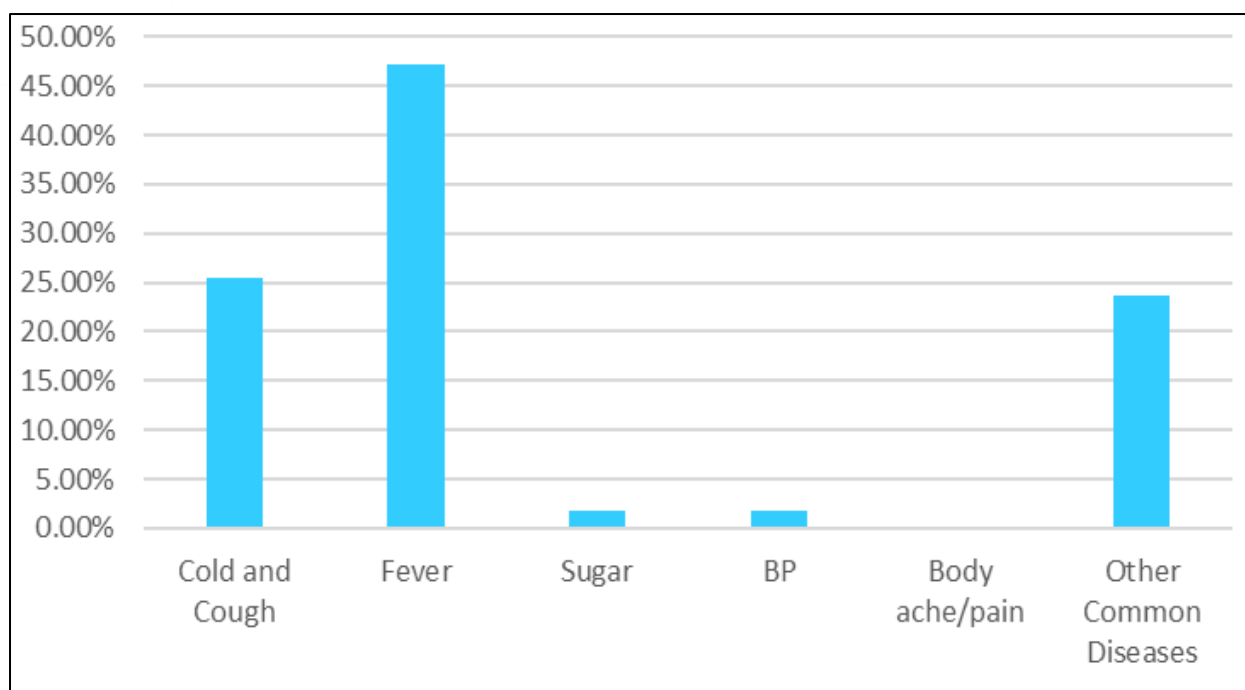

Figure 68 Comparison of Health Issues before and after MMU

5.4.10 Quantifying the Impact of MMU through Primary Research

Benefits of MMU as Perceived by Respondents

Table 27 Benefits of MMU as Recorded by Respondents

Type of Benefits	Percentage of Responses
Free Consultation from a doctor	67.85%
Free Medicine	98.54%
Free Diagnostic	39.98%
Free Dietary Plan and Supplements	45.87%
Improvement in Health	54.82%
Easy access to a medical facility	19.34%
Timely treatment	18.21%
Saved time and money	54.20%
Ability to earn more as a result of good health	16.96%
Happiness in the family	38.23%

The table indicates that free consultation from doctor is reported as benefits by 67.85% of the beneficiaries, free medicine (98.54%), free diagnostic (39.98%), improvement in health (54.82%). Apart from receiving direct benefits such as consultation, diagnosis and medicine, the MMU service has resulted in indirect benefits like saving time and money (54.20%), improvement in the ability to earn more money (16.96%) and increased happiness in the family because of good health (38.23%).

Impact Assessment of CSR Projects FY 2020-21

A graphical representation of the above data is given below.

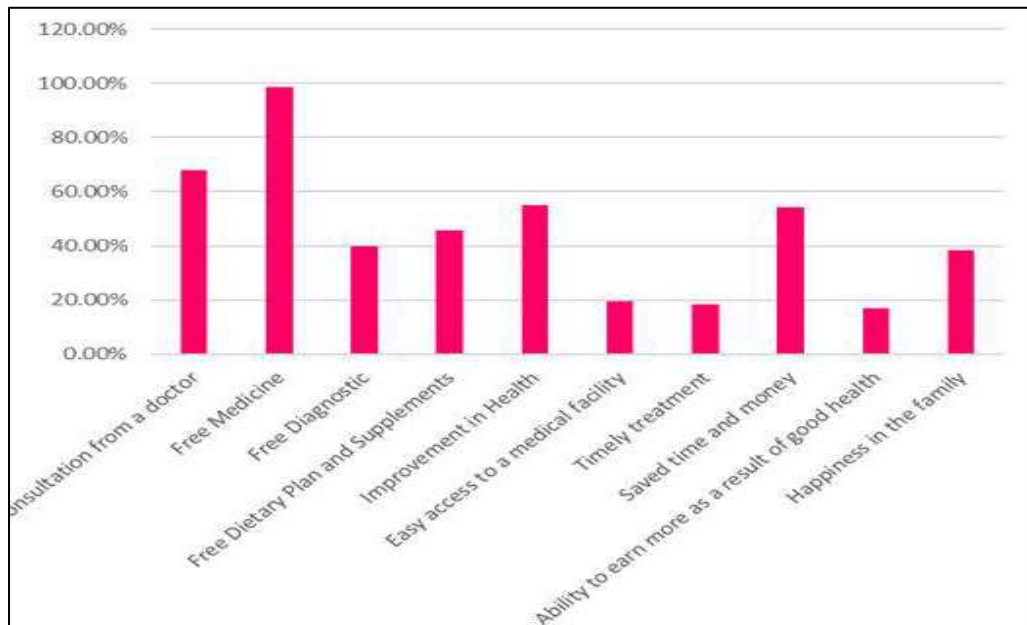

Figure 69 Benefits received by the Beneficiaries

5.4.11 Comparative Analysis of Health Disease Before and After Treatment with MMU

A comparative analysis has been drawn to quantify the impact of the MMU. The health incidences in the project area had been compared before arrival and after arrival of the Mobile Medical Unit service in the area.

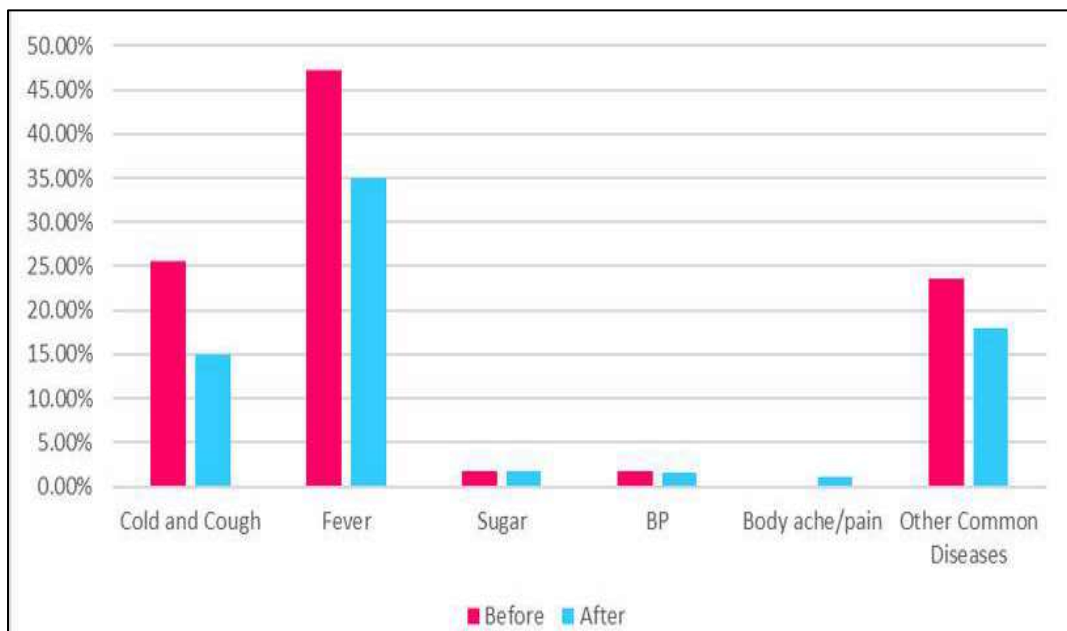

Figure 70 Health diseases Before and After the MMU

From the results it can be concluded that there has been a visible decrease in the health issues among the people of the Khirwire Wind Power Station after the commencement of the services of the MMU. The cold and cough among people decreased from 25.50% to 15%, fever incidences decreased from 47.20% to 35% and other common diseases like headache, stomachache decreased from 23.63% to 12%. The cases of sugar remain almost the same and a few new cases of the body ache/pain have been recorded.

5.4.12 Usefulness of the MMU Program

The beneficiaries of the MMU were asked across various sites about various outcomes and results of the initiative that they experienced. They were instructed to give a rating on a scale of very poor-poor-good-satisfactory-excellent. The following table shows the percentage-wise distribution of these ratings on different parameters of health improvement, disease control, child mortality rate, decrease in financial burden, and overall positive impact on family health.

Table 28 Rating of the MMU Program

Project Site: KWPS	No response (%)	Very poor (%)	Poor (%)	Good (%)	Satisfactory (%)	Excellent (%)
Health improvement	18.86	0.00	0.00	26.43	20.75	33.96
Disease control	13.20	1.88	0.00	24.54	32.07	28.31
Child mortality rate	13.20	1.88	0.00	22.66	32.08	30.18
Decrease in financial burden	13.20	3.77	0.00	18.88	28.31	35.84
Overall positive impact on family health	11.33	3.78	0.00	18.86	28.30	37.73

- For health improvement, 26.43 percent of beneficiaries rated the MMU service as acceptable, 20.75 percent as satisfactory, and 33.96% as exceptional. While no comments have been recorded for being poor or extremely poor, 18.86% of beneficiaries have not provided an opinion on this criterion. Overall, the majority deemed the health improvement services to be exceptional.
- Twenty-four point five-four percent of beneficiaries rated the MMU's disease-controlling services as good, while 32.07 percent rated them as satisfactory and 28.31 percent as exceptional. While no one has reported it as poor, 1.88 percent has reported it as very poor. And 13.20% have not commented on the criteria. Overall, the recipients were pleased with the disease prevention services.
- 22.66 percent of the beneficiaries rated the child mortality reduction services as acceptable, 32.08 percent as satisfactory, and 30.18 percent as excellent. While no one has rated the quality of the services as low, 1.88 percent of recipients have rated them as extremely poor, and 13.2 percent have not commented on this criterion. Overall, the MMU services have been effective in lowering the infant death rate.

Impact Assessment of CSR Projects FY 2020-21

- 18.88% of the beneficiaries rated the MMU services as good in terms of reducing the financial burden, given that the MMU services provide free treatment to the beneficiaries; 28.31% of the beneficiaries rated the services as satisfactory; and 35.84% of the beneficiaries rated the MMU services as excellent in terms of reducing the financial burden. 3.77 percent of the recipients deemed it to be very poor, whereas 13.20 percent of the beneficiaries did not express an opinion regarding the criterion. Overall, the services have been outstanding in terms of alleviating financial pressure.
- 18.86% of the beneficiaries felt that the MMU service had a beneficial impact on the family as a whole, while 28.30% felt it was satisfactory and 37.73% thought it was exceptional. While 3.87 percent of the beneficiaries rated it as very poor, 11.33 percent of the beneficiaries did not express an opinion about the category. Beneficiaries have viewed the programmes as having an outstanding, favorable impact on family health.

5.4.13 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 29 Observations and Inputs of the Program

Key observations	Impacts of the Project	Suggestions for Improvement
The MMU visits in two villages in Ahmednagar. The MMU goes once a week in both the villages.	The people living in the remote villages are able to access free medical facilities at their doorsteps.	The MMU should visit each village twice a week of six times in a month.
The MMU is equipped for common testing equipment such as B.P. Testing, thermometer, sugar test etc.	The patients are availing basic medical testing near to their place of residence.	-
In 2020-21, a total of 11,628 beneficiaries got benefitted from the Mobile Medical Units.	More than 90% of the population of both the villages are availing the facility of MMU.	-
Medicines are available free of cost to the patients visiting the MMU.	People from financially weaker sections of the society does not face burden to pay for basic healthcare facilities.	The facilities of the MMU should be extended to non-project areas to extent basic healthcare facilities to the people.
The number of women availing the facilities of the	Women are able to feel secure enough to go out and seek medical	There should be a provision of a lady

Impact Assessment of CSR Projects FY 2020-21

MMU is more than men. Earlier women avoided going to the clinics due to their distance and high cost, but with MMU they feel at ease and seek their services.	treatment without any cost.	doctor all the time in the MMU for the female patients.
Elderly people are visiting the MMU for their regular treatments.	Elderly people who were not keen on going to hospitals earlier are coming for regular medications through MMU.	-

5.4.14 Feedback from the Beneficiaries

Positive feedback	Suggestive feedback
The doctors and the staff in the team are very nice and helpful. They talk with respect to every patient.	A lot of ladies seek medical attention from the MMU. There should be a lady doctor in the van during the visit.

5.4.15 Assessing the Impact (OECD)

Table 30 Assessing the Impact of the Initiative

Parameter	Scale	Description
Relevance	High	The primary healthcare facilities were far away from the villages and there was a need for the healthcare services for the locals. The people living in the project affected areas were not able to avail primary healthcare services either due to bad service or it being at an inaccessible distance.
Effectiveness	High	- The MMU is able to provide primary healthcare services to the people living in the remote areas in villages of project affected areas. - People from all age groups are availing facilities provided by the MMU. - People do not hesitate to take services from the MMU due to the good and friendly nature of the doctors and paramedics towards them. - People who used to ignore common ailments of sickness to avoid going to the hospitals are also taking services from the MMU.

Impact Assessment of CSR Projects FY 2020-21

Parameter	Scale	Description
		The people were able to have timely diagnosis and medicines for their health issues.
Impact	High	- Approx. 20,000 people were able to avail healthcare services through the MMU in the project affected areas. - The beneficiaries were able to avail healthcare facilities without a financial burden and within their reach. - People start seeking medical attention for common ailments which were earlier ignored by them. - Those women who do not used to have doctor's check-up due to distance from the healthcare facilities also started seeking medical facilities from the MMU. So not only MMU provides medicines to the women but also empowered them. Now the number of women seeking attention from the MMU in KWPP is more than the male beneficiaries.
Coherence	High	- This initiative is a part of the "National Health Mission" by the Government of India. - The initiative by SJVN align with the national CSR theme of school education and healthcare and with the Sustainable Development Goal-3 (SDG 3) i.e., health and well-being. Apart from that, MMU also aligns with various policies by the government.
Efficiency	High	The initiative is efficient in its approach to reach the locals and is than 1600 patients had been threated through the MMU daily.
Sustainability	High	- Once a patient connects with an MMU service, they get a MMU service card through which they can avail services from the MMU for a lifetime - Patients have been getting services from the MMU as long as 6-7 years. - This program is sustainable in its approach as it adapts with other programs also to deliver the best results and can be sustained for a long period of time.

5.4.16 Average Rating of the MMU Service by Beneficiaries

Review of programs and services is important since it helps understand the needs of the beneficiaries better and improvise the initiatives accordingly. In each of the project sites the beneficiaries were asked to give a rating of MMU services on a scale of 5. The rating of KWPS is provided in the following diagram.

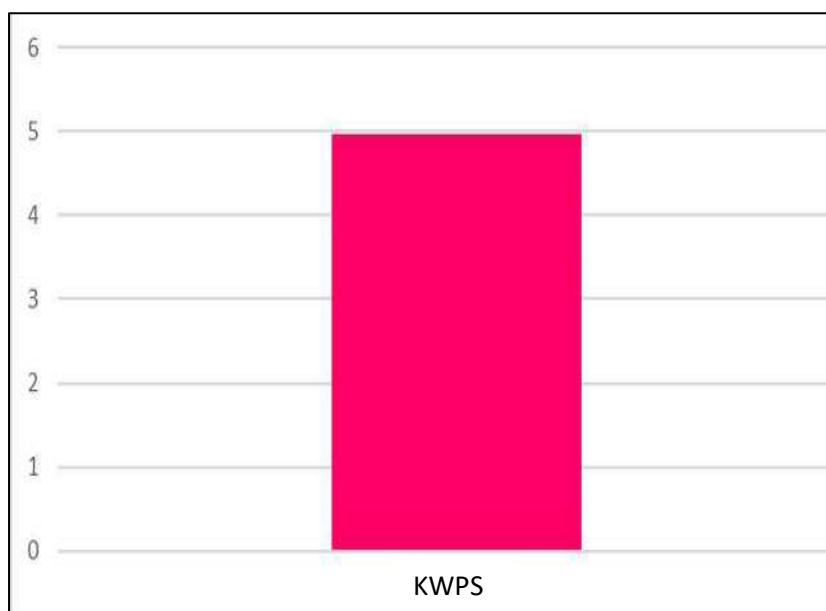

Figure 71 Rating of the MMU

In KWPS an average rating of 4.97 on a scale of 5 is provided to the MMU facilities by the beneficiaries.

5.2.17 Overall Conclusion and Way Forward

As a result of the beneficiaries' access to free healthcare services, the prevalence of health problems has decreased since the introduction of mobile health services. Patients are generally pleased with the medical evaluation, medications, and routine checkups and treatment they receive. As mentioned, people want a female doctor in the van during consultations since the number of female beneficiaries is greater than the number of male beneficiaries and they may like to share specific information with the female doctor alone.

Chapter-6 CSR Project 5- CONSTRUCTION OF KANYA CHHATRAWAS AT DHUDHIA BABA SANYAS ASHRAM

CSR Project Details	
Project Executioner:	SJVN Foundation
Starting Year:	2017
Completion Year:	2020
States:	Uttarakhand
Activities:	Financial support to Sh. Dhudhia Baba Sanyas Ashram, for construction of Chhatrawas Bhawan
Total Expenditure:	INR 185.00 Lakh

Figure 72 Glimpse of Dhudhiya baba Girls Hostel

6.1 About Kanya Chhatrawas at Dhudhia Baba Sanyas Ashram

AIM: To provide such children with a future where they can be part of society and contribute to the nation as law abiding citizen of India.

PURPOSE: To provide a safe environment for the girl child for growth, nurturing and studies.

Seva Prakalp Sansthan started a project at Rudrapur for the welfare and development of healthy girls whose parents suffers from leprosy. A hostel has been built named 'Dhudhia Baba Kanya Chhatrawas' which undertakes care of their education, boarding, cultural and social development to make them healthy and good citizens. All the children are healthy offspring of leprosy patients. These children are often ignored by society and treated as untouchables. This often leads to such children getting caught up in unlawful activities. The aim of the organization is to provide such children with a future where they can be part of society and contribute to the nation as law abiding citizen of India. Dhudhia Baba Sanyas Ashram in Rudrapur works for the welfare of girl children whose parents are suffering from leprosy. The Ashram is managed by the Sewa Prakalp Association.

Presently there are 238 girls in the Hostel. These girls belong to UP, Delhi, Rajasthan, Uttarakhand, MP etc. These girls' study in the schools of Rudrapur Town such as Saraswati Shishu Mandir Inter College, Balika Vidya Mandir etc. from class 1st to 12th standard. There is a Bus in the Chhatrawas for these girls. The Bus was funded by SJVN Ltd. under its CSR activities in the year 2015-16. Food, accommodation, education, medical school visits, etc. are completely free for the hostellers. The entire cost of which is borne by the Ashram. After completion of their studies some girls also go for higher studies and professional courses such as Nursing, LLB, MBA, and B. Ed to other centers of this organization at Agra, Ghaziabad, and Dehradun etc.

The Kanya Chhatrawas was started in 2011 with a single-story building. The ground floor of the hostel was already present and an additional first floor was added with the funding received from SJVN. The construction of the first floor of the girl's hostel began in 2017 and finished in 2020 with a funding of 185 lakhs received from SJVN. The first floor of the building consists of 7 rooms with a capacity of 16 beds in each room, one library, one hall, one study room, 37 washrooms and bathrooms and one computer lab. The floor is spacious with an inflow of fresh air in the premises. The girls conduct their living, studying, playing in the hostel only. Apart from that, the hostel also hosts variety of cultural programs for the girls, for their overall development.

6.2 About Leprosy

Hansen's disease (also known as leprosy) is an infection caused by slow-growing bacteria called Mycobacterium leprae. It can affect the nerves, skin, eyes, and lining of the nose (nasal mucosa). With early diagnosis and treatment, the disease can be cured. People with Hansen's disease can continue to work and lead an active life during and after treatment. Leprosy was once feared as a highly contagious and devastating disease, but now we know it doesn't spread easily and treatment is very effective. However, if left untreated, the nerve damage can result in crippling of hands and feet, paralysis, and blindness.

6.3 Purpose behind Starting the Hostel

Leprosy patients were often faced with the social discrimination by the people. Not only the patients but their family members were often deemed untouchable by the society and they have to face a lot of social discrimination. The Sanyas Ashram started this initiative to remove the social stigma associated with the disease and to provide a good life to the children of such parents. The hostel ensures all the provisions like skill development training, playground, and mess facilities to the females. Quality food is provided to girls so that their demand of nutrition is met.

The hostel has a spacious play ground where girls play badminton, volley ball and traditional games. It organizes various entertainments provisions such as dance cultural program, T.V show and theatre plays. During summer and winter vacations hostel authority organizes visits to various places such as Jim Corbett National Park and training program on vocational courses related to agriculture and soap making.

All safety measures are ensured with 24 hours guard vigilance, female warden to take care of the student and transport facilities.

Figure 73 Details of the CSR Initiative of SJVN

6.4 Funding Details at a Glance

The Expenditure (in Lacs) for the year 2017 to 2019 for Construction of Dhudhia Baba Sanyas Ashram, Rudrapur is Rs. 185 Lacs.

6.5 Infrastructure Details of the Girls Hostel

Table 31 Infrastructure of the Girls Hostel

Facilities in the first floor of the girl's hostel built with the financial support of SJVN	YES/NO	Nos.
Computer labs	Yes	1
Library	Yes	1
Study room	Yes	1
Prayer hall	Yes	1

6.6 Socio Economic Profile of Beneficiaries

Girls have their accommodation on the first floor of the hostel constructed with funding by SJVN. Students were admitted in the hostel from all over India and the admission criteria do not follow any social class norms.

Religion wise distribution of students of the hostel

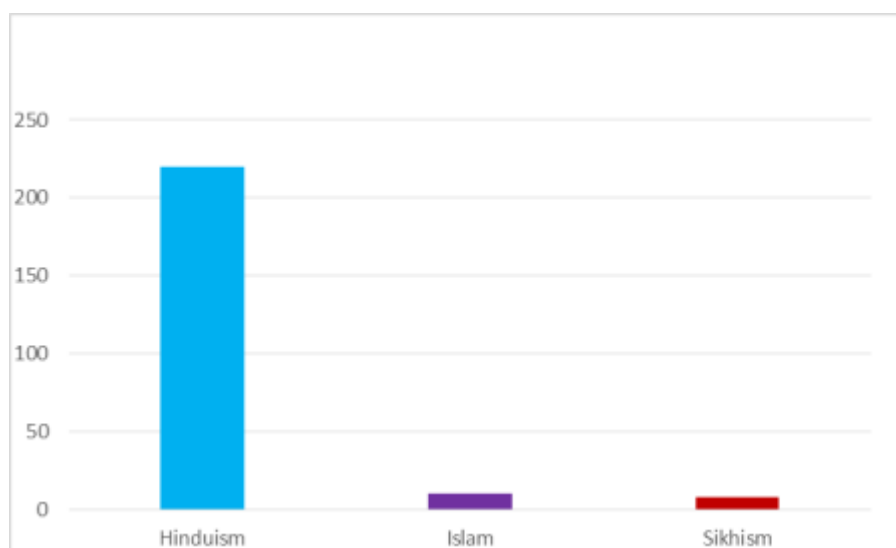

Figure 74 Religion wise distribution of students of the Girl's hostel

Majority of students in the hostel are from Hindu religion (220) and rest are from Islam and Sikh religion which comprises 10 and 8 students respectively.

Social category wise distribution of students of the hostel

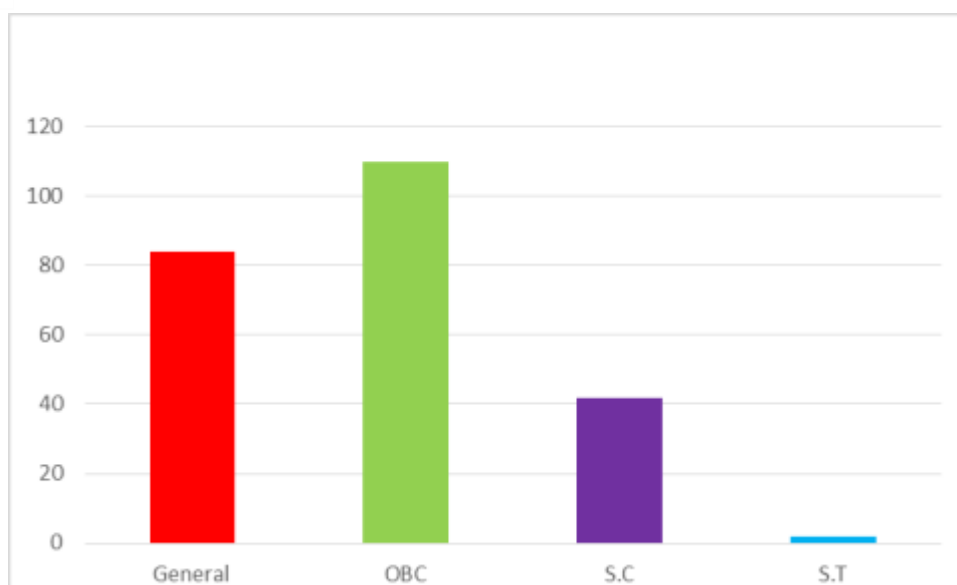

Figure 75 Social category wise distribution of students of the hostel

Majority of students in the hostel belong to OBC category (110) followed by General which are 84 students. 42 students are from SC category while only 2 students belong to ST category.

6.7 Enrolment trends in the hostel

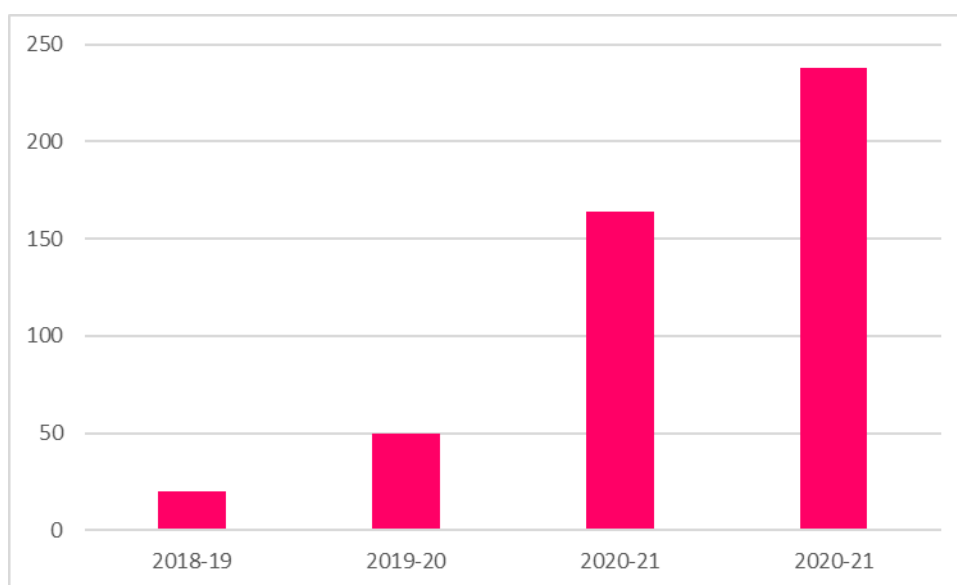

Figure 76 Enrolment trends in the Girls Hostel

The enrollment of the students in the Kanya Chhatrawas grew over the years. In the beginning there were only 14 girls from financially weaker section of the society. After the construction of first floor of the hostel that is funded by SJVN Foundation which ultimately increased its accommodation capacity to 238 students. With the proper facilities and security measures its popularity increased as a result many students started taking admissions. The hostel administrators

every requirement of the students by providing computer labs, library, prayer room playground and transportation facilities.

Figure 77 Daily meditation activity being performed in the Girls Hostel

6.8 Measures for overall development of the girls

Daily Routine work: The Girls get up at 5 A.M in the morning. One hour was given for bathing and morning prayers followed by breakfast and departure for schools. The girls have a spacious playground in their hostel where they can play any kind of games and have various things like badminton, volley ball etc. available to them.

Schooling of the Girls: The girls living in the hostel are from nursery to class 12th. They are admitted in the following schools by the management committee:

- Guru Nanak Inter college Saraswati Shisu Vidya Mandir
- Balika Vidya Mandir Junior High school

Safety Measures: Guards were appointed for 24 hours, constructed durable safety wall around the Hostel, for caring of hostel girls two female warden has been appointed who live with the Girls hostel every time and care and watching them every day. There is Van in the Hostel which drop and take up the girls from the school.

Emergency Provision for Hostel Girls: Health safety is necessary for the girls. So, for the emergency time hostel have van and Driver. They have their own van and Drivers. Hospital is just near the Hostel. During the emergency hostel warden call the driver and he took the patient girl and admit immediately the in the hospital. First aid medicine is available in the Hostel. For caring of hostel girls two hostel female warder has been appointed who live with them every time. The female warden remained careful about the health and other physical problems of the hostel's girls and gives them proper necessary advice help, guidance and assistant timely.

Entertainment Provision for the Hostel's Girls: There is a TV in the hostel where the girls can sit together can watch Ramayana, Mahabharata and religious films. Hostel has own library where girls can read story books. There is also spacious hall where girls learn classical dance and practice the dance and music teacher is appointed on voluntary bases that comes once a week.

Training Program for the Girls Hostel: During the summer and winter vacation Agriculture experts come from Pant Nagar Agriculture University in girls Hostel and give girls Agriculture related the training like; how to grow hybrid vegetables, Mushroom cultivation, Animal husbandry, horticulture and kitchen gardening etc. Some female experts train to make daily use items like: homemade soaps.

6.9 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 32 Key Observation and Inputs for Girls Hostel

Key Observations	Impacts of the Project	Suggestions for improvement
The hostel has a provision of staying for the girls from Nursery to Class 12 th . The girls are enrolled in schools for education. All their expenses for studying and staying are borne by the Ashram.	- The girl children whose parents suffer from leprosy have a place to stay where they are learning and living without facing any discrimination from society for their parents' condition. - The students are being provided formal education for a bright future. - The girls belonging to EWS category can also receive formal education.	There should be a provision of conducting activities in the premises where other students can come from outside and interact with these students.
Once the girls are admitted in the hostel at a young age, they live in the hostel till the completion of their formal education.	- The girls have a safe space to stay away from the social discrimination that they face in their villages. - Living in the girls hostel allows the girls to fully concentrate on their study which was not possible in their homes.	Sometimes, the girls should be allowed to have some recreation time outside the hostel. So that they can understand the functioning of the outside world.
Out of the total of 238 girls in the hostel, 50 live	Additional capacity to accommodate more	

Impact Assessment of CSR Projects FY 2020-21

Key Observations	Impacts of the Project	Suggestions for improvement
in the floor funded by SJVN. There are 7 rooms in the first floor of the hostel and each room contains 16 single beds for the girls.	girls in the hostel. 50 girls are admitted in the hostel after the addition of a new floor in the building.	-
For the 50 girls living on the first floor, there is a facility of 37 bathrooms and washrooms on the floor. The bathrooms and washrooms are neat and clean and there is round the clock water supply.	- The girls have access to clean and hygienic washrooms. Availability of enough bathrooms for the hostellers to use without waiting for the facility. - Girls can access clean water for usage at all times.	There should be continuous checking and cleaning of the washroom. As hygiene is one of the key components which should be kept in mind.
The building of the hostel is well ventilated, well maintained, neat and clean.	A good environment at the hostel for the girls to study, play and live.	-
The hostel consists of 7 rooms, 1 library, 37 baths and washrooms, 1 computer lab, 1 study room and 1 prayer hall.	The environment of the hostel is conducive for studies.	-
The library is equipped with all kinds of books, journals and magazines and provides a quiet environment for studies. There is also a provision of study rooms equipped with tables and benches.	- Access to studies in the hostel without getting distracted. - Access to reading material for additional knowledge.	-
The hostel consists of a computer lab and computer training is provided to girls in the hostel.	Access to digital literacy.	Students should be encouraged to participate in IT courses so that they can acquire the skills necessary to effectively use today's technology.
A pra'er hall is present in the hostel premises.	The students are learning modern as well as spiritual	-

Key Observations	Impacts of the Project	Suggestions for improvement
	lessons in the hostel.	
There is a provision of study room in the hostel that hold tuition classes for girls in the evening to provide extra support for academic studies.	The girls are improving on their academics and venture into mainstream and leave behind the social stigma attached to them.	-

6.10 Assessment of the Initiative (OECD)

Table 33 Assessment of the Initiative

Parameter	Scale	Description
Relevance	High	- This initiative was necessary to provide accommodation facilities to the girls whose parents are suffering from leprosy. - The girls belonging to weaker economic background are able to have a safe space to live, and to grow. - The building was necessary to construct a building to accommodate more girls to bring them into the mainstream and end the social discrimination.
Effectiveness	Medium	- Through this initiative 62 more girls are able to avail hostel living facilities in the premises. - The girls have opportunities to venture into the main stream with their academic qualifications, the computer course they are learning and the extra help being provided to them.
Impact	Medium	- A total of 238 girls from economically weak background with parents suffering from leprosy are able to escape the social discrimination that they had to face and venture in the mainstream. - The girls have a conducive environment in the hostel to carry out studies which will not

Parameter	Scale	Description
		be possible if they were still living in their villages as they have to help in the household chores. The girls are able to avail free education and nutritious food which might not be possible in their own household as they belonged to economically weak families.
Efficiency	Medium	The floor constructed by SJVN has space to accommodate 112 girls but only 50 girls are using it, accounting for 60.54% of the added living space.
Coherence	High	- This initiative officially begun in the year 2019-20. The annual CSR theme of the year is 'SCHOOL EDUCATION, HEALTHCARE & NUTRITION'. - This CSR initiative aligns with the government policies and strategies in the given year.
Sustainability	High	- This is a long-term program, available for individual beneficiaries from childhood till their adulthood. - The program provides living, dining and educational facilities to the girls. The organizing committee of the hostel is also expanding the horizons for the growth and development of the girls by including facilities like computer training and tuition classes for girls. - The hostel authorities have many plans (skill training) that they are going to implement for the girls in the near future. - The program is sustainable in its approach as once implemented it can go on with minimal upkeep.

6.11 Conclusion and Way Forward

This initiative, which is being carried out by Dhudhia Baba Sanyas Ashram on behalf of the female child, aims to eradicate the societal discrimination encountered by these children whose parents have leprosy. A major social stigma linked with leprosy is the concern that a person with the

disease would infect people with whom they come into contact, despite the fact that the likelihood of this occurring is exceedingly rare. The mission of this organization is to provide these girls from economically poor households with a suitable living environment and a formal education. The girls have access to every facility required to live a healthy and prosperous life; this is guaranteed. They are provided with chances, such as academic and digital information, as well as academic support, to aid the girls in entering mainstream life and professional choices. According to OECD standards, the effort has been successful, and the organization that received financing from SJVN has utilized that funding properly, achieving the greatest potential outcomes.

Chapter -7 CSR Project 6- INTEGRATED FARMING TRAINING THROUGH CSK, PALAMPUR

CSR Project Details	
Project Proponent:	SJVN
Project Executioner:	CSK Himachal Pradesh Agricultural University, Palampur
Starting Year:	2019
Completion Year:	2020
States:	Himachal Pradesh
Activities:	Farming Training
Total Expenditure:	INR. 62.51 Lac

7.1 About Integrated Farming Training through CSK, Palampur

Objective: To motivate the farmers to start their own enterprise by using modern agriculture and horticulture technologies.

Himachal Pradesh Krishi Vishvavidyalaya (renamed as Chaudhary Sarwan Kumar Himachal Pradesh Krishi Vishvavidyalaya in June, 2001) was established on 1st November, 1978. The College of Agriculture (established in May, 1966) formed the nucleus of the new farm University. It is ICAR accredited and ISO 9001:2015 certified institution. The Indian Council of Agricultural Research has ranked this University at 14th place among all farm universities of the country.

The University has been given the mandate for making provision for imparting education in agriculture and other allied branches of learning, furthering the advancement of learning and prosecution of research and undertaking extension of such sciences, especially to the rural people of Himachal Pradesh.

Over the years, this University has contributed extensively in transforming the farm scenario of Himachal Pradesh. It has developed human resources, crop varieties and technologies and transferred these to farming community enabling the State to receive the “Krishikarman award” of Govt. of India four times in row for food grain production among small states of the country. Today, the State has earned its name for hill agricultural diversification and the farming community has imposed its faith in the University.

The two organizations, CSK & SJVN Foundation, have inked a Memorandum of Understanding (MOU) for one year for Rs. 62.5 lakh under which CSK will be organizing 40 trainings at its main campus and different stations. Under the terms of the agreement, the University will provide one-week training sessions for farmers from across the state. In one year, this effort will train over 800 farmers and orchardists. The complete cost of these trainings will be covered by the SJVN Foundation

The participants will be trained on the various aspects of agriculture and horticulture including the modern technologies used in these fields. This year, the trainees will also get a chance to visit the farms of progressive farmers so that they can acquire firsthand experience and get motivated to start their own ventures.

In the year 2019-2020, the financial implications for the training were Rs. 62.5 lakhs through which 32 training programs had been conducted at various locations in and around Palampur. Out of 32, a total of 18 trainings were conducted in the headquarters of the institute and the remaining 14 programs were conducted in various locations like – Mandi, Kullu, Kangra, Bilaspur, Hamirpur, Sirmour etc. In 2019-20, 759 farmers had been trained. The training program had been conducted over a period of 6 days in each of the workshops. The training program module includes training and knowledge from basics to advance. Here is a sample of the training module followed in the program.

The 6-day workshop has covered all the aspects on vegetable and fruit farming along with animal rearing. The program is a high-quality integrated training program designed and conducted by the Krishi Vidyalaya, Palampur.

Figure 78 Attending Workshop

7.2 Funding Details at a Glance

The Expenditure for Palampur training in the year of 2020-21 is ₹62.5 Lacs.

7.3 District Wise List of Total Trainees

Table 34 District Wise List of Total Trainees

S. No.	Name of Districts	No. of trainees
1.	Una	50
2.	Kullu	90
3.	Hamirpur	99
4.	Bilashpur	50
5.	Shimla	91
6.	Chamba	178
7.	Kangra	77
8.	Mandi	39
9.	Kinnaur	26
10.	Sirmour	49
Total		749

7.4 Socio-Economic Profile of Beneficiaries

Gender and Religion of Beneficiaries

Females comprise the major part in the list of the beneficiaries with 66.20%. It is concluded from the figure 79 that majority of women participated in this training in order to empower themselves.

Figure 79 Gender of Beneficiaries

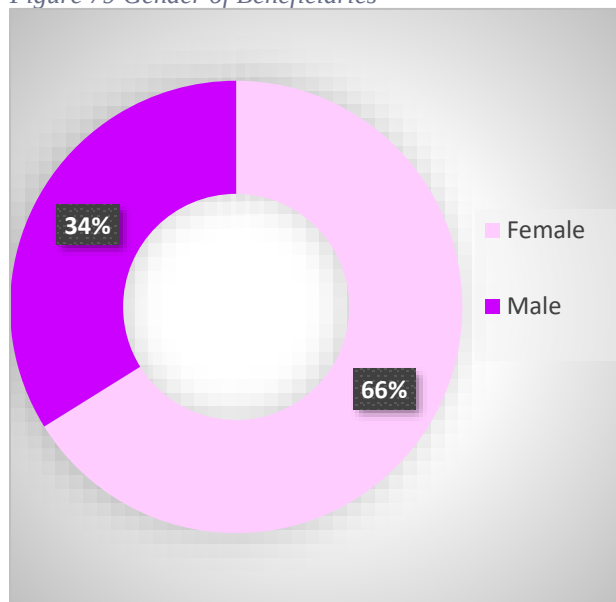

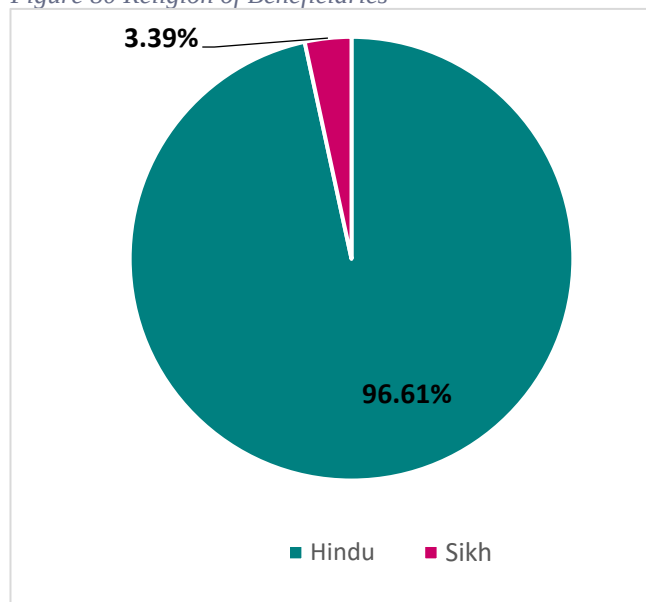

Figure 80 Religion of Beneficiaries

The 96.61% of beneficiaries are from Hindu religion and rest from Sikh religion which comprises 3.39% as shown in Figure 80.

Social Class and Annual income of Beneficiaries

About half of the beneficiaries belong to general category (52%), followed by OBC (22.03%), SC (24.28%) and ST (1.69%) as depicted in figure 81.

The annual income of majority (61.90%) of beneficiaries is less than Rs. 50,000 and between Rs. 50,000 to Rs. 1,00,000 is 38.10% as illustrated in figure 82.

Economically weak section of society is getting trained through this training program in order to become self-sufficient.

Figure 81 Social Category of Beneficiaries

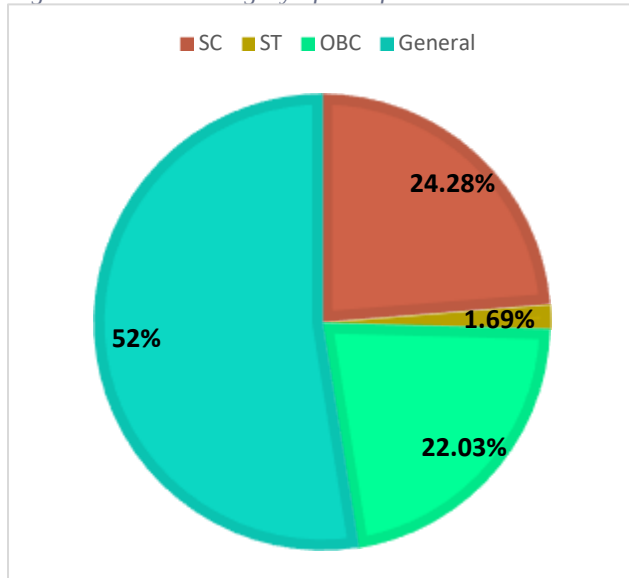

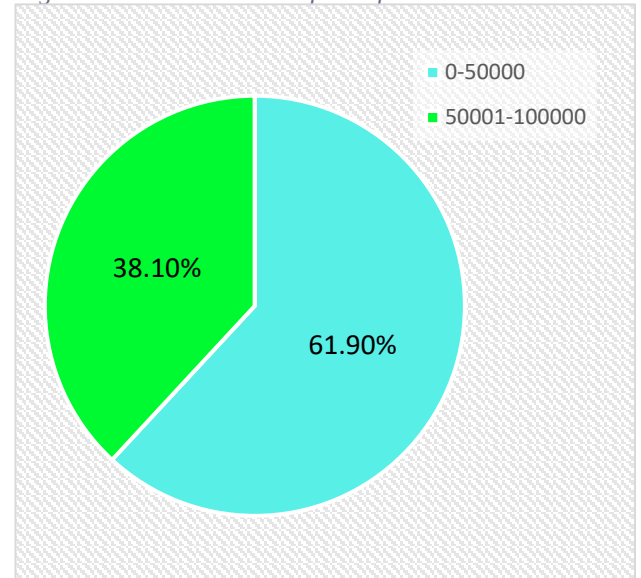

Figure 82 Annual Income of Beneficiaries

Educational Qualification of Beneficiaries

As illustrated in the figure below 12th pass outs are 32.20%, people who have studied till matriculation are 23.73% while graduates and postgraduates are 20.34% and 6.78% respectively.

Figure 83 Educational Qualification of Beneficiaries

7.5 Observations and Impacts

The key observations and corresponding impacts and suggestions for improvement are given in the table below.

Table 35 Observations and Impacts

Key observations	Impacts of the program	Suggestions for improvement
The training has been provided to farmers across the state.	Farmers belonging to low-income group got to learn about modern methods and techniques of farming and animal rearing for free.	With new modern technological advances in agriculture, the Farmers should be kept in the loop to learn these new developments.
The program covers all aspects of vegetable/fruit cultivation and animal rearing with techniques to increase their yield and earn more profit.	The farmers got to know about the advance techniques and have problems solved for issues like income generation through a job, and increase in yield of crop.	-
In the year 2019-20, a total of 749 beneficiaries have been benefitted through the program.	Farmers got hands on experience to improve their skills and techniques through the training	-
Beneficiaries were taken on a trip to agricultural college and given practical knowledge for a lot of modern equipment.	The beneficiaries got hands-on skills and experience of modern farming methods and equipment's.	A few small equipment should be provided to the farmers

7.6 Feedback from Beneficiaries

Positive feedback	Suggestive feedback
- The training is really good and helpful for us. - Got to learn a lot about the modern equipment's that can be used in farming.	Some small equipment's should be provided after the training.

7.7 Effectiveness of training programme as perceived by the beneficiaries

The effectiveness of the training among the farmers is measured based on various parameters such as an increase in skill level and expertise, increase in self-confidence and managing abilities, increase in efficiency and an overall personality development. The parameters have been rated based on the perception of the beneficiaries on the various parameters. The rating for the same is provided below in the diagram.

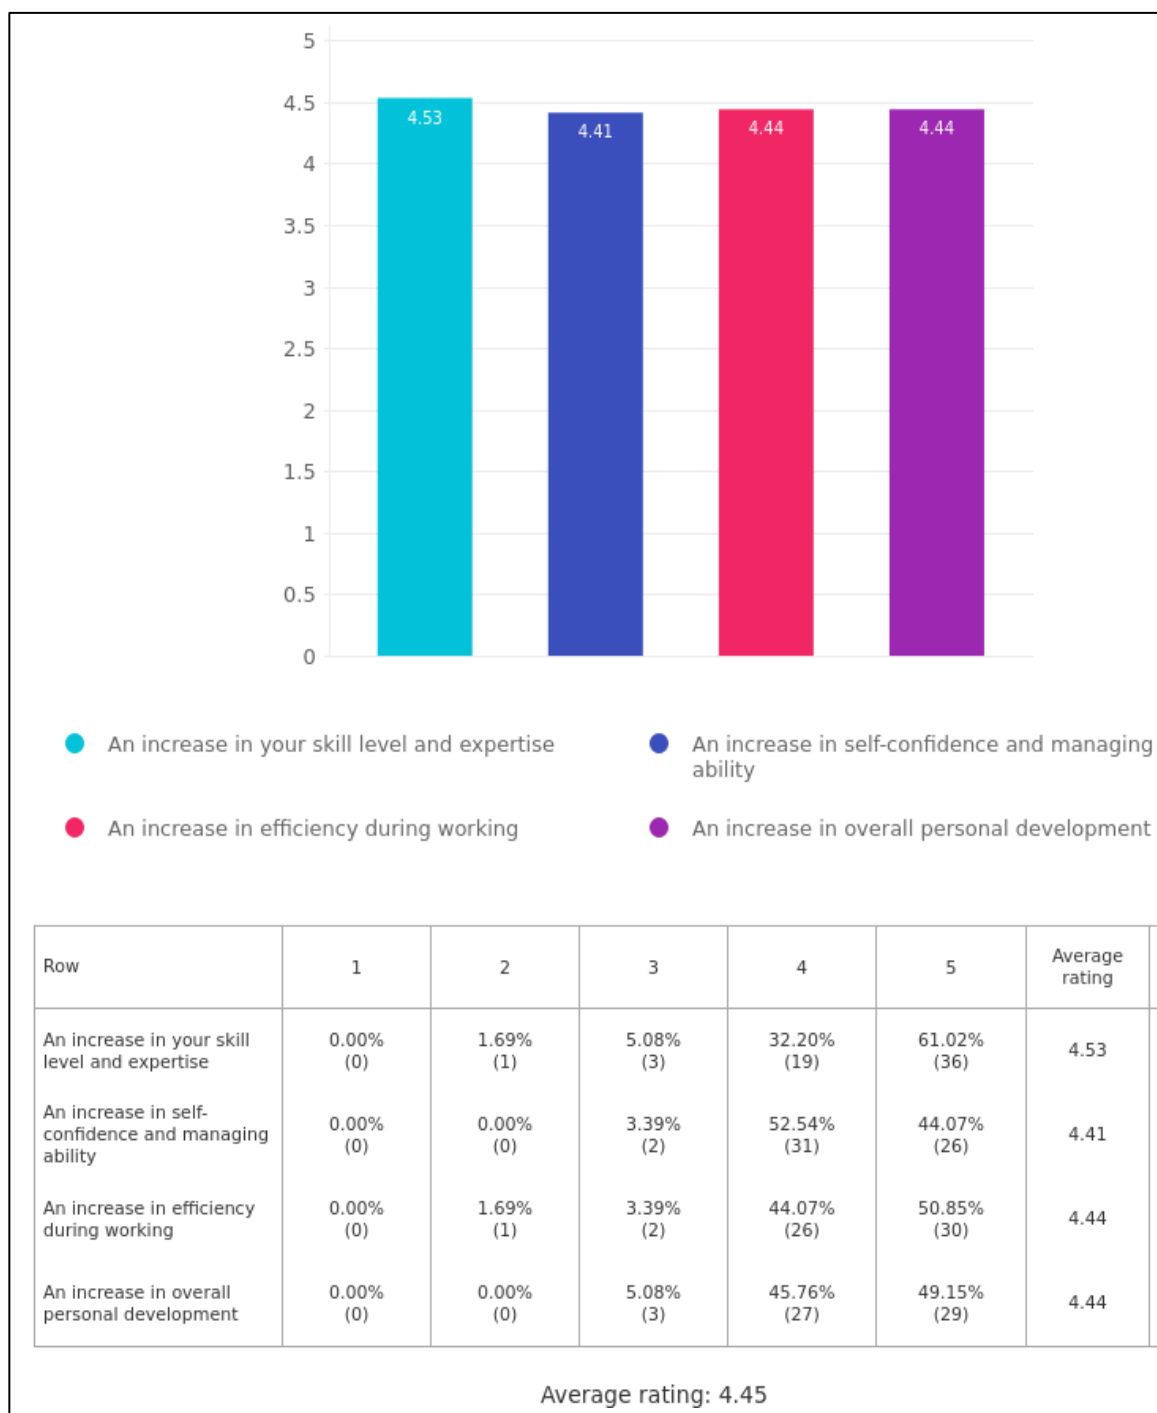

Figure 84 Impact of the training programme

Impact Assessment of CSR Projects FY 2020-21

It can be observed that the farmers have rated the program based on the different parameters and their understanding. The farmers felt an increase in skill level and expertise with the received training. An average rating of 4.53 on a scale of 1-5 has been provided to this parameter. An increase in self-confidence and managing abilities has got an average rating of 4.41 of out of 5. An increase in efficiency during working has gathered an average rating of 4.44 among the farmers. An increase in overall personality development has been given a rating of 4.44 by the farmers. An average rating of 4.45 has been provided to the training program by the beneficiaries on a 5.0 scale.

Rating of the Programme

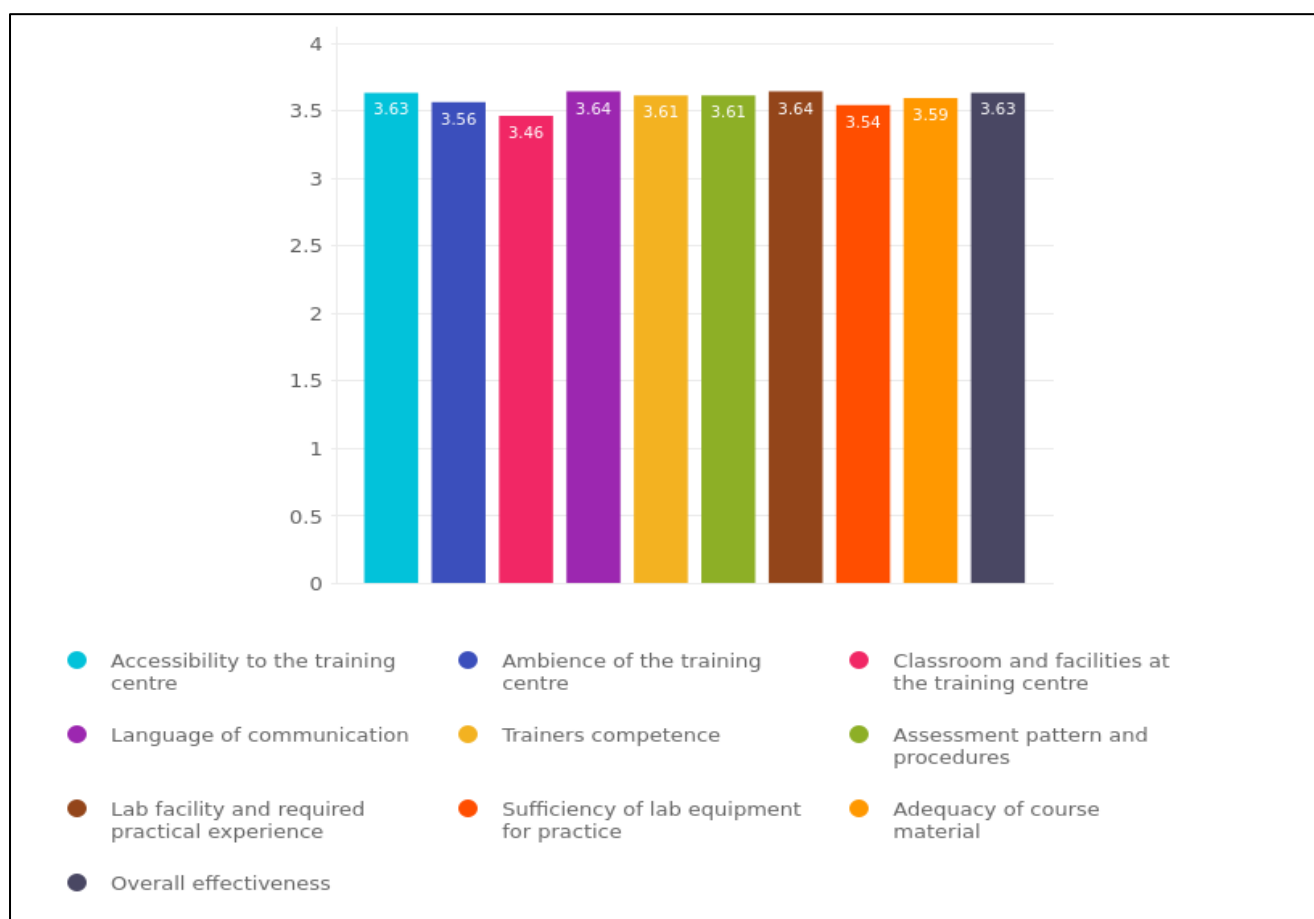

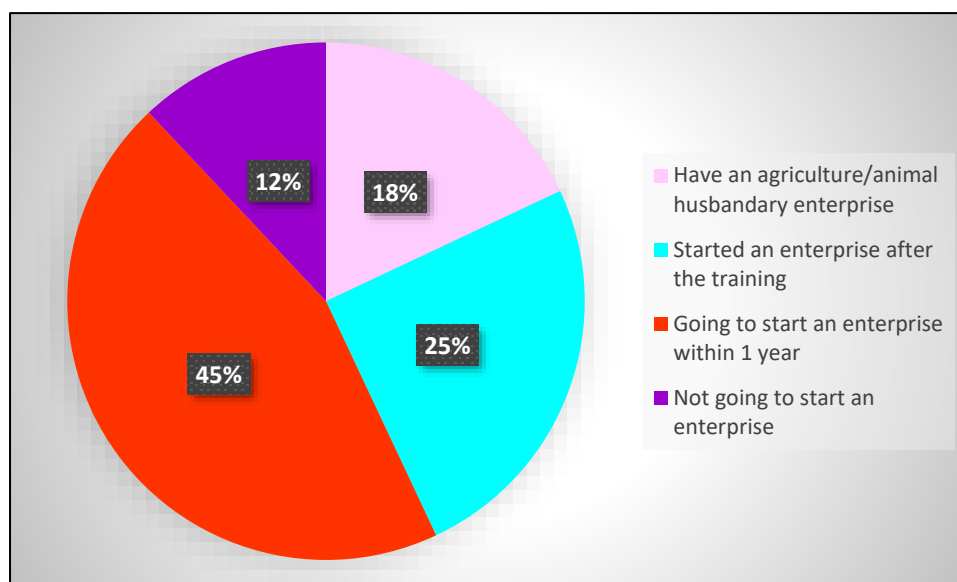

Figure 85 Rating of the training Program

The figure above depicts the rating given by the beneficiaries in the training program based on different aspects of the training. The training centers were accessible to the farmers and hence a rating of 3.63 on a 5.0 scale has been provided to the parameter. The ambience of the training center has been given a rating of 3.56 by the farmers. The classrooms and the facilities at the training center has been given a rating of 3.46. Language of communication in the training center is easily understandable by the framers and hence was given a rating of 3.64. The trainer's competence based on the farmer's perception has been given a rating of 3.61. The assessment patterns and procedures of the training center were given a rating of 3.61 by the farmers. The lab facility and the

practical experiences had been rated 3.64 by the farmers. Sufficiency of lab equipment for practice had got a rating of 3.54. The adequacy of course material has been rated 3.59 and the overall effectiveness is rated 3.63. An average rating of the program based on all different parameters is 3.6.

7.8 Impact of Program

In this section, the impact of the program is measured through the achievement of the objective of the program which was to motivate the farmers to start their own enterprise by using modern agriculture and horticulture technologies.

Figure 86 Impact of the training program

The above diagram presents the impact of the agricultural training on the trainees. It was observed that 18% of the trainees already had an enterprise and they attended the training to upgrade themselves. A massive 25% of the beneficiaries reported that they have started some sort of business related to the training they received after getting knowledge and motivation from it. A huge 45% of the beneficiaries are inspired by the training and are thinking of starting their enterprise within one year. And lastly, 12% reported that they don't have any plans to start an enterprise.

It can be observed that the program has an affectivity ratio of 1:4, which is massive to inculcate a change in their thought process and behavior.

Figure 87 Program coordinators and Farmers involved in the Training

7.9 Assessment of the Initiative (OECD)

Table 36 Assessment of the Initiative

Parameter	Scale	Description
Relevance	High	With climate changes changing the direction of agriculture sector, there was an immense need to update farmers' practices. About 65% of the Indian's are engaged in farming and agricultural sector provides 5% in the GDP of the economy. There was a need to bridge the gap between the percentage and agriculture produce.
Effectiveness	High	The training had been effective in imparting theoretical and practical knowledge to the farmers.
Impact	High	The farmers are updated with the current modern techniques of farming with methods to improve the yields of the farmland.
Efficiency	High	The farmers were able to use the modern farming equipment. Everyone who has attended the training session has been engaged in farming.
Coherence	High	This program aligns with various national and international policies. The initiative also aligns with

Impact Assessment of CSR Projects FY 2020-21

Parameter	Scale	Description
		SDG goals of 'No poverty' and 'Zero hunger'.
Sustainability	High	The program is sustainable in its approach as the knowledge and skills imparted to the farmers are always going to be visible in their farming techniques. Apart from that, the program has already been implemented for a few years and has been benefitting people since, so the program is sustainable in its approach.

7.10 Conclusion and way forward

The training is an integrated training program which aspects of modern methods, technologies, practices and programs. The training is only provided for 6 days to a group of people yet it had a large impact on the minds and behavior of the beneficiaries that they either started or started thinking of starting their own venture in the related field. Overall, the program is well designed and efficient in its approach.

OVERALL CONCLUSION AND WAY FORWARD

The CSR initiative undertaken by SJVN, completed in the year 2020-21 had been successful in their approach to fulfill the needs of the beneficiaries and to satisfy them. The CSR programs costing more than Rs. 50 lakhs completed in the year 2020-21 had been a hit among the people. In this report, the following initiatives had been covered:

- Running of Mobile Medical Unit at RHPS, BTPP (MMU-1), BTPP (MMU-2) & KWPS.
- Financial assistance for construction of ‘Kanya Chhatrawas’ in Dhudhia Baba Sanyas Ashram for girl child at Rudrapur, Uttarakhand.
- Farmer training through CSK Palampur for farmers of Himachal Pradesh on various farming techniques.

The **Mobile Medical Unit** is a flagship program by SJVN. This program has been observed at four project sites of RHPS, BTPP (MMU-1), BTPP (MMU-2) and KWPS. The areas have been assessed on the availability and accessibility of primary and secondary health infrastructure in the area, which was found to be lacking. The mobile medical unit was successful in its initiative to reach the remote area and provide medical facilities to the poorest of the poor. Through the MMU people were able to avail free consultation, medicines and treatment. The service not only provided people with medicine but also confidence to various sections of society such as women, senior citizens to seek medical attention and not to shy away due to great distances or expenses. During the year the MMU services has treated approximately 1 lac beneficiaries in the project areas. Apart from that, the MMU had been successful in preventing the outbreak of diseases such as dengue in the rainy season at various locations. The provision of MMU has gained goodwill for SJVN among the people and touching the lives of needy and poor persons at their doorsteps free of cost.

SJVN provided financial assistance for the construction of a floor of girl’s hostel **at Dhudhia Baba Sanyas Ashram**. The organization fulfilled its duty towards infrastructure and community development, education and healthcare, bringing equality and social justice all in one, through this initiative. The organization has been a part of providing a safe place for growth and development of girl child whose parents were suffering from leprosy. The initiative helped in removing the social stigma towards the children of such parents and provided them opportunities to grow in life through better upbringing and opportunities to venture into mainstream. The SJVN funded building is well constructed and spacious for all the girls living in the hostel and proved instrumental for studies as well as growth and development for the children.

The **integrated farmer training** provided by the Chaudhary Sarwan Krishi Vishvavidyalaya) to the farmers of Himachal Pradesh had been of great value to them. The initiative had shown a substantial growth of the people engaged in farming, agriculture, horticulture. The training directly and indirectly addressed the issues of farmers such as low yield, climate change, generating income source and upgrading the methods used previously. The farmers had been provided an opportunity to learn various tools and techniques to grow in life without having to pay for it. The training had been very successful among the trainees and they wish to keep upgrading themselves through these initiatives.

Impact Assessment of CSR Projects FY 2020-21

Overall, we can conclude that the projects have been successful in fulfilling their objectives. The Mobile Medical Unit was reaching to the remote areas and was providing facilities to the poorest of the poor. The Dhudhia Baba Sanyas Ashram is successful in providing a safe environment to the girl's child of the parents suffering from Leprosy. The girls have a safe place to study and lead a good life. The integrated farming training has provided skills to the farmers in modern methods of farming and animal rearing. The program is successful in its initiative to impart skill, instill a behavior change among the farmers and motivate them to start an enterprise. SJVN's CSR initiatives had been bringing substantial changes in the lives of people and have unquestionably generated goodwill among the people.

SUCCESS STORY-1

MEDICAL MOBILE UNIT - RAMPUR

Name: Sheela Devi

Age: 82

Sex: Female

Address: Village Koel, Gadej Panchayat (H.P.)

Under treatment for: Asthama

Ms. Sheela Devi lives with her husband in Koel village. Her husband is the only breadwinner in the family; he farms and performs manual labour. Six years ago, Ms. Sheela Devi was diagnosed with asthma. She was unable to attend hospitals due to their remote location and her lack of assistance or resources to visit them at her advanced age. She had been on and off drugs for two years due to the high cost of private hospitals and pharmaceuticals.

In 2019, she registered at SJVN MMU-Rampur after learning about the organization's free medical checkups. Sheela Devi can now utilise the Mobile Medical Unit's amenities twice per month after registering with the unit. She has been receiving services from the Mobile Medical Unit for the past four years and is now able to breathe easily and perform her daily tasks. She is quite satisfied with the services and considers the arrival of MMU to be nothing short of a miracle in her life.

She is now at a point in her life where she can rest without worrying about the cost of her medications, and she is ecstatic about this.

SUCCESS STORY-2

MEDICAL MOBILE UNIT - BANARPUR

Name: Suneel Thakur

Age: 60

Sex: Female

Address: Village Banarpur, Chuasa Panchayat (Bihar)

Under treatment for: Diabetes & Cataract

In Banarpur village, Mr. Suneel Thakur resides in a five-member joint family. The family's annual income ranges from 60,000 to 80,000 rupees. The single breadwinner in the household is a barber who works in a saloon. He had been afflicted with diabetes and cataracts for an extended period of time and had trouble functioning at night. Treatments were inaccessible to him because government facilities are located far from his house and private hospitals are unaffordable for his family.

In 2018, he registered with the SJVN MMU-Banarpur, Buxar-1 after learning about the organization's free medical examinations. Suneel Thakur can now utilise the Mobile Medical Unit's services every week after registering with the organisation. Since he began receiving care from the Mobile Medical Unit four years ago, his blood sugar has been under control. At a specialised health camp, the MMU also gave Suneel Thakur with an eye checkup. The doctors discovered a cataract in the patient's left eye and recommended him to the Sadar hospital for surgery, with HelpAge India covering the cost of the trip and the surgery.

Now that Suneel Thakur can see clearly, he is quite satisfied with the services he received from the specialist health camp and MMU.

SUCCESS STORY-3

MEDICAL MOBILE UNIT - AHMEDNAGAR

Name: Mr. SaduTukaramDarade

Age: 45 Years

Sex: Male

Address: Kombhalne, Tal- Akole, Distt- Ahmednagar

Mr. Sadu Darade is a security guard at Gameshapvt. in the state of Maharashtra. He resides in a nuclear family. He is a father of two kids. One of them is currently working for the company Gamesha Pvt. Ltd. Other son is currently pursuing his education. Over the course of ten years, he endured the discomfort of his joints as well as back pain; but, due to the expensive expenses of private hospitals in the area, he was unable to receive treatment that was successful.

It's been seven years since his son first told him about the MMU and got him registered to go. He has been a frequent visitor to the Help Age India MMU, which receives funding from the SJVN. After seven years of receiving treatment, he did not have any kind of pain. He cannot express how satisfied he is with MMU's services. His frequent trips to MMU have become into a routine for him. During the COVID-19 Lockdown, he is extremely thankful to SJVN and HelpAge India for supplying him with this free medical service and enabling him to access medication. Our Medical and Behavioral Unit (MMU) has provided him and his family with medication. He recommended that all of his family members should get their medication from the MMU.

SUCCESS STORY-4

FARMING TRAINING - PALAMPUR

Name: Ms. Veena Kumari

Age: 38 years

Sex: Female

Location: Abada Barana

Ms. Veena Kumari is a small-scale farmer who supports her family and all of her expenses through agriculture. She is interested in traditional farming practises and lacks a formal education. To provide for her family, she laboured arduously in the fields. Despite her best efforts, her farmland did not produce as much as she had anticipated.

She received training in integrated agriculture the previous year, when she learned about current farming techniques and the best sowing practises. Training enabled her to discover the most effective natural and synthetic fertilisers. Additionally, she had practised farming in her fields this year, resulting in an increase in crop yield.

Her response is really optimistic. She is really appreciative to the SJVN CSR programme for providing her with the chance to learn about new technology and increase her crop. According to her, this training has empowered her, as she is now capable to farming on her own with the assistance of the offered knowledge, rather than asking others about every other problem/relevant approach she encounters in her fields.

SUCCESS STORY-5

GIRLS HOSTEL- DHUDHIYA BABA, RUDRAPUR

Name: Ms. Kajal

Age: 15years

Sex: Female

Location: Rudrapur, Uttarakhand

Kumari Kajal class 10th student has scored 20th rank in the State of Uttarakhand

Kumari Kajal, who lives with her sister in Dudhiya Baba Girls Hostel, has secured 25th rank in the entire Uttarakhand examination board with 93.80%. Out of 500 she secured 469 marks. Kumari Kajal hails from Bihar. Her mother Rinki Devi is suffering from leprosy and father Mr. ArjunYadav is a poor farmer. She has been living in this girls' hostel since last 10 years. Kajal states that after completing her education with high grades, she intends to become a physician and serve the underprivileged.

During her time in the ashram, she gained a good outlook on life and the motivation to fight, she added. She had the opportunity to study effectively in the hostel's comfortable environment. "If we lived with our parents, our minds would become overwhelmed by the stresses of society, and we wouldn't have the chance to achieve any of this. Kajal stated, "Therefore, I am really grateful to the Dhudhia Baba Management Committee for giving free housing, food, clothing, and an excellent educational atmosphere to all girls like myself."
